The value of all metals produced amounted to \$1,359,000,000 compared with \$1,130,000,000 in 1958. Uranium retained first place among them with a value of over \$324,000,000 and nickel second place with a value of \$257,000,000. An increase in both tonnage and price brought the value of copper up to \$233,000,000. Iron ore shipments, amounting to 24,500,000 tons valued at \$186,000,000, attained a new high. Less gold was produced and the price was lower but silver gained slightly in both quantity and value. Lead and zinc producers reduced their shipments to an over-supplied market, although the value of zinc increased by 4.4 p.c.

The non-metallic group of minerals also increased in value—from \$150,000,000 in 1958 to \$176,000,000 in 1959. The major contributions to the advance were made by asbestos, the quantity of which exceeded 1,000,000 tons for the first time and the value of which reached \$106,600,000. Crude gypsum output in the Maritime Provinces increased substantially, the value showing a 71.3-p.c. increase. Output of salt, augmented by the production of two new mines, increased 36.1 p.c. in volume to exceed 3,200,000 tons and 16.5 p.c. in value to \$17,462,000.

The value of mineral fuels produced was \$540,100,000, an increase of about \$30,000,000 over 1958. Crude petroleum amounted to nearly 185,000,000 bbl. and there were 428,000,000 cu. feet of natural gas utilized. Coal shipments, on the other hand, declined by over 1,000,000 tons.

Structural materials were produced at about the same level as in recent preceding years. An upward trend was noticeable in clay products, sand and gravel but stone output moved downward.

Analysis of Current Value and Volume.—To assist in clearer and simpler interpretation of the trends in mineral production in Canada over the ten years 1950-59, the percentage of the total value contributed by each principal mineral in each year is given in Table 3. Values upon which percentages in this table are based are the annual values of mineral production, expressed in Canadian currency, as shown in Tables 1 and 2.

3.—Percentage of the Total Value Contributed by Principal Minerals, 1950-59

On the basis of 1949 production levels equalling 100, the total volume of mineral output* had increased by 1959 to 251.6, reflecting substantial advances in the output of natural gas, crude petroleum, iron ore and uranium, with lesser advances in copper, nickel, gold and asbestos. Coal was the only major mineral to register an over-all decline since 1949.

4.—Indexes of the Volume of Production of the Principal Mining Industries, 1950-59

(1949=100)

NOTE.—The index of the volume of mineral output has been revised since the publication of the 1959 Canada Year Book and placed on the basis of 1949=100. Figures comparable to those given in this table for 1935-49 may be obtained from the publication mentioned in the footnote to this page.

¹ Based on commodity data.**Subsection 2.—Provincial Distribution of Mineral Production**

The increase in mineral production was general across the country except in Nova Scotia and the Northwest Territories. Lower output of coal brought the Nova Scotia total down and declines in uranium and oil affected the value of output in the Northwest Territories.

* For a description of this index, as well as one for manufacturing and electric power and gas utilities, see DBS Reference Paper *Revised Index of Industrial Production, 1935-1957 (1949=100)* (Catalogue No. 61-502).

Ontario again led the provinces in mineral output, producing 40.3 p.c. of the total in 1959 and increasing its contribution from 37.6 p.c. in 1958 and 34.2 p.c. in 1957. The value rate of increase within the province was 22.9 p.c. in 1959 compared with 5.4 p.c. in 1958 and 16.8 p.c. in 1957. The greatest gains in value were made by copper, which rose by 54.5 p.c., nickel which increased by 35.7 p.c., iron ore by 31.6 p.c. and uranium by 25.1 p.c. Quebec remained in second place, advancing its contribution to 18.1 p.c. of the total Canadian output from 17.5 p.c. in 1958 mainly as a result of higher production of iron ore and copper. Alberta followed in third place with 15.8 p.c. of the total, a slightly lower proportion than its 16.0 p.c. in 1958. The increase in value of output in the province amounted to 9.3 p.c., mainly contributed by the fuels. Saskatchewan continued in fourth place, although its contribution declined from 10.1 p.c. of the total in 1958 to 8.9 p.c. in 1959. The value of uranium output dropped somewhat in this province but the decrease was more than compensated for by increases in oil, gas and coal as well as by the addition of the first production of potash. Value of production for the province was therefore 1.8 p.c. higher than in 1958. British Columbia's share of the total at 6.6 p.c. was also lower in 1959, its output increasing only 4.1 p.c. Moderately higher values of most minerals were offset by decreases in gold, lead, nickel, tungsten and coal.

Newfoundland's contribution to the total Canadian output remained at 3.0 p.c. in 1959, although the province recorded a 11.1-p.c. gain contributed mainly by iron ore, copper and structural materials. Value of mineral output in Manitoba moved only moderately upward—by 1.4 p.c. In that province increases in zinc and copper were offset to some extent by a decrease in gold. In New Brunswick value of output increased by 13.0 p.c.; metal production ceased entirely but the value of coal and structural materials advanced considerably. As stated above, Nova Scotia and the Northwest Territories showed the only over-all decreases in value of mineral output in 1959 as compared with 1958. In the latest year, Nova Scotia contributed 2.5 p.c. of the Canadian total and the Northwest Territories 1.5 p.c.

5.—Value of Mineral Production, by Province, 1950-59

NOTE.—Figures from 1899 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

Subsection 3.—Production of Metallic Minerals

The metallic minerals of greatest dollar value in Canada during 1959 were, in order: uranium, nickel, copper, iron ore, gold, zinc, lead and silver. This order remained unchanged from 1958, each of these metals, with the exception of gold and lead, having advanced considerably in value of production. The value of uranium produced was still well ahead of nickel, which was in second place, but its \$85,000,000 lead attained in 1958 was reduced to \$67,000,000. Developments taking place in metal mining during 1958 and 1959 are dealt with in Section 1 at pp. 538-548. The following statistical information gives a comparison of quantity and value figures for each of the principal metals over the ten-year period 1950-59.

Uranium.—Uranium mineralization has been found in Canada at intervals along the western and southern edges of the Canadian Shield but production is concentrated in four areas within this belt—Great Bear Lake in the Northwest Territories, Beaverlodge in northern Saskatchewan, and Elliot Lake and Bancroft in Ontario. Although output of uranium first began in the Northwest Territories in 1942, figures were not available until 1954 because of government restrictions. However, it is since that time that the large mines and mills of Saskatchewan and Ontario have come into production. Ontario in 1959 contributed 81 p.c. of the total value of production, the great mines and mills of the Elliot Lake area constituting the largest uranium-producing camp in the world.

7.—Production and Value of Uranium (U₃O₈), by Province, 1954-59

¹ Figures for 1956 include radium salts, silver, cobalt and uranium oxides; figures for 1957-59 are for uranium oxide (U₃O₈).

Nickel.—The output of nickel reached an all-time high in 1957, both in quantity and value, dropped considerably in 1958 when a rise in world stocks brought about a decrease in nickel prices, but recovered in 1959 with output figures close to the 1957 level. About 93 p.c. of the 1959 production shown in Table 8 came from the Sudbury area of Ontario, about 5 p.c. from Lynn Lake in Manitoba and the remainder from Rankin Inlet on Hudson Bay in the Northwest Territories and from Hope, B.C.

Canada uses only about 4,000 tons of refined nickel annually. Exports amounted to 102,000 tons in 1959, mostly to the United States, and exports of nickel in matte, etc., amounted to 65,600 tons.

8.—Quantity and Value of Nickel Produced, 1950-59

NOTE.—Figures from 1889 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

Year	Quantity	Value	Year	Quantity	Value
	tons	\$		tons	\$
1950.....	123,659	112,104,685	1955.....	174,928	215,866,007

Copper.—Although the quantity of copper produced in Canada reached its peak in 1959, the total value for that year was lower than that of smaller quantities produced in 1955 and 1956. Among the provinces, the only reduction in tonnage in 1959 was shown

by Saskatchewan. Increases in the other producing provinces ranged from 31.5 p.c. in Ontario to 1.9 p.c. in British Columbia.

9.—Copper Production, by Province, and Total Value 1950-59

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

¹ Includes one ton valued at \$536 produced in N.W.T.

² Includes 383 tons valued at \$218,663 produced in

Nova Scotia and three tons valued at \$1,969 produced in N.W.T. ³ Includes 788 tons valued at \$471,962 produced in Nova Scotia.

⁴ Includes 991 tons valued at \$577,868 produced in Nova Scotia.

⁵ Includes 1,028 tons

valued at \$757,758 produced in Nova Scotia and 35 tons valued at \$26,290 produced in New Brunswick.

⁶ Includes 404 tons valued at \$334,704 produced in Nova Scotia and 6 tons valued at \$5,272 produced in New Brunswick.

⁷ Includes 5,733 tons valued at \$3,322,400 produced in New Brunswick and 165 tons valued at \$95,672 produced in N.W.T.

⁸ Includes 328 tons valued at \$166,683 produced in New Brunswick and 434 tons valued at \$220,748 produced in N.W.T.

⁹ Includes 438 tons valued at \$259,000 produced in N.W.T.

Iron Ore.—Shipments of iron ore from Canadian mines, after a considerable setback in 1958, reached record levels in 1959. The increase in quantity over 1958 was 55.6 p.c. and in value 47.6 p.c. All producing provinces contributed to the advance, but Quebec, with 46.7 p.c. of the total production in 1959, increased its output by 88.7 p.c. Production in Ontario increased by 64.5 p.c. and Newfoundland by 14.9 p.c. These three provinces accounted for 96.5 p.c. of the total production and British Columbia for the remainder.

Production of pig-iron and of steel ingots and castings was also at record levels in 1959. Exports of iron, in the form of ore and concentrates, in 1959 amounted to 20,778,800 tons valued at \$157,814,000, compared with 13,878,272 tons valued at \$107,674,258 in 1958. Of the 1959 tonnage, 72.2 p.c. went to the United States and most of the remainder to Europe, mainly the United Kingdom. Japan received 731,961 tons.

10.—Iron Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings, 1950-59

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

¹ Factory shipments since 1953.

² Total includes production reported for Quebec as well as Nova Scotia and Ontario.

Gold.—Over the ten-year period 1950-59, Canada's annual gold production has fluctuated narrowly between 4,000,000 oz. t. and 4,600,000 oz. t., and its value between \$140,000,000 and \$169,000,000. Estimates for 1959 show a slight decrease in the quantity produced as well as a decrease in value compared with 1958. The decrease was fairly general across the country following a reduction in the average price of gold. Ontario is by far the leading producer, accounting for 60.0 p.c. of the Canadian output in 1959, and Quebec holds second place with 22.2 p.c. of the total. Canada produced 11 p.c. of the world's output in 1959 and ranked as the second largest producer, following the Union of South Africa.

11.—Quantity and Value of Gold Produced, by Province, 1950-59

NOTE.—Values are calculated at world prices in Canadian funds. Figures from 1862 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

¹ Includes 240 oz. t. of gold valued at \$8,052 produced in New Brunswick, valued at \$1,767 produced in New Brunswick.

² Includes 52 oz. t. of gold

Zinc.—The estimated production of zinc (including refined zinc, zinc ores and concentrates) in 1959 was the lowest since 1954. Compared with 1958, it dropped by 7.2 p.c. but a higher average price brought the value 4.4 p.c. above the 1958 level. British Columbia accounts for more than half the Canadian output—50.9 p.c. in 1959. Ontario was second in that year with 12.0 p.c., followed in order by Saskatchewan, Quebec, Newfoundland, Manitoba and the Yukon Territory. New Brunswick's one zinc producer ceased operations early in 1958.

12.—Quantity and Value of Zinc Produced, 1950-59

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

¹ Estimated foreign smelter recoveries and refined zinc produced in Canada.

Lead.—Lead production in 1959 in the form of refined pig and recoverable lead in ore and concentrates was approximately the same as in 1958, although lower prices affected the value, bringing it down by 6.7 p.c. Of the total production, British Columbia accounted for 296,758,890 tons or 79.6 p.c. The only lead refinery in Canada is located in that province at Trail. Silver-lead ores are mined at Keno Hill in Yukon Territory and lead also occurs in the complex ores at Buchans in Newfoundland. Small amounts of lead concentrates are produced in Quebec and Ontario.

13.—Quantity and Value of Lead Produced from Canadian Ores, 1950-59

NOTE.—Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

Year	Quantity	Value	Year	Quantity	Value

Silver.—Silver production in 1959 reached the record amount of 32,239,137 oz.t. with a peak value of \$28,381,750. Most of the increase in 1959 over 1958 came from British Columbia and Yukon Territory. Production of this metal is fairly widespread across Canada, being mainly recovered as a by-product in the treatment of gold ores and ores of copper, lead, zinc, cobalt and nickel. A large part of Ontario's production of 9,956,316 oz. t. in 1959 originated in the silver-cobalt ores mined at Cobalt, and British Columbia produced 8,674,723 oz. t. from its silver-lead-zinc ores. Yukon Territory is the third largest producer, followed by Quebec. Canada's annual output of silver is exceeded only by that of Mexico and the United States.

14.—Quantity of Silver Produced, by Province, and Total Value 1950-59

NOTE.—Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

¹ Includes relatively small quantities produced in New Brunswick and Alberta; there was no silver produced in New Brunswick in 1959.

Metals of the Platinum Group.—Production in 1959 was above the 1958 output but still below the peak of 1957. The whole production comes from the nickel-copper ores at Sudbury, Ont., and the metals are recovered in the form of residues in the electrolytic refinery tanks at Port Colborne, Ont., and at the refinery in Norway to which the Falconbridge Nickel Company Limited ships nickel-copper matte.

15.—Quantity and Value of Platinum and Palladium¹ Produced, 1950-59

¹ Includes also iridium, rhodium, ruthenium.

Subsection 4.—Production of Non-metallic Minerals (excluding Fuels)

Asbestos is by far the most important item in this group in point of value, followed by salt, gypsum and sulphur. These four items are discussed separately below; the quantity and value of other non-metallic minerals produced are shown in Table 2, p. 570. See also the review of developments in the industrial mineral field at pp. 548-551.

Asbestos.—After a 11.6-p.c. decline in 1958, the tonnage of asbestos produced in 1959 increased again to almost the 1957 level and the value of that tonnage reached a record high of \$106,592,000. Quebec with 12 producing mines accounted for 94.5 p.c. of the Canadian total; Ontario had one mine which produced 23,700 tons and British Columbia one mine which produced 34,025 tons.

16.—Quantity and Value of Asbestos Produced, 1950-59

NOTE.—Figures from 1896 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Quantity	Value	Year	Quantity	Value
	tons	\$		tons	\$

Salt.—The production of salt in 1959 reached the record amount of 3,233,512 tons, a 36.1-p.c. increase in tonnage over 1958 and a 16.5-p.c. increase in value. Ontario produced 92.3 p.c. of the tonnage in 1959 and, with a large new mine in production, accounted for the major part of the increase over the previous year. Output in all producing provinces, with the exception of Nova Scotia, was somewhat higher. Rock salt is mined in Nova Scotia and Ontario only; brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta.

17.—Quantity of Salt Produced, by Province, and Total Value 1950-59

Gypsum.—Nova Scotia deposits provided more than 85 p.c. of the total output of gypsum in 1959. The increase of 61.7 p.c. in the tonnage produced in that province over 1958, together with moderate increases in Newfoundland, Manitoba and British Columbia, brought the Canadian total to the record level of nearly 6,000,000 tons having a value of \$8,890,000. In Canada gypsum is used in the manufacture of plaster and wallboard and is added to Portland cement to control setting, but the greater part of the output is exported in crude form to United States plants for processing.

18.—Quantity of Gypsum Produced, by Province, and Total Value 1950-59

NOTE.—Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

Sulphur.—Figures in Table 19 represent the quantity and value of sulphur contained in derivatives from smelter gases such as sulphur dioxide, sulphuric acid, etc., and in pyrite and pyrrhotite shipments. Sulphur refined from natural gas production is not included.

In Canada sulphur is used in the treatment of sulphite pulps and in the manufacture of rayon, explosives, rubber goods, petroleum refining, matches and insecticides.

² Includes

Subsection 5.—Production of Fuels

Coal.—The production of coal continued its downward trend in 1959, recording a reduction of 9.3 p.c. in quantity and 8.6 p.c. in value from 1958. Consumption was also considerably lower.

Increases in New Brunswick and Alberta were more than counterbalanced by decreases in all other producing provinces. Imports were also lower but exports showed a moderate improvement, increasing by 39.9 p.c. in quantity and 23.2 p.c. in value.

The sources of coal consumed in Canada in the years 1950-59 are shown in Table 23 and detailed figures of coal made available for consumption in 1958 and 1959 are given in Table 24; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not cleared for consumption until required, and coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally the coal made available for consumption is greater than the apparent domestic consumption as coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond but, while remaining in bond at the port, it is available for domestic consumption if required.

23.—Consumption of Canadian and Imported Coal in Canada, 1950-59

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1921 edition.

¹ Coal reaching Canadian ports whether or not it is cleared through customs, exclusive of 35,905 tons of imported briquettes in 1958 and 25,450 tons in 1959.

Petroleum.—The upward climb of crude petroleum production in evidence since the discovery of the Leduc field in Alberta in 1947 halted temporarily in 1958 but resumed in 1959. Production in the latter year reached a record level, 1.5 p.c. above the previous peak in 1957, but the 1957 value still remained the high point. The increase in 1959 over 1958 was mainly accounted for by a more than 15,000,000-bbl. increase in Alberta, although output was also higher in Ontario and Saskatchewan.

25.—Quantity and Value of Crude Petroleum Produced, by Province, 1950-59

Natural Gas.—The output of natural gas continued to increase at a rapid rate, reflecting heavier pipeline deliveries and higher domestic sales. Shipments, which amounted to 150,800,000 M cu. feet in 1955, reached a high of 427,800,000 M cu. feet in 1959, about 309,000,000 M cu. feet of which came from Alberta. That province, being by far the major producer, was responsible for most of the increase in production in 1959. Several plants have been built in Alberta to treat natural gas for the removal of sulphur, butane, propane and other hydrocarbons prior to delivery to the transmission pipelines which now extend eastward as far as Quebec City and westward to Vancouver and the northwestern United States.

26.—Quantities of Natural Gas Produced, by Province, and Total Value 1950-59

PRODUCTION OF CRUDE PETROLEUM AND NATURAL GAS FOR CANADA AND THE PROVINCE OF ALBERTA

Subsection 6.—Production of Structural Materials

Active construction throughout Canada in recent years has kept production of all structural materials at a high level. In 1959 this group registered an advance of 1.6 p.c. over 1958, to reach a record total value of more than \$314,000,000. All provinces shared in the general increase except Quebec where reduced production of stone brought the total down. For Canada as a whole, gains of 4.2 p.c. in the value of sand and gravel, 1.5 p.c. in cement and 8.3 p.c. in clay products highlighted 1959. The value of output of building stone was lower by 8.0 p.c.

In point of value, the production of sand and gravel was the most important in 1959, followed by cement, stone, clay products and lime. Major developments in the structural materials industries during 1958-59 are covered in the review at pp. 550-551.

Sand and Gravel.—Deposits of sand and gravel are numerous throughout Eastern Canada with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of the haul. This accounts for the large number of small pits and the small number of large plants. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries command much higher prices than ordinary sand. Quebec and Ontario contributed 64 p.c. of the total quantity of sand and gravel

in 1959. The greater part of the output is used in road improvement, concrete works and railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

27.—Quantity and Value of Sand, and Sand and Gravel Produced, 1956-58

Material and Purpose	1956		1957		1958

Cement.—The production of cement continued its upward trend in 1959, showing an increase over 1958 of 2.3 p.c. in quantity and 1.5 p.c. in value. Of the Canadian total of 6,296,010 tons, Ontario contributed 37.7 p.c. and Quebec 31.4 p.c. and all other provinces except Prince Edward Island and Nova Scotia contributed varying amounts; the percentages changed little from the previous year. Moderate increases in production were shown by Manitoba, Alberta and British Columbia.

28.—Quantity and Value of Production, Imports, Exports and Apparent Consumption of Cement, 1950-59

Note.—Figures from 1910 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

¹ Shipments plus imports less exports.

² Includes imported clinker, other than white.

Stone.—The stone industry has two main divisions—stone quarrying and the stone products industry. The granite, limestone, marble, sandstone and slate quarries of Canada yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries. The gross value of stone of all varieties produced in Canada in 1959 totalled \$51,167,000 as compared with \$55,583,000 in 1958. Detailed data for 1959 were not available at time of going to press.

¹ Includes minor items not specified.

Clay Products.—The sales value of clay products produced in 1959 was the highest recorded, showing an increase over 1958 of 8.3 p.c. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale, nor have the ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan been developed to any extent.

30.—Value (Total Sales) of Clay Products Produced, by Province, 1950-59

Section 5.—Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries such as the copper-gold, silver-lead-zinc, and nickel-copper industries as well as a section on metallurgical works. Additional data published at irregular intervals include such features as numbers of employees, salaries and wages paid and net value of shipments.

The figures for 'net value of shipments' of industries given in Tables 31 and 32 are, in each table, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 2, pp. 569-570 where, with respect to copper, lead, zinc and silver, values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process.

Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used, and of cobalt which is derived mainly from African ores. The net shipments of these plants include, therefore, the net value of the metals recovered from these imported ores and to this extent the net shipments shown in Tables 31 and 32 include products of other than Canadian origin.

31.—Summary Statistics of the Mineral Industry, by Province, 1958

Section 6.—World Production of Certain Metallic Minerals and Fuels

Table 33 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1958. These figures are taken from the *United Nations Statistical Yearbook 1959* which presents production figures for 1948-58 for a much more extensive list of mining and quarrying industries. The 1958 figures are provisional and have been converted from kilograms to ounces troy for gold, from metric tons to ounces troy for silver, and from metric tons to short tons for the other metals and fuels shown.

33.—World Production of Certain Metallic Minerals and Fuels, 1958

Note.—Where dashes occur throughout this table they indicate that no figures were given in the *United Nations Statistical Yearbook* either because there was no production or because the quantity was not available.

Section 1.—Water Power Resources—Available and Developed*

Canada, a land of many lakes and rivers, has been favoured by nature with great water power resources distributed across the country. Adequate precipitation and favourable topography result in numerous fast-flowing rivers which offer excellent opportunities for the development of hydraulic power; with the exception of the prairies of the mid-west, water power resources of importance are found in virtually every part of the country. British Columbia, traversed by three distinct mountain ranges and with a relatively high rate of precipitation, has many mountain rivers which offer opportunity for power development. Extensive water power resources are available in the Yukon Territory, principally on the Yukon River and its tributaries. Alberta, although a prairie province, also has mountain streams from the Rockies and great reserves of undeveloped power on its large northern rivers. The Canadian Shield of Precambrian rock, which forms an arc around Hudson Bay and covers a portion of the Northwest Territories and northern Saskatchewan as well as large parts of Manitoba, Ontario, Quebec and Labrador, is a rough, forest-covered area characterized by innumerable lakes and by rivers with many falls and rapids. The Great Lakes-St. Lawrence River system and its tributaries provide the extensive power resources of Ontario and Quebec upon which their status as the principal manufacturing provinces of Canada is dependent and which compensate in large degree for the lack of indigenous coal. In New Brunswick and Nova Scotia and on the Island of Newfoundland, precipitation is moderately heavy and the rivers, though not large, afford numerous possibilities for power developments of moderate size. In Labrador the potential resources of the Hamilton River are outstanding.

An accurate comparison of Canada's water power resources and their development with those of other countries is not possible because world statistics are incomplete and are tabulated on differing bases. However, from information available it appears that Canada ranks second among the countries of the world in total installed capacity, being exceeded only by the United States; in installation per thousand population, Canada is exceeded

* Revised by the Water Resources Branch, Department of Northern Affairs and National Resources, Ottawa.

only by Norway. Canada is in approximately fifth place in potential power resources but, on the whole, those resources are more readily available to prospective markets than are the water power resources of other countries that outrank Canada, an exception being the United States. In particular might be mentioned the enormous potential resources of the great river systems of Africa and Asia.

Table 1 gives a summary of the water power resources of Canada and their development as at the beginning of 1960.

stream flow regulation based on known storage potentials.

² This figure reflects the effect of possible

The figures given in the first and second columns of Table 1 represent 24-hour power and are based upon rapids, falls and power sites of which the actual drop, or the head of possible concentration, has been measured or at least carefully estimated. Tabulations of potential power in Canada are not complete as many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams throughout the country, particularly in the less explored northern districts. Apart from areas where definite studies have been carried out and the results recorded, no consideration has been given to the power concentrations that are feasible on rivers and streams of gradual gradient where economic heads possibly may be created by the construction of dams. Furthermore, the estimates of power available in different provinces do not include the power potential of major river diversions which have been investigated but not developed. Thus the figures in Table 1 of available power under the two conditions of stream flow represent only the minimum water power possibilities of Canada.

The figures in the third column of Table 1 give the total capacity of the water wheels actually installed and should not be placed in direct comparison with those in the first and second columns to deduce the percentage developed of the available water power resources. While the maximum economic turbine installation at any site can be determined only by careful consideration of all conditions and circumstances pertinent to its individual development, it is usual practice to install turbines that have a total capacity in excess of the power equivalent of the six-months flow at the site.

The consistent growth of hydraulic turbine capacity is shown in Table 2. The average annual increase from 1900 to 1905 of 56,000 hp. was stepped up sharply in subsequent years because of improvements in the transmission of electricity and the building of large generating stations. During the period 1906-22, development proceeded at the fairly uniform rate of 150,000 hp. per annum but the rate of installation increased sharply in 1923 and continued at about 377,000 hp. each year from 1923 to 1935. As an aftermath to the economic depression, the rate of installation was low during the years 1936-39 but increased to a high average of 481,000 hp. per annum during the period 1940-43 to satisfy war requirements. Few developments were undertaken in the later war years or in the immediate postwar period so that only a small amount of new capacity came into operation in the 1944-47 period. However, the effects of the later postwar program of construction are apparent in the large growth during the years 1948-59 when the average rate was about 1,200,000 hp. per annum. A continuation of this rate of growth is indicated for some years.

2.—Hydraulic Turbine Horsepower Installed, by Province, as at Dec. 31, Decennially 1900-50 and Annually 1951-59

NOTE.—Figures for the years 1900-30 are given in the 1939 Year Book, p. 362; for 1931-39 in the 1946 edition, p. 362; and for 1940-49 in the 1954 edition, pp. 556-557.

ELECTRIC ENERGY GENERATED, BY TYPE OF STATION

The availability of large amounts of hydro-electric energy has greatly fostered the economical utilization of the natural products from land, forest and mine. Low-cost power is fundamental in meeting the enormous requirements of Canada's great pulp and paper and smelting and refining industries. Indeed, Canada's outstanding industrial growth in the postwar period has been made in conjunction with accelerated development of water power resources. From hydro-electric plants ranging in capacity from a few hundred to more than 1,000,000 hp., networks of transmission lines carry power to most urban centres and to an increasing number of rural districts. This wide distribution of power has facilitated the decentralization of industry, enabling manufacturing processes to be carried on in many of the smaller centres of population. Low-cost domestic electrical service also contributes in no small measure to the high standard of living in Canada.

Table 3 indicates the respective amounts of water power that have been developed by utilities and by industrial establishments. For this tabulation, utilities are defined as companies, municipalities or individuals who sell most of the power they develop. In some instances they include also certain subsidiary companies whose main purpose is to develop and sell power to a parent company for industrial purposes. Installations of utilities totalling 19,223,020 hp. represent 77 p.c. of Canada's total developed water power as at Dec. 31, 1959.

Industrial establishments are defined as companies or individuals developing power mainly for their own use. Installations of industrial establishments totalled 5,665,406 hp. as at Dec. 31, 1959. In addition, industry purchased a considerable amount of electricity from utilities.

The figure of total hydraulic installation in Canada (24,888,426 hp.) is the cumulative total of all existing installations of water wheels and hydraulic turbines irrespective of whether or not the equipment has been in use during the year. It has been adjusted to

Dec. 31, 1959 by the inclusion of new installations completed during the year and by deletions of old units that were dismantled.

Section 2.—Thermal Power*

Thermally produced electric power capacity has expanded at a phenomenal rate since World War II. It has been estimated that the ratio of generating capacity in central thermal and hydro stations has sharply narrowed from 1:15 to 1:7 in the ten-year interval prior and subsequent to 1945. In 1959, this ratio approached 1:5 with the probability that by 1980 it would be as little as 1:2.

The accelerating trend toward thermal power developed significantly within the years 1950–59, particularly in the Atlantic and Prairie Provinces and in British Columbia. While Quebec, Ontario and the Northwest Territories depend less on thermally generated power than the remainder of Canada, these regions too will eventually have need for such power.

This trend has been brought about for a number of reasons, mainly of economic expediency. Canada's rapidly expanding economy demands ever-increasing supplies of electric energy to serve a growing population and industrial complex. Supplies of hydraulic energy within economic transmission distance of populated areas are becoming fewer and more costly to develop. Expenditure of large amounts of capital required to develop single blocks of hydro power at distant points cannot be justified unless there is immediate use for all of the power generated at a load factor which warrants its transmission over long distances. Moreover, the load on the established electrical systems in many areas now needs firming with extra supplies of reliable thermal energy not heretofore required, and this can be provided at lower capital cost per unit of installed capacity than by hydro facilities which may be affected by periodic water shortages.

The trend is well exemplified by reference to the vast complex of The Hydro-Electric Power Commission of Ontario, one of the world's largest single power operations. At the end of 1959 this system had generating resources of 5,756,640 kw. of which only 771,965 kw. were installed in thermal stations. Additional steam capacity under construction amounted to 1,500,000 kw. with forecast of about 3,000,000 kw. to meet requirements by 1970. The Commission's long-term forecast estimates that, if nuclear electricity is not available at competitive cost by 1980, 26,500,000 tons of coal annually, at a cost of some \$300,000,000,

* Revised in the Transportation and Public Utilities Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

will be required to fuel its steam capacity which by 1980 may amount to 10,000,000 kw. or twice the available generating facilities available from hydraulic sources.

The report of the sixth survey of capability and load shows that from 1950 to 1959 the net generating capability of thermal stations had increased by 296 p.c., as compared with 99 p.c. for hydro stations, with a forecast that by the end of 1962 thermal station net generating capability will have advanced over 1950 by 646 p.c. as against 129 p.c. for hydro stations.

Table 4 gives, by province, the estimated amount of increase in net generating capability and the percentage annual increment in thermal and hydro facilities for the period 1950-62. These data clearly indicate the growing importance of thermal generating capacity in comparison with hydro, and that, proportionately, the rate of growth is higher than for hydro in all of the provinces.

4.—Estimated Increase in Net Generating Capability, by Province, for the Period 1950-62

Table 7 gives the maximum size of steam-driven turbo-generator units in thermal stations and shows clearly the trend toward the installation of larger and more efficient generating facilities capable of producing lower cost electric energy from the mineral fuels—coal, oil and natural gas.

¹ Prepared by the Fuels Division, Department of Mines and Technical Surveys, Ottawa.

Heretofore, a fair proportion of the thermal generating capacity was operated at extremely low rates of load factor, particularly in small stations serving isolated communities, and as standby to hydro facilities. However, progressive increase in load and need for firmer output is making it economical to install larger and more efficient thermal units, essentially in the larger stations serving widespread system demands. Here the capacity is mainly provided by steam-motivated turbo-alternators, the largest of which are capable of generating a kilowatt-hour from a pound of coal. Still larger units, shortly to be installed, will be capable of generating a kilowatt-hour with as little as two-thirds of a pound of coal. From 1954 to 1958, nine gas-turbine-driven generating sets with capacities of from 8,400 to 30,000 kw. were installed in Western Canada and several more were in course of installation at the end of that period. These sets have the advantage of low first cost and extreme flexibility, and are well suited for peaking operations in an integrated system.

In 1958, thermal facilities provided 15.5 p.c. of the electricity generated in Canada and hydro facilities 84.5 p.c. Of the thermal generation, as much as 90.6 p.c. was provided by steam-driven equipment and 9.4 p.c. by diesel-engine and gas-turbine equipment.

Section 3.—Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electrical utilities and all industrial establishments that generate energy regardless of whether or not any is sold, and therefore show the total production and distribution of electric energy in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy which they have either generated or purchased. Industrial establishments are defined as companies or individuals that generate electricity mainly for use in their own plants.

The current series of electric power statistics dates back only to 1956. Earlier reports, entitled "Central Electric Stations", were concerned solely with the electrical utility industry and hence excluded statistics relating to power produced by industrial establishments for their own use, although power sold by such establishments was included.

The figures of total water and thermal power generated for the years 1942-55 shown in Table 8 are compiled on the old basis, figures for 1956 are shown on both bases for comparative purposes, and those for later years are on the new basis.

¹ New series, see immediately preceding text.

Of the total generation in 1958 of 97,466,822,000 kwh., 92.9 p.c. was produced from water power and 7.1 p.c. was generated thermally; in 1957 total generation was 91,042,080,000 kwh. of which 91.6 p.c. was produced from water power and 8.4 p.c. thermally. The proportions generated in 1958 differed somewhat among provinces as shown in the following statement.

Province	Hydro	Thermal	Province or Territory	Hydro	Thermal
	p.c.	p.c.		p.c.	p.c.

Table 9 gives summary figures of power production and distribution classified by province and Tables 9 and 10 give figures classified by type of production establishment. Total installed capacity in Canada amounted to 18,559,368 kw. in 1958, an increase of 1,831,129 kw. over 1957. Of the 1958 total, 14,758,524 kw. were accounted for by utilities and the remainder by industrial establishments. During 1957 and 1958 total sales to ultimate customers amounted to 60,543,520,000 kwh. and 65,323,721,000 kwh. respectively, of which nearly 99.7 p.c. was sold each year by utilities.

Sales to power customers made up 62.9 p.c. of the total in 1957 and 61.6 p.c. in 1958, sales to domestic and farm customers were 26.2 p.c. and 26.5 p.c., and commercial sales 10.1 p.c. and 11.1 p.c. in the respective years.

Exports to the United States in 1958 amounted to 4,074,513,000 kwh. compared with 4,829,843,000 kwh. in 1957.

Average domestic and farm consumption rose from 3,960 kwh. in 1957 to 4,128 kwh. in 1958. Among the provinces the averages in 1958 varied from a low of 1,439 kwh. in Prince Edward Island to a high of 6,113 kwh. in Manitoba. For domestic and farm customers the average annual bill was \$66.49 in 1958 as against \$64.19 in 1957, an increase of 3.6 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from 3,415 kwh. per customer in 1957 to 3,686 kwh. in 1958 and the average bill was \$86.46 in 1958 compared with \$80.80 in 1957.

In 1958 coal accounted for 46.2 p.c. of thermal generation, natural gas for 40.2 p.c. and petroleum fuels for 13.6 p.c.; the percentages in 1957 were 55.4, 28.9 and 15.7, respectively.

Section 4.—Water and Thermal Power Developments in the Provinces and Territories, 1959

For the second consecutive year, a record was established in the amount of new hydro-electric generating capacity brought into operation during a single calendar year. A total of 2,508,800 hp. of new capacity was installed during 1959, exceeding the previous record of 2,488,618 hp. completed in 1958. Installations under construction will add about 1,700,000 hp. during 1960 and another 2,300,000 hp. of new capacity is either under construction or in active prospect for development in succeeding years. Progress in hydro-electric and thermal-electric construction during 1959 is outlined below by provinces.

Atlantic Provinces.—In Newfoundland, the United Towns Electric Company Limited completed a single-unit 1,200-hp. development on New Chelsea Brook at Pitman's Pond, and ordered a new unit of about 3,200 hp. for installation by June 1960 to replace two units at Heart's Content on the Heart's Content River. The Iron Ore Company of Canada began construction to add a new 12,000-hp. unit in April 1960 at its Menihek Rapids development on the Ashuanipi River in Labrador. In active prospect were: the installation by the Newfoundland Light and Power Company Limited of a single-unit 6,500-hp. development on Middle Brook near Gambo; the installation of two 38,500-hp. units by the Southern Newfoundland Power and Development Limited as part of an ultimate development of 350,000 hp. in the Bay d'Espoir area of Newfoundland; and the installation of two 60,000-hp. units by the Hamilton Falls Power Corporation Limited as part of an ultimate development of 300,000 hp. at Scott Falls on the Unknown River in Labrador. In the field of thermal-electric construction, the Newfoundland Light and Power Company Limited completed the addition of a 20,000-kw. unit at its steam plant at St. John's.

In Prince Edward Island, the Maritime Electric Company Limited proceeded with the installation of a 10,000-kw. unit, scheduled for operation late in 1961 in the Company's steam plant at Charlottetown.

In Nova Scotia, the Nova Scotia Power Commission continued with the construction of two single-unit developments on the Sissiboo River. One of these, with a turbine capacity of 12,000 hp., is located at Weymouth Falls and is scheduled for operation in July 1960; the second development, rated at 8,000 hp., is expected to be in operation in March 1960 at Sissiboo Falls. The Commission has in active prospect a 10,800-hp. development at Riverdale, also on the Sissiboo River, and a 90,000-hp. installation on Wreck Cove Brook. The Nova Scotia Light and Power Company Limited began construction of a single-unit 7,500-hp. development on the Lequille River at Lequille which is expected to be in operation in 1961. The Company has in active prospect a single-unit 6,500-hp. development on the Nictaux River at Alpena. In the thermal-electric field, construction continued at the Nova Scotia Power Commission's steam plant at Trenton where a 20,000-kw. unit was scheduled for operation in April 1960. The Nova Scotia Light and Power Company Limited completed the installation of a 45,000-kw. unit at its Halifax steam plant and the Seaboard Power Corporation Limited added a new 16,000-kw. unit at its Sydney steam plant.

In New Brunswick, the New Brunswick Electric Power Commission acquired ownership of the 80,000-hp. Grand Falls generating station on the St. John River, formerly owned by the Gatineau Power Company Limited. At the Commission's Milltown development, a 500-hp. unit which was installed in 1910 and retired in 1920 was reconditioned and placed in service in June 1959. At Saint John, a new 50,000-kw. steam turbine plant was under construction, scheduled for completion in July 1961.

Quebec.—Quebec led the provinces in the amount of new hydro-electric capacity installed in 1959. Of the 1,457,800 hp. of new capacity placed in operation in the province, the Quebec Hydro-Electric Commission contributed about one-half. The Commission's Bersimis II development began initial operation when three units, each rated at 171,000 hp., were placed in operation; this development when completed in 1960 will have a

rated capacity of 855,000 hp. in five units. The third and final section of the Commission's Beauharnois development also began initial operation during 1959 when four units, each rated at 73,700 hp., were installed. By 1961 this section, consisting of ten 73,700-hp. units with provision for an eleventh, will be completed and the installed capacity of the over-all development will be 2,234,700 hp. The Commission started construction on a new power development on the Ottawa River at Carillon, some 50 miles from Montreal; the powerhouse will contain 14 units, each rated at 60,000 hp. Work was also started on the construction of an 80-mile road to provide access to the site of the proposed reservoir for the Manicouagan development.

The Aluminum Company of Canada began initial operation at its giant Chute des Passes development on the Peribonca River when three 200,000-hp. units were placed in service. With the completion of two more units in 1960, the development will have a rated capacity of 1,000,000 hp.

The James MacLaren Company Limited completed construction of a 50,000-hp. hydro-electric development in two units on the Lièvre River at Buckingham. A 1,500-hp. plant at that location ceased operation early in 1959.

The Quebec Cartier Mining Company continued construction of a power project on the Hart Jaune River, in the headwaters of the Manicouagan River. The powerhouse, located 27 miles upstream from Big Manicouagan Lake, will be completed late in 1960 with the installation of three 22,000-hp. units. Power will be supplied to the Company's mine site some 10 miles from the powerhouse.

Ontario.—During 1959, new hydro-electric capacity totalling 831,300 hp. was placed in service in Ontario, most of which was installed by The Hydro-Electric Power Commission of Ontario, Canada's largest power producing and distributing agency. The Commission was engaged in the construction of five hydro-electric developments during the year. Major construction was completed at the Robert H. Saunders-St. Lawrence Generating Station where nine 75,000-hp. units were added, raising the capacity of the Canadian portion of the development to 1,200,000 hp. in 16 units. The Commission also completed construction of its 60,000-hp. Silver Falls Generating Station on the Kaministiquia River and progress was made in the development of other sites in northern Ontario. A fifth unit rated at 66,000 hp. was installed at the Abitibi Canyon Generating Station on the Abitibi River raising installed capacity at this station to 330,000 hp. Construction continued at Red Rock Falls on the Mississagi River where the first of two units, each rated at 26,500 hp., should be in operation late in 1960. Installed capacity in northern Ontario will be further increased by the construction of a generating station at Otter Rapids on the Abitibi River where four 60,000-hp. units will be installed and minimum provision made for four additional units; the first two units are scheduled for service in 1961.

The Commission proposes to co-ordinate the development of these hydraulic resources with the construction of thermal-electric generating facilities in areas of concentrated load. The plan is to pool the output of a number of the hydraulic developments at a gathering station in the north and to bring it to load centres in southern parts of the province by extra-high-voltage transmission line, using voltages more than twice as high as those at present employed by the Commission. With this purpose in mind the Commission is conducting tests on an experimental high-voltage line in the vicinity of Coldwater, where conditions involved in the transmission of power at voltages from 400 to 600 kv. are being simulated.

The construction of thermal-electric stations is also being aggressively continued. At the Richard L. Hearn Generating Station at Toronto, the Commission added the first of four additional steam-turbines, each with a capacity of 268,000 hp. The remaining three units will be added in 1960, when the plant will consist of eight units totalling 1,608,000 hp. Further thermal-electric capacity is under construction in southern Ontario, involving installation of four 402,000-hp. units at the Lakeview Generating Station near Toronto. One unit is scheduled for completion in 1961 and the other three by 1964. Plans provide for a total installation of 2,400,000 hp. at this station. At Fort William, construction

continued on a steam turbine plant to consist of one unit of 134,000 hp.; however, if required, the site will permit the construction of a generating station having a capacity of 1,340,000 hp.

The Commission, in conjunction with Atomic Energy of Canada Limited and the Canadian General Electric Company Limited, is constructing, for completion in 1961, a 26,800-hp. Nuclear Power Demonstration plant near Des Joachims Generating Station on the Ontario side of the Ottawa River. In addition, several engineers of the Commission were assigned to aid the Nuclear Power Plant Division of Atomic Energy of Canada Limited in carrying out development work for a 268,000-hp. nuclear-electric generating station to be located on Lake Huron between Kincardine and Port Elgin. When it has been demonstrated to be a satisfactory source of power, it is proposed that the Commission will purchase this station at a price which will permit the production of energy at costs competitive with those of alternative energy sources.

Apart from the activities of the Commission, the Great Lakes Power Company completed the construction of its Hollingsworth Falls development on the Michipicoten River with the installation of a single 30,300-hp. unit.

Prairie Provinces.—In Manitoba, the Manitoba Hydro-Electric Board continued construction on the first-stage development of the Grand Rapid project on the Nelson River where five units of 42,000 hp. will be installed in 1960, with provision for a sixth similar unit. The power will be supplied to the mining project of the International Nickel Company in the Moak, Mystery and Thompson Lakes area of northern Manitoba. Work continued on the Board's Selkirk Generating Station where installation of two 66,000-kw. steam turbines will be completed in 1960, and construction proceeded on an interconnection between the Board's Brandon Generating Station and the Saskatchewan Power Corporation's Boundary Dam Generating Station.

In Saskatchewan, the Churchill River Power Company Limited, a subsidiary of the Hudson Bay Mining and Smelting Company Limited, completed the installation of a 19,000-hp. unit at Island Falls on the Churchill River, raising the installed capacity at the site to 125,500 hp. in seven units. In May, the Prairie Farm Rehabilitation Administration commenced construction of the main earth-fill dam for the South Saskatchewan River Project at the Coteau Creek site. Although the works are being constructed primarily for irrigation purposes, hydro-electric facilities will be incorporated by Saskatchewan at the dam. The initial installation will consist of three units of 50,000 or 60,000 hp. each, with provision for two similar units. The project is scheduled for completion in 1966. The Saskatchewan Power Corporation started the construction of a development in the Tobin Rapids-Squaw Rapids reach of the Saskatchewan River, 35 miles northeast of Nipawin. The development will consist of six units, each rated at 46,000 hp.; four units are planned for installation by 1963 and the remainder by 1964. During 1959, the Corporation doubled the capacity of its Queen Elizabeth steam turbine plant at Saskatoon with the addition of a second 66,000-kw. steam turbine unit. At the new Boundary Dam Generating Station at Estevan, the Corporation installed the first unit, a steam unit of 66,000 kw., and is constructing a second similar unit. A new 500-kw. diesel unit was added by Northland Utilities Limited to its plant at Uranium City.

In Alberta, Calgary Power Limited resumed construction on extensions to its Spray and Rundle plants located in the upper part of the Bow River basin. Both plants are scheduled for completion in late 1960 at which time the capacity of the Spray plant will be doubled by the addition of a 62,000-hp. unit and the Rundle plant will be almost trebled by the addition of a 40,000-hp. unit. The Company also began the installation of a single 200,000-hp. unit on the Brazeau River at Big Bend, about 15 miles upstream from the confluence with the North Saskatchewan River. Plans for this development call for the installation of additional units of the same size to an ultimate capacity of 800,000 hp. Investigation is under way for a hydro-electric development on the Saskatchewan River at Brazeau Forks, below the confluence with the Brazeau River. In the thermal-electric field, Calgary Power Limited proposes to begin installation in 1960 of a 150,000-kw. steam turbine as an addition to its 132,000-kw. Wabamun plant.

The City of Edmonton in 1959 increased the capacity of its municipally owned plant to 180,000 kw. in seven units by the addition of a 30,000-kw. gas turbine unit. A 500-kw. diesel unit was installed by Northland Utilities Limited at its Lac la Biche plant. Canadian Sugar Factories Limited plan to install a 1,675-kw. unit for service in 1960 at Taber.

British Columbia.—Hydro-electric construction was active in British Columbia during 1959. A total of 199,000 hp. of new capacity was added, the major part of it by the British Columbia Electric Company Limited which placed in operation two units of 82,000 hp. each at its Bridge River No. 2 plant. Two similar units will be added in 1960 at this plant, increasing the total installed capacity to 328,000 hp. Mission Dam, which is being built in conjunction with the No. 2 development, will raise the head at the Bridge River No. 1 plant and thereby increase its output from 248,000 hp. to 276,000 hp. The British Columbia Power Commission completed construction of its Ash River development with the installation of a single unit of 35,000 hp. and has two developments in the planning stage—a 51,500-hp. installation at Kokish River on Vancouver Island and the single 43,000-hp. unit Pyramid Mountain-Murtle River development with an expected ultimate capacity of 172,000 hp. in four units. Other hydro-electric facilities planned for the province include the installation by the Northern British Columbia Power Company Limited of a second 6,000-hp. unit at its Falls River development on Big Falls Creek and the development by the City of Revelstoke of a site on Cranberry Creek where one unit of 5,700 hp. will be installed and a second similar unit provided for.

In the field of thermal power, the British Columbia Electric Company Limited completed work on its Port Mann gas turbine plant located on the south bank of the Fraser River near New Westminster; four units, each with a generator capacity of 25,000 kw., were placed in operation. At Ioco, on Burrard Inlet, the Company continued construction of a large steam plant designed for an ultimate capacity of six units, each rated at 211,000 hp. The first unit is scheduled for operation in 1961, the second in 1962, the third in 1964 and subsequent units when required by load growth. At Chemainus on Vancouver Island, the British Columbia Power Commission completed the installation of the remaining two gas-turbine units in its Georgia generating station, increasing the generating capacity to 87,040 kw. in four units. Numerous smaller capacities were added at existing plants of the Commission including 3,000 kw. at Dawson Creek, 1,200 kw. at Chetwynd, 1,000 kw. at Smithers, and 252 kw. at Alert Bay. Other additions to plants of the Commission are planned or are in active prospect for installation in 1960 including 9,000 kw. at Prince George, 6,000 kw. at Quesnel, 3,000 kw. at Dawson Creek, 1,100 kw. at Port Hardy and 1,000 kw. at Smithers. The Northern British Columbia Power Company Limited added a diesel unit with generating capacity of 2,034 kw. to its plant at Prince Rupert and the British Columbia Refining Company Limited had a 1,250-kw. unit near completion at its Vancouver plant.

Northwest Territories and Yukon Territory.—The Northern Canada Power Commission began construction early in 1959 of a development on the Snare River which will provide 9,200 hp. in one unit late in 1960 and make provision for a second similar unit.

During the year a diesel generating unit of 1,000 kw. was installed at Yellowknife and another of 100 kw. at Fort Simpson, and a 600-kw. steam turbine unit was installed at Inuvik. New thermal capacities are proposed for 1960 including 1,000 kw. at both Frobisher Bay and Fort Smith, 750 kw. at Inuvik and 250 kw. at Fort Simpson. With the completion of the Commission's Whitehorse Rapids generating station, the Yukon Electrical Company dismantled its 750-kw. diesel plant at Whitehorse, but installed a 500-kw. diesel plant at Watson Lake and increased the capacity of its diesel plant at Haines Junction from 150 kw. to 600 kw.

Section 5.—Ownership and Regulation of Electrical Utilities*

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 10, pp. 605-606, giving statistics by type of establishment, shows that 48 p.c. of the total electric power generated in 1958 was produced by publicly operated utilities, 30 p.c. by privately operated utilities and 22 p.c. by industrial establishments. However, ownership differs greatly in different areas of the country. Quebec output, for instance, is predominantly from privately owned plants since a large portion of the power development in that province is connected with pulp and paper establishments and with the aluminum industry. In Ontario, on the other hand, almost all electric power is produced by a publicly owned utility, The Hydro-Electric Power Commission of Ontario.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies of the provincial electric power commissions, their functions and activities are summarized in the following paragraphs. Certain privately owned utilities are also covered.

Newfoundland.—There are no publicly owned hydro-electric systems in Newfoundland. The largest water power development in the province is located at Deer Lake. The plant, which is operated by Bowater's Newfoundland Pulp and Paper Company Limited, has a total capacity of 154,000 hp. This Company develops hydro-electric energy at Deer Lake mainly for its own use in the manufacture of pulp and paper and also supplies electric power to the Buchans Mining Company for its mining operations and to the Newfoundland Light and Power Company Limited which distributes electricity to consumers in Corner Brook and adjacent communities in the Bay of Islands sections, to the towns of Grand Falls, Windsor, Bishop's Falls, Botwood and Lewisporte, and to the International Airport at Gander and the Township of Gander nearby. The Company, in addition to its eight hydro plants, operates two steam generating plants at St. John's, having a total capacity of 30,000 kw.

The United Towns Electric Company Limited operates nine hydro plants and two diesel plants, the latter located on the Burin Peninsula. A subsidiary, the West Coast Power Company, operates diesel generators at St. George's and Port aux Basques, and a hydro plant at Lookout Brook. The Union Electric Light and Power Company operates plants at Clarenville, Port Union and Trinity.

Power plant construction recently completed or under way is outlined at p. 608.

Prince Edward Island.—The area of Prince Edward Island is only 2,184 sq. miles and, as 75 p.c. of its population lives in rural areas, electric power must be supplied to thickly populated rural districts interspersed with a considerable number of small municipalities. There is little opportunity for the development of hydro-electric power in the province since the rivers are short, drainage areas are small and the country is relatively flat. Therefore, power is generated mainly in thermal and diesel plants using imported fuels.

The Maritime Electric Company supplies 59,350,340 kwh. of the Island's power consumption of 67,282,200 kwh. with a system peak of 13,900 kw. from its Charlottetown plant. The plant consists of six steam turbines of 22,365 kw. total capacity. In 1958 the Company served 12,472 rural and urban customers over approximately 850 miles of Company-owned distribution line, with an additional 2,613 customers being served by 551 miles of distribution line owned by the provincial government and connected to the Company system. In addition, the Company supplies 6,899,240 kwh. of energy annually to the Town of Summerside Electric Light Department.

Two other power systems supply the remainder of the power consumed in the province. The Town of Summerside Electric Light Department operates a station in Summerside which is powered by nine diesel engines with a total capacity of 2,835 kw. and has an annual

* Revised by the various provincial commissions or authorities concerned.

energy production of 3,391,960 kwh. This system serves 2,175 customers within the corporate limits of the town and 824 customers over 75 miles of rural lines plus an additional 325 rural customers over 64 miles of lines owned by the provincial government. The Summerside station also supplies 712,500 kwh. of energy annually to the Scales Hydro-Electric Company Limited.

The Scales Hydro-Electric Company Limited operates a small station in Freetown on the Dunk River. Its total capacity is 250 kw., 175 kw. of which is generated by water power and the remainder by diesel engines. The annual energy production is 539,900 kwh. and 714 customers in surrounding areas are served over 29 miles of distribution line.

Nova Scotia.—The Nova Scotia Power Commission was created under the Power Commission Act of 1919 with the function of supplying electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing financial assistance to equalize cost and revenue of extensions approved by the Governor in Council. In 1941 an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the province. Certain investigatory work is carried on in the province by the Federal Government in close association with the Commission, but the control of water resources is vested in the Crown and administered under the provisions of the Nova Scotia Water Act of 1919. The Commission pays regular fees for water rights.

Financially the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1958 showed total fixed assets of \$51,685,234 including work in progress amounting to \$5,489,301. Current assets amounted to \$795,856. Liabilities were as follows: fixed \$42,224,276; current \$2,895,063; contingency and renewal reserves \$4,870,684; sinking fund reserves \$8,491,987; and general and special reserves \$2,090,766.

The initial development of the Commission was an 800-hp. installation on the Mushamush River which went into operation in 1921 and delivered 208,752 kwh. in the first complete year of operation. Succeeding years showed a marked growth in installed capacity which at Nov. 30, 1958 reached 113,000 hp. in hydraulic turbines, 2,200 hp. in diesel units and 40,000 kw. in steam turbines. Total generation for the year was 500,364,514 kwh.

The territory of the Commission extends over the entire province and embraces six systems which include 23 generating stations and more than 4,500 miles of transmission and distribution lines through which wholesale and retail customers received 499,816,954 kwh. during the year ended Nov. 30, 1958. Power plant construction recently completed or under way is outlined at p. 608.

Power plant construction recently completed or under way in New Brunswick is outlined at p. 608.

Quebec.—*The Quebec Streams Commission.*—Created by SQ 1910, c. 5, and given additional powers in 1912 (RSQ 1925, c. 46) and SQ 1930, c. 34, the Quebec Streams Commission was authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct and operate certain storage dams to regulate the flow of streams. It assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on meteorological conditions, by investigation of numerous water power sites and by the determination of the longitudinal profile of a large number of rivers.

On Apr. 1, 1955, the Quebec Streams Commission was abolished and its powers and attributions transferred to the Hydraulic Resources Department, Province of Quebec. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lievre, the St. Francis, the Chicoutimi, the Au Sable, and the Métis. The Commission also operated nine reservoirs on North River, two in the watershed of the Ste. Anne de Beaupré River, and one at the outlet of Lake Morin on Rivière du Loup (lower).

Other Reservoir Control.—Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River; Témiscouata Lake on the Madawaska River, controlled by the Gatineau Power Company; Memphremagog Lake on the Magog River, controlled by the Dominion Textile Company; Témiscamingue and Quinze Lakes on the Ottawa River, controlled by the federal Department of Public Works; Kipawa Lake on the Ottawa River, controlled by the Gatineau Power Company; and Dozois Lake on the upper Ottawa River and Pipmaukin Lake in the Bersimis River watershed, controlled by the Quebec Hydro-Electric Commission.

Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John reservoirs, have a total capacity of 1,950,000 hp.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was established by SQ 1944, c. 22, with the object of supplying power to the municipalities, to industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration. The Commission at the end of 1959 controlled, among other assets, the following hydro-electric plants: *—

<u>Plant</u>	<u>River</u>	<u>Installed Capacity</u>
		hp.
Cedars.....	St. Lawrence.....	206,400
Sault au Recollet.....	Rivière des Prairies.....	60,000
Beauharnois.....	St. Lawrence.....	1,694,000

Rapid II.....	Upper Ottawa.....	48,000
Bersimis No. 1.....	Bersimis.....	1,200,000
Bersimis No. 2.....	Bersimis.....	900,000

The Commission operates a public utility system which supplies the electric light and power requirements of Metropolitan Montreal and surrounding districts, embracing a population of nearly 2,000,000. From the Cedars plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through the Beauharnois Light, Heat and Power Company power is sold to The Hydro-Electric Power Commission of Ontario. Sales involved are in the neighbourhood of 100,000 hp. to Massena, N.Y., and 250,000 hp. to Ontario.

* The Commission also purchases 135,000 hp. from the Shawinigan Water and Power Company.

16.—Growth of the Quebec Hydro System, 1950-59

NOTE.—Figures for the years 1935-46 will be found in the 1950 Year Book, p. 572, and for the years 1947-49 in the 1957-58 edition, p. 579.

The Commission delivers some 30,000 hp. on the south shore of the St. Lawrence River in the Gaspé area—power from its Bersimis plants transmitted across the River through a 69-kv. submarine cable, over a distance of 34 miles. The Commission also purchases about 25,000 hp. from Saguenay Transmission Company for delivery to mining companies in the Chibougamau area. It has completed the construction of a storage reservoir on the Toulmoustou River, a tributary of the Manicouagan River on the North Shore. The Lac Ste. Anne reservoir, as it is called, will permit regulation and control of the flow of the Lower Manicouagan River.

Power plant construction recently completed and under way in Quebec is outlined at pp. 608-609.

Ontario.—The Hydro-Electric Power Commission of Ontario is a corporate entity, a self-sustaining public enterprise endowed with broad powers with respect to the supply of electricity throughout the Province of Ontario. Its authority is derived from an Act of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier advisory commissions that the water powers of Ontario should be conserved and developed for the benefit of the people of the province. It now operates under the Power Commission Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified from time to time (RSO 1950, c. 281, as amended). In addition to administering the enterprise over which it has direct control, the Commission exercises certain regulatory functions with respect to the province-wide group of municipal electrical utilities which it serves.

The Commission may have from three to six members, all of whom are appointed by the Lieutenant-Governor in Council. One commissioner must be, and a second commissioner may be, a member of the Executive Council of the Province of Ontario. In the conduct of the Commission's affairs, the commissioners are responsible for, and are the final authority in, establishing policy.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power systems, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, over a period of nearly forty years the province has materially assisted the development of agriculture by contributing half the capital cost of rural distribution facilities.

For the financial and administrative purposes of the Commission, the province is divided into two parts.* The roughly triangular part of the province lying south of Lake Nipissing and the French and Mattawa Rivers is served by the Southern Ontario System, a fully integrated power network comprising the Niagara, Eastern Ontario and Georgian Bay Divisions. The part lying to the north is served by the Northern Ontario Properties, comprising the Northeastern and Northwestern Divisions. The Southern Ontario System is a co-operative system primarily serving a group of 327 municipalities receiving power at cost under contracts established according to the provisions of the Power Commission Act. The Northern Ontario Properties are not a co-operative system but the power facilities of its Northwestern Division serve a group of eight municipal utilities at cost. Apart from the supply of power to these cost-contract customers, the Northern Ontario Properties are held and operated in trust for the Province of Ontario. Each of the two northern divisions is an integrated power system, the Northeastern Division being also interconnected with the Southern Ontario System. For purposes of administration the whole area served by the Commission is subdivided into nine regions, seven in the south and two in the north, with regional offices located in nine major municipalities. At present the two northern regions coincide with the Northeastern and Northwestern Divisions.

The Commission is concerned primarily with the generation and purchase of power and its delivery in bulk over a province-wide network of transformation and transmission facilities. The sale of bulk power accounts for about 90 p.c. of the Commission's total kilowatt-hour sales. This power is delivered either for resale by other utilities, or for ultimate use in the industrial operations of some 200 customers served directly by the Commission. Deliveries for resale are made to the associated municipal electrical utilities, and to certain interconnected systems (some of them independent municipal systems) operating within or beyond the provincial boundaries. The municipal utilities, in their turn, administered by local commissions and functioning under the general supervision of the Provincial Commission, own and operate their own distribution systems to serve ultimate customers in most cities and towns, in many villages, and in certain township areas. Energy sales representing the remaining 10 p.c. of the Commission's total are carried out through Commission ownership and operation of distribution facilities. These facilities provide retail service on behalf of the various townships to ultimate customers in the rural areas of the province, and similar service to customers in a limited number of municipalities supplied by what are known as "Local Systems".

The growth of the Commission's physical and financial resources reflects the remarkable industrial and social development of the province. In 1914 the Commission purchased its first generating station—Big Chute on the Severn River. Later in the same year the first Commission-built generating station was placed in service at Wasdell Falls, also on the Severn River. This early program of purchase and construction of generating stations reached a climax in the great Queenston-Chippawa development, later renamed Sir Adam Beck-Niagara Generating Station No. 1 in honour of the first Chairman of the Commission. This station first delivered power in 1922 but four years later the Commission found it necessary to negotiate for the extensive purchase of power from large Quebec suppliers in order to satisfy Ontario's steadily growing power demands—demands that have continued to increase over the years. As requirements for power increased throughout the province, the Commission extended the scope of its service both by the purchase and integration of separate systems already in operation, and by the construction of new generating and distributing facilities.

The Commission's power development program as at Dec. 31, 1958 is given in Table 18. Hydro, thermal and nuclear power plant construction recently completed or under way in Ontario is outlined at pp. 609-610.

* Information relating to the establishment of the original administrative systems and to the consolidations leading to the present operating set-up is given in the 1957-58 Year Book, p. 580.

¹ Dependable peak capacity—the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

20.—Distribution of Power to Systems of The Hydro-Electric Power Commission of Ontario, Years Ended Dec. 31, 1954-58

NOTE.—Peak load generated and purchased, primary and secondary, in terms of generation.

¹ Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

During 1958 the Commission's investment in fixed assets increased by \$177,368,920 and at the end of the year amounted to \$2,107,975,634. Total assets after deducting accumulated depreciation were \$2,421,226,156.

In 1958 a total of 354 municipal utilities engaged in the retail distribution of electricity purchased power from the Commission under cost or fixed-rate contracts. The total assets of these utilities, after deducting accumulated depreciation, amounted to \$554,268,427, of which \$218,736,441 represented the equity acquired in the Commission's systems by the utilities operating under cost contracts.

Manitoba.—The Manitoba Power Commission, founded in 1919 by an Act of the Provincial Legislature, is charged with the responsibility of distributing electric energy throughout most of the province, with the exception of the Metropolitan Winnipeg area. In 1955 the Commission acquired, from the privately owned Winnipeg Electric Company and the City of Winnipeg Hydro Electric System, the distribution facilities serving the suburban areas immediately adjacent to the city. The Commission acts as a distributing agency only, purchasing electric energy "in bulk" from the Manitoba Hydro-Electric Board. Its more than 32,000 miles of transmission lines serve 532 cities, towns and villages. In addition, 42,093 farms, representing over 95 p.c. of the total resident occupied farms in the province, are electrified. In 1958 the Commission moved into the northern section of the province by acquiring the distribution and generating facilities at The Pas. This northern expansion has continued during 1959 when Cranberry Portage and the new mining centre of Thompson were added to the group of communities served.

Plant additions recently completed or under way in Manitoba are outlined at p. 610.

Saskatchewan.—The Saskatchewan Power Corporation was established Feb. 1, 1949, and now operates under the provisions of the Power Corporation Act (SS 1950, c. 10) as amended. It succeeded the Saskatchewan Power Commission which had operated from Feb. 11, 1929. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952, the Corporation has been authorized to produce or purchase, and to transmit, distribute, sell and supply natural or manufactured gas.

In 1958, the Corporation served 875 urban communities (with six or more customers) in retail sales, and served the cities of Saskatoon, Swift Current and Weyburn, the town of Battleford and the hamlet of Waskesiu in bulk sales. Activities of the Corporation are extended to the entire province with the exception of such cities as Regina which owns and operates municipal plants and a distribution system, and Moose Jaw where the local plant and distribution system is owned and operated by National Light and Power Company Limited.

During the year, the distribution system and generating facilities of the town of Kamsack were purchased and added to the SPC system. At the end of 1958, the Corporation served 188,293 customers, 154,728 of whom were retail customers and 33,565 of whom were located in communities supplied with power through bulk sales. The retail customers included 104,173 urban customers and 50,555 customers classified as rural, predominantly farmers. During 1957, all customers absorbed 909,086,629 kwh., of which 880,721,720 kwh. were generated in Corporation plants and 28,364,909 kwh. were bought in bulk from Regina and from National Light and Power Utilities. At the end of the year, the Saskatchewan Government had invested a total of \$184,956,973 in Corporation electric and natural gas assets.

During 1958, the Corporation owned and operated four steam generating plants, one each at Estevan and Prince Albert and two at Saskatoon. These plants supplied 79.1 p.c. of total system power requirements. Three internal combustion gas and dual fuel plants at Kindersley, Swift Current and Unity supplied most of the remainder. Seven small diesel plants (at Leader, Central Butte, Meadow Lake, Yorkton, Kamsack, Hudson Bay and La Ronge) acted mainly as standby plants. Total system capability at the end of 1958 was assessed at 327,260 kw., with 275,000 kw. located in steam plants, 46,000 kw. in gas and dual fuel installations and 6,260 kw. in diesel plants.

By the end of 1958, the Corporation owned and operated 59,935.5 miles of transmission and rural lines (excluding urban distribution and hi-lines), 5,547.5 miles of which were added in 1958. Forty-eight miles of three-phase transmission line for service to oilfields were also installed and service extended to 352 oil-well pumping units of various classes. Five switching stations were completed and energized.

Plant additions recently completed or under way in Saskatchewan are outlined at p. 610.

22.—Growth of the Saskatchewan Power Corporation, 1949-58

Alberta.—Public ownership of power generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners which has jurisdiction over the distribution and sale of electricity. The Board has power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

There are three private utility services in the province: Calgary Power Limited, Canadian Utilities Limited, and Northland Utilities Limited. A synopsis of these services is given below; plant additions recently completed or under way are outlined at pp. 610-611.

Calgary Power Limited.—This Company has 11 hydro generating plants on the Bow River and its tributaries, west of Calgary: Horseshoe Falls, Kananaskis Falls, Ghost River, Cascade, Barrier, Spray, Rundle, Three Sisters, Bears paw, Pocatererra, and Interlakes. The Company also operates a steam plant of 176,000 hp. at Wabamun, west of Edmonton. At Dec. 31, 1959, the Company's total plant capacity was 485,450 hp. All the hydro plants except Bears paw are operated by remote control from the Kananaskis Falls plant.

The Company has five reservoirs on the Bow River and its tributaries:—

Lake Minnewanka.....	180,000 acre-feet
Interlakes (Upper Kananaskis Lake).....	100,000 acre-feet
Pocatererra (Lower Kananaskis Lake).....	50,000 acre-feet
Spray Lakes.....	200,000 acre-feet
Ghost.....	74,000 acre-feet

An agreement with the City of Medicine Hat provides an additional 33,500 hp. to the Company from the city's steam plant. Power from these plants is fed into a transmission network which supplies the entire electricity requirements of the cities of Calgary, Red Deer, Wetaskiwin and Camrose, about 436 towns, villages and hamlets, and a substantial industrial load in central and southern Alberta. This transmission network is also connected with the municipal utilities of the cities of Edmonton and Lethbridge, Canadian Utilities Limited at Drumheller, Vegreville and Vermilion, and the East Kootenay Power Company in the Crownsnest Pass.

The Company has about 4,900 miles of main transmission lines and 3,100 miles of distribution lines extending from Plamondon in the north to Milk River and Waterton in the south, and from Chauvin, Macklin (Sask.), Brooks and Bow Island in the east to Nordegg, Banff and Crownsnest Pass in the west. The cities of Calgary and Red Deer and the towns of Ponoka, Fort Macleod and Cardston are supplied on a wholesale basis, but all other points on the same system are supplied on a retail basis. At Dec. 31, 1959, electric pumping service was being supplied to more than 3,900 oil wells, as well as direct service to such other sectors of the oil industry as gathering stations, refineries and pipeline pumping. Several industrial plants near Edmonton were also served.

An extensive farm electrification program is in progress in Alberta and at Dec. 31, 1959 the Company was serving 35,018 farms. Calgary Power constructs, operates and provides for the engineering of these co-operatives through a non-profit subsidiary (Farm Electric Services Limited) and energy is supplied to the farm co-operative consumers at cost.

Canadian Utilities, Limited.—This Company supplies three areas in the province: the Grande Prairie District, outlined by Hythe, Spirit River, Lesser Slave Lake, Smith, Fox Creek and the city of Grande Prairie; the Vegreville District, outlined by Vermilion, Vegreville, Smoky Lake, Cold Lake and the city of Lloydminster; and the Drumheller District, outlined by Three Hills, Stettler, Forestburg, Consort, Empress, Cessford and the city of Drumheller. Three interconnected plants at Battle River, Vermilion and Drumheller supply the Vegreville and Drumheller districts. The Battle River plant has a 32,000-kw. coal-fired steam unit; the Vermilion plant has a 8,500-kw. gas turbine (the first gas turbine powered generator in Canada) and 9,000 kw. in gas-fired steam equipment; and the

Drumheller plant has 19,000 kw. in coal-fired steam equipment. Three interconnected plants at Grande Prairie, Fairview and Sturgeon Lake supply the Grande Prairie District. The Grande Prairie plant has 5,700 kw. in diesel and gas-diesel equipment; at Fairview there is a 1,200-kw. natural gas unit, and at Sturgeon Lake a 10,000 kw. gas turbine which uses sour flare gas from nearby oilfields as fuel. The town of Smith is served separately by a 425-kw. diesel installation. In 1959 the Company installed 150 kw. in diesel units to serve the settlement of Fort Chipewyan on Lake Athabasca.

There are tie lines with Calgary Power Limited at Vermilion, Vegreville and Drumheller; and with Northland Utilities Limited at Fairview and Valleyview. The Company serves more than 41,500 customers (covering approximately 33,000 sq. miles, including 225 towns, villages and hamlets, and 131 rural electrification associations) through a network of approximately 3,900 miles of transmission and distribution lines, and 10,000 miles of Rural Electrification Association lines.

Since 1949, rural electrification in the territory served has been extended to more than 10,400 farmers on a co-operative basis whereby the Rural Electrification Association systems are constructed and operated at cost for the farmers. In addition, the Company operates three subsidiaries, McMurray Light and Power Co. Limited, with a 525-kw. installation, serving 330 customers in the town of McMurray; and Yukon Hydro Company Limited and the Yukon Electrical Company Limited, operating three installations consisting of 1,650 kw. in hydro units and 1,100 in diesel units serving 1,580 customers in the Whitehorse, Haines Junction, and Watson Lake areas of the Yukon Territory.

Northland Utilities Limited.—This Company, with headquarters at Edmonton, supplies electric service to 9,700 customers located in 33 communities. Diesel or gas-fueled generating plants are located in Jasper, Athabasca, High Prairie, Fort Vermilion, McLennan, Peace River, Fairview and Lac la Biche in Alberta, and at Hay River in the Northwest Territories. A hydro-electric generating plant augments the supply at Jasper. Through 175 miles of 69,000-volt transmission line and 250 miles of 24,000-volt transmission line, service is distributed to 27 additional communities and approximately 2,000 farm customers are served by rural co-operative lines. A subsidiary, Uranium City Power Company Limited, generates and distributes electricity to 600 customers in Uranium City, Sask.

Northland Utilities supplies 3,500 customers with natural gas in 15 communities in northern Alberta—Fairview, Bluesky, Whitelaw, Brownvale, Berwyn, Grimshaw, Grande Prairie, Spirit River, Sexsmith, Rycroft, Woking, Clairmont, Peace River, High Prairie and Jasper. A subsidiary, Northland Utilities (B.C.) Limited, supplies gas to 2,500 customers in Dawson Creek and Pouce Coupe, B.C.

British Columbia.—The British Columbia Power Commission was appointed Apr. 17, 1945 under the provisions of the Provincial Electric Power Act. Operations were commenced in August of the same year with the acquisition* of electrical properties in several parts of the province. The following statement shows the growth in the number of customers from 1949 to 1959:—

Year Ended Mar. 31—	Services Acquired	Services Installed	Total Services for Period	Cumulative Services to End of Period
	No.	No.	No.	No.
1949.....	831	3,318	4,149	31,619

1958.....	—	5,706	5,706	75,280
1959.....	75	4,506	4,581	79,861
TOTALS.....	32,532	47,329	79,861	79,861

During the year ended Mar. 31, 1959, there was a marked reduction in the rate of capital expenditure by the Commission as compared with the previous two fiscal years. Expenditure during this period totalled \$18,483,000 as against the all-time high in 1957-58 of \$51,341,000. As a result of recent expansion, the Commission, for the first time in several years, had sufficient capacity to meet all current and immediately foreseeable demands upon its system. (Details of construction recently completed or under way are outlined on p. 611.) Revenue in 1958-59 increased by 17.9 p.c. over 1957-58 and expenses by 13.3 p.c. Net operating surplus amounted to \$97,492 after provision for hydro deficiency reserve.

The Northwest Territories and Yukon Territory.—The Northern Canada Power Commission was created by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include Yukon Territory. The name of the Commission, formerly Northwest Territories Power Commission, was changed in 1956.

The Northern Canada Power Commission has authority to construct and operate power plants as required in the northern territories and, subject to approval of the Governor in Council, in any other parts of Canada.

The Commission has hydro-electric power developments on the Yukon River near Whitehorse, Y.T., the Mayo River near Mayo Landing, Y.T., and the Snare River northwest of Yellowknife, N.W.T. Diesel-electric plants are operated at Fort Simpson, Fort Smith and Inuvik, N.W.T., at Field, B.C., and at Frobisher Bay, N.W.T., where the plant is owned by the Department of Transport.

The Whitehorse Rapids Power Development went into service in November 1958, and supplies all the power for the Department of National Defence at Whitehorse, a large part of the power for the city of Whitehorse, and the power for the heating systems of the Department of National Health and Welfare Hospital and two hostels operated by the Department of Citizenship and Immigration.

The Snare River Rapids plant has supplied power to the mines in the Yellowknife area since September 1948 and, with the Bluefish hydro-electric plant of the Consolidated Mining and Smelting Company of Canada Limited, supplies the town of Yellowknife.

The Mayo River plant, completed in November 1952, supplies power to mining properties in the Elsa and Keno areas and to the Mayo Landing and Keno City communities.

The diesel-electric plants supply the needs of Federal Government departments and general residents of the communities in which they are located. In addition to these plants, the Commission operates a power and heating plant at the Fort McPherson residential school for the Department of Northern Affairs and National Resources. Recently completed and projected construction is outlined at p. 610.

PART I.—FISHERIES

Section 1.—Fishery Resources

Canada has the enviable position of being the country closest to some of the world's most prolific fishing grounds and as a consequence is a principal fish producer and exporter of fish products. Rich harvests are drawn from the Atlantic and Pacific Oceans and from the country's many freshwater lakes and rivers. The following special article, which gives a detailed account of Canada's commercial fisheries resources, places special emphasis on the conservation aspect of the responsibilities of the Department of Fisheries of Canada.

CANADA'S COMMERCIAL FISHERY RESOURCES AND THEIR CONSERVATION*

Every year Canadian fishermen take some 2,000,000,000 lb. of fish and shellfish from the salt and fresh water available to them off the Pacific and Atlantic Coasts and in the rivers and lakes of the inland provinces. The marketed value of this catch is in excess of \$200,000,000. Two-thirds of the output is shipped abroad, putting Canada in third place among the fish-exporting nations, surpassed only by Norway and Japan. The primary fishing industry in Canada supports the families of over 79,000 fishermen, and many thousands of persons employed in processing plants, in transporting and marketing enterprises and in ancillary industries also benefit in varying degrees.

With direct access to three of the world's five oceans, Canada with its coastal islands has a sea front of about 60,000 miles, which is more than twice the length of the equator. Even more remarkable, 260,000 sq. miles of lakes and rivers, half the fresh water of the entire earth, are within Canadian boundaries.

Pacific Fisheries.—On the Pacific, salmon provides the most valuable catch and herring the heaviest landings. Halibut is third in importance, followed by groundfish and shellfish. In 1958, a high year in salmon cycles, total landed value of the Pacific

* Prepared by the Information and Educational Service, Department of Fisheries, Ottawa.

catch exceeded \$50,000,000, of which salmon accounted for \$37,000,000. Lower landings of salmon in 1959 caused a 30-p.c. drop in the value of the Pacific catch, which amounted to a little less than \$35,500,000.

The salmon catch comprises five species—sockeye, pinks, chums, cohos and springs. These fish are caught as they return from the sea to their native streams to spawn and die. Sockeye, for instance, return after four years at sea so that, four years after a favourable hatching year on sockeye streams, a heavy catch of this species may be expected. When the peak runs of several different species occur in the same year, fishing is very good. The fish congregate off the mouths of their rivers and move into them in heavy concentrations. Commercial salmon fishing is limited to tide-water and is divided into two efforts—net fishery by seine and gillnet for the canneries and troll fishery for the fresh fish market. Net fishing is pursued in all the protected waters of British Columbia's deeply indented shoreline, and troll fishing off coasts facing the open sea, especially off the western coast of Vancouver Island.

After hatching, sockeye spend a year or two in a lake before going to sea. When caught on their return from the ocean they weigh about six pounds each. This is a summer fishery, usually from mid-June to September; the bulk of the catch is taken by gillnet and the remainder by purse-seine. As sockeye feed on small crustaceans, they are not attracted by the lures of the troll fishery. Landings are smaller than the catch of chums or pinks but more valuable because, with its firm texture and attractive colour, canned sockeye commands the highest consumer price.

Pink salmon mature and return after only two years at sea. The fish average four⁶ to five pounds. Both pinks and chums are widely distributed up and down the coast but pinks appear in a more concentrated run. Chums return after four years at sea when they average about ten pounds in weight. They usually appear in two rather scattered runs, one in early summer and one in the autumn, and contribute somewhat more than pinks to the total volume of the salmon catch.

Coho hatch in small streams and are vulnerable to summer water levels. At sea they grow rapidly to weights between five and ten pounds and return to spawn after three years. They are taken by net or troll for canning or for the fresh market, depending on current demand.

Mature spring salmon usually run between ten and twenty-five pounds in weight. Since they feed on small fish, they can, like coho, be taken by lure but about one-third of the catch is secured with gillnets, notably at the mouth of the Fraser. They are usually caught in their third or fourth year and are favoured on the fresh fish market.

About three-quarters of the annual salmon catch is canned and most of the remainder goes to the fresh market. Vancouver and Prince Rupert are the main processing centres. Hundreds of seiners and thousands of gillnet and troll boats engage in the fishery every year.

The 1959 catch of Pacific herring amounted to 443,000,000 lb. valued at more than \$7,000,000. The main stocks of the species move inshore in the autumn and winter, spawn in the spring and then return to summer feeding grounds offshore. Only small stocks remain on the fishing grounds throughout the year. Consequently the bulk of the catch is taken from October to March. As the total known supply of this species in British Columbia is being exploited, catches are limited to local quotas by area. Fishing is by purse-seine and the catch is converted into oil and meal, mainly at Steveston, Vancouver or Prince Rupert.

While salmon and herring live at mid-water depths, halibut feed on the bottom and are usually caught beyond the three-mile limit. Canadian and American longliners share in this fishery off both Alaska and British Columbia and, by joint agreement, it is controlled by a system of catch quotas and fishing seasons in various areas. The most productive halibut grounds on the Continent are those adjacent to British Columbia, and American as well as Canadian vessels, even when fishing off Alaska, usually land at Prince

Rupert or Vancouver. Because of bad weather and for other reasons, halibuting did not reach peak activity in 1959 but Canadian fishermen caught about 30,000,000 lb. with a landed value of between \$5,000,000 and \$6,000,000. Much of the fish is frozen for the fresh market in the United States.

Two other species of bottom-feeding fish—soles and grey cod—are taken by the trawler fleet, usually beyond the three-mile limit either in Hecate Strait or off Vancouver Island. These vessels drag a large-mouthed, tapering net across the ocean floor and scoop up the fish feeding there. They operate mainly in the spring and summer and on smooth bottom in depths between twenty and seventy fathoms. During the winter they pursue a limited fishery in the relatively protected waters of the Strait of Georgia. Ling cod and black cod also feed on the bottom. Small boats rigged with one or two lines and a few hooks take most of the ling cod catch in the Strait of Georgia but further supplies are captured together with other groundfish in course of the trawler fishery. The bulk of the black cod is taken off Alaska by the large longliners which also fish for halibut. These vessels lay their long lines on the ocean floor with hundreds of baited hooks attached to them.

All groundfish, including halibut, are marketed mainly in filleted or steak form, usually fresh or frozen but occasionally smoked.

Canada's Pacific groundfishery developed rapidly during and just after World War II when there was world-wide urgent need for greater protein food supplies. Expanding from almost negligible proportions in the prewar decade, landings now often exceed 20,000,000 lb. annually. One feature of this growth, especially recently, has been an increasing trade in coarse fish for mink feed.

British Columbia also has a considerable shellfish resource, including crabs, oysters, shrimps and clams. The crab fishery, centred in the northern Queen Charlotte Islands, has developed in response to steady market demand. Crabs are trapped from the low-tide mark to a depth of about 120 feet and are marketed either fresh or canned. The oyster industry is predicated on yearly import of spat from Japan, native supplies having been fished out many years ago and attempts to transplant Atlantic oysters having achieved very limited success. The present fishery is located in the Strait of Georgia. The oysters are larger than the Atlantic variety and are not eaten raw. They are shucked for market and sold fresh or frozen. Shrimp trawling in the Strait of Georgia is an off-season source of income for salmon troll or gillnet boats. Shrimps are cooked before the meat is taken from the shell to be sold fresh or frozen. Razor clams occur in the Queen Charlottes and butter clams in many small areas of suitable beach along the full length of the coast. Both kinds are dug by Indians and canned. Little neck clams, virtually limited to Vancouver Island, are mainly exported fresh to the United States market.

Earnings of British Columbia fishermen fluctuate widely with the ups and downs of the salmon and herring fisheries. Landings in 1958 included nearly \$40,000,000 worth of salmon, \$7,000,000 worth of herring and \$6,000,000 worth of halibut, together with groundfish and shellfish catches worth upwards of \$1,000,000 each. In 1959 the values were similar except for salmon; the exceptionally good salmon figure for 1958 was almost halved in 1959. Processing more than doubles all these values.

Atlantic Fisheries.—On the Atlantic Coast groundfish, especially cod, and lobsters are the mainstay of the fisheries, while herring, mackerel and alewives supply a pickling industry which is also of considerable importance. The Atlantic catch is ordinarily about twice as heavy as the Pacific and, generally, is more valuable.

The cod banks in the Atlantic off Newfoundland are known to fishermen all over the world. Besides cod, they yield other groundfish, mainly haddock, redfish, plaice and flounder. Although two-thirds of the cod catch is landed in Newfoundland, the lesser part of the Island's receipts now come from the banks. The traditional Newfoundland schooner fishery which formerly supplied the saltfish trade has died out but a very active inshore summer trap fishery, followed by a trawl fishery from small boats in the late summer

and early autumn, continues to supply the industry. The bulk of the trap and trawl catches is salted. The family business which combines fishing with processing has disappeared from the Atlantic Coast except in Newfoundland, and even there it is diminishing. Nova Scotia's drying plants depend more and more on raw supplies from Newfoundland, which they receive in salt bulk form. Heavy exports of saltfish go from the Atlantic Provinces to the Caribbean area, with smaller amounts to Italy, Spain and Brazil.

Although schooner fleets are a thing of the past, except for a few vessels sailing from Nova Scotia, modern trawlers and draggers out of ports along the southern coast of Newfoundland and the Atlantic Coast of Nova Scotia fish the banks in all seasons, weather permitting, to supply mixed groundfish to the processing plants in their home ports. These produce fresh and frozen fish and fillets as well as frozen fish blocks to meet a North American demand which increases steadily with the population. The frozen blocks are the raw material of the now important fish-stick industry.

In 1959 the lobster catch amounted to 46,000,000 lb. and the cod catch to 642,000,000 lb., each estimated to have a landed value of about \$17,000,000. With their relatively high unit prices, lobsters are the main source of income for fishermen in New Brunswick and Prince Edward Island, besides providing about one-third of the value of the Nova Scotia catch. They are taken in baited traps as they crawl about in shallow water looking for food. Most of the catch is marketed alive, fresh boiled or as fresh or frozen lobster meat. The remainder is canned. The United States provides an excellent market with peaks of demand in the summer vacation season and at Christmas. Hitherto unexploited scallop beds, recently discovered on George's Bank off the mouth of the Gulf of Maine, are becoming an increasingly valuable resource. In 1959 nearly 5,000,000 lb. of scallop meat were produced, with a landed value of \$1,900,000.

The annual Atlantic herring catch is around 225,000,000 lb., about one-third of which is comprised of the small-sized herring used by New Brunswick's sardine canneries. Smoke houses and pickling plants produce a variety of herring products and the fish are also in steady demand for lobster bait. The bulk of the catch is taken in purse-seines or weirs. Mackerel and alewives are also utilized by pickling plants but both have provided dwindling catches over the past decade. Mackerel are netted in open water and alewives are trapped as they enter estuaries on their way to freshwater spawning beds.

The Atlantic salmon catch, after a long and fairly steady decline, increased in 1958 and again in 1959. This fish goes exclusively to fresh markets. Before the War, frozen Canadian Atlantic salmon was in demand in the United Kingdom. Since the War it has been barred from that market by import restrictions and there has been scant surplus for export in any case. In 1959, however, the import restrictions were lifted and, with improved catches, hopes rose for resumption of this trade.

Inland Fisheries.—In 1958 Canadian fish exports to the United States were valued at \$103,000,000. Fresh fish, round or filleted and usually frozen, accounted for \$87,000,000 of this amount. Included in the latter was \$21,000,000 worth of fish from inland lakes and streams. The bulk of the catch comes from the Great Lakes, Lake Winnipeg in Manitoba and Great Slave Lake in the Northwest Territories but six hundred smaller lakes also are fished commercially. Ontario is the heaviest producer, with Manitoba in second place and Saskatchewan in third but output of all western areas is increasing as improved transportation facilities enable fishermen in remote areas to get their catch to market. Great Slave Lake yields almost all the commercial catch of the Northwest Territories. It supports a gillnet fishery for whitefish and lake trout, with catch limits set by the Federal Government.

Whitefish and pickerel, in approximately equal proportions, together comprise about half the Canadian freshwater catch. Perch is next in both quantity and value. Sturgeon and lake trout are valuable additions and tullibee and pike are taken in considerable quantities. A wide variety make up the remaining 10 p.c. of the landings, ranging from the aristocratic goldeye to the lowly chub.

Conservation of the Fisheries.—The resources upon which the fisheries are based, in both Canadian waters and international waters within reach of Canadian fishing craft, require constant conservation and development. The federal Department of Fisheries is responsible for such conservation and development,* although it has delegated administrative rights to some of the provinces.

Fish populations are exposed to many threats, natural and man-made. Seafish, such as salmon, which come into fresh water to spawn, are particularly vulnerable. A natural rock slide or a man-made high dam may bar them from their spawning grounds if precautions are not taken. Fish are subject to natural disease or may be destroyed by the man-made poisons of industrial development, now expanding so rapidly in the Canadian west and north. A species may be badly affected by natural predators or by overfishing; increased mobility and efficiency of modern fishing fleets intensify the latter problem.

Because of their high value and great vulnerability, salmon stocks receive major consideration. Arrivals of spawning runs have been studied and can now be predicted with fair accuracy. Streams are cleared of obstructions before the fish arrive. An obstruction may be anything from a beaver dam to a mountain rock slide or a hydro-electric power plant. The beaver dam can be cleared away; the rock slide may be tunnelled or bypassed by an artificial fishway; the power plant may require a fish ladder constructed like a stairway of small locks to break one steep ascent into many smaller ones which the fish can readily negotiate. A small change in water level may be of life-and-death importance to fish in a stream. In a hot summer, fingerlings may be stranded in pools which are drying up. Sudden release of water from an upstream reservoir may drown the sandy shallows of a spawning ground or wash the sand out of it. Consequently, officials of the federal Department constantly review applications for water and foreshore rights, stream-bed leases and certain mining leases to determine whether they will be detrimental to local fish stocks. They also arrange with industrial plants for the maintenance of adequate flow and the screening of water intakes.

They co-operate, for instance, with the Fisheries Section of the Fraser River Board, studying flood control measures and effects of possible hydro-electric development. In Newfoundland they are making an important river system an attractive home for spawning salmon by removing obstructions, constructing and maintaining fishways and preparing sandy shallows for deposit of eggs. Adult salmon transferred to the new locale are adapting well to it and later generations hatched there will return naturally. In the same way, salmon runs to the Maritime Provinces are being rebuilt. Hatcheries collect eggs, rear the young and distribute them to desirable locations.

New Brunswick's valuable commercial oyster stocks and adjacent ones in Nova Scotia were almost wiped out a few years ago by disease (not harmful to humans). A resistant strain from Prince Edward Island is being successfully transplanted to replace the loss. Six thousand barrels of oysters have already been moved.

Waste from mining or chemical industries, sewage disposal and insecticide spray programs poison streams and kill thousands of fish. Such dangers must be detected and their ill effects neutralized. With radioactive fallout and the problem of disposal of radioactive wastes, this danger may soon extend to the open ocean.

Precautions are taken against predators. A bounty is paid on harbour seals, which prey on Atlantic salmon runs. The price of dogfish livers is subsidized on the Pacific Coast to reduce the numbers of this species on certain fishing grounds. Sea lampreys in the Great Lakes destroyed almost all the lake trout in most of the fishing areas before an eradication program could be organized, but it is now hoped that a poison specific to lampreys can bring them under control and make it possible to rehabilitate the trout.

* The functions and services of the Department of Fisheries are outlined at pp. 631-632, and those of the Fisheries Research Board at p. 634.

The most powerful enemy to fish, however, is modern fishing gear. Whenever vulnerable stocks are concerned, fishing may be limited as to time and place, kind of gear, size of net mesh, size of fish to be taken, etc. Intensity of fishing may be controlled by licence. Fishing areas are patrolled. Persons guilty of infractions of the regulations are prosecuted. Experts are currently looking for a way to reduce the waste of immature fish in the dragger fishery. Even the alewife is receiving special consideration. This fish is traditionally salted for the West Indies trade. Now it is also in demand for lobster bait and pet food so that fishing has been intensified. Relation of catch to stocks is being studied, especially since, like salmon, the fish are taken during spawning runs.

Culture and protection of available stocks are supplemented by constant exploration for new stocks. Large scallop beds recently found offshore now support a valuable fishery in the Maritime Provinces. Assurance of steady supplies was all that was needed to stabilize a strong market.

Canada also shares in international agreements to conserve certain fish stocks in extra-territorial waters,* co-operating with the United States to protect fish populations in the Great Lakes and regulate catches of Pacific halibut and pink and sockeye salmon to the mutual advantage of both countries; joining with the United States and Japan to preserve and perpetuate stocks in the North Pacific; and entering into a formal agreement among all nations fishing the banks of the North Atlantic to prevent over-fishing in that area.

Agricultural potential of the land masses of the globe has been measured. Food potential of the sea is only known to be enormous—complete assessment cannot be made.* The North Atlantic banks provide some of the world's best sea fishing. Canada is nearer to them than any other nation and so, as competition intensifies, will always have an advantage in real cost of operations. Canada also has a greater freshwater area than any other nation and these inland waters are more amenable to fish culture than the sea. They are increasingly exploited commercially as road-building programs open up the more remote lakes. They help Canada to hold her supply position on the world market and it seems certain that they will gradually become more important during the next decade.

Section 2.—Governments and the Fisheries

The British North America Act gave the Federal Government full legislative jurisdiction for the coastal and the inland fisheries of Canada and under this Act laws are made for the protection, conservation and development of the fisheries throughout the country. However, the provinces have, by agreement, assumed administrative responsibilities in varying degree. Consequently, though all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done without duplication of staff either by federal or by provincial officers, according to arrangement.

Specifically, all tidal or sea fisheries except those of the Province of Quebec are administered by the federal Department of Fisheries, and the freshwater or non-tidal fisheries with some exceptions are administered by the provincial departments. Quebec takes responsibility for all its fisheries including those in salt waters. Ontario, Manitoba, Saskatchewan and Alberta administer their freshwater species. In British Columbia, provincial government control extends to the freshwater forms and the Federal Government is responsible for marine and anadromous species. In Prince Edward Island, Nova Scotia, New Brunswick, Newfoundland and the Yukon and Northwest Territories, the Federal Government maintains complete control; administration of the fisheries of the National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Northern Affairs and National Resources.

* See also pp. 632-633.

FEDERAL GOVERNMENT EXPENDITURES ON FISHERIES SERVICES, YEARS ENDED MAR. 31, 1952-61

Subsection 1.—The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:—

- (1) The Department of Fisheries proper with headquarters at Ottawa, Ont., and area offices under Area Directors at Vancouver, B.C., Winnipeg, Man., Halifax, N.S., and St. John's, Nfld.
- (2) The Fisheries Research Board of Canada with headquarters at Ottawa and eight stations across Canada.
- (3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of these agencies is given in this Subsection.

The Department of Fisheries.—The chief responsibilities of the Department of Fisheries throughout Canada are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the staff of the Department is stationed in the field and is composed mainly of protection and inspection officers. The protection officers, including those on the Department's 82 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish, and are also responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant section of the Meat and Canned Foods Act.

A conservation program is carried out by the Conservation and Development Service of the Department. Protection officers enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, and also inspect spawning streams and keep them clear of obstructions. Biologists investigate such problems as pollution and water supply, and engineers construct fishways to enable fish to bypass obstructions of all kinds. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

For the past few years a bounty has been paid for the killing of the parasite-carrying harbour seals along the Atlantic and Pacific Coasts at a rate of \$10 for adults and \$5 for young seals. Total payments for the year ended Mar. 31, 1960 amounted to \$31,200.

Inspection of fish and fish products to ensure a high standard of quality is carried out by the Inspection and Consumer Service, and fish inspection laboratories are maintained on the Atlantic and the Pacific Coasts and in Toronto and Winnipeg. A staff of home economists operates test kitchens in Ottawa, Toronto, Vancouver, Montreal, Halifax, Edmonton and Winnipeg, and conducts demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the medium of printed material, films, radio, television and exhibitions, the Information and Educational Service of the Department informs the public on the various aspects of the industry and the work of the fisheries service, with the object of developing a better understanding of the resource and those engaged in its exploitation. This Service works closely with the Conservation and Development Service in matters concerning the conservation of fisheries and with the Inspection and Consumer Service toward encouraging increased consumption of Canadian fish products in the United States and other markets.

The Economics Service engages in two related fields of responsibility: (1) to provide the government and the commercial fishing industry with current information, including statistical data, under the general heading of trade intelligence, and (2) to carry out studies and investigations in the primary fisheries and in the processing and distribution of fish products. In the first field, the Service works in close co-operation with the Dominion Bureau of Statistics and the Foreign Trade Division of the Department of Trade and Commerce; in the second, there is similar collaboration with the Fisheries Research Board. In both, a necessary contribution is made to the formulation of policy for fisheries management, industrial development and market services.

In addition to these regular services the Department assists the commercial fishing industry in several special ways. To promote efficient primary fishing operations and improve the marketing of fishery products, assistance is provided for the construction of dragners and longliners and for bait-freezing and storage facilities on the Atlantic Coast. The Fishermen's Indemnity Plan affords low-cost protection from losses of boats and lobster traps through storms and other causes. The Plan, in operation since 1953, meets a long-standing need on the part of small-scale individual fishermen. Vessels valued at from \$250 to \$10,000 may be insured with payment of a premium of 1 p.c. of the appraised value per annum. Up to Mar. 31, 1960, a total of 5,423 fishing vessels with an appraised value of \$16,347,840 had been insured under the Plan. In response to considerable demand for a similar type of protection against unusual losses of fishing gear and equipment other than vessels, a first step was taken by the introduction of regulations giving a measure of compensation to lobster fishermen suffering abnormal losses of lobster traps, provided that a small premium has been paid by the fisherman. The premium rate varies in accordance with conditions in the different fishing areas but has been kept low. The Department also provides financial assistance to educational institutions agreeing to carry out specialized educational work among fishermen.

International Fisheries Conservation.—Conservation of the resources of the high seas can be effected only with regulations, and for this purpose international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world in joint fisheries conservation development. Major examples of this joint effort are the International Pacific Halibut Convention, concerned with the preservation of the halibut stocks of the north Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Convention, concerned with the conservation and development of the sockeye and pink salmon of the Fraser River. Investigations carried out under the auspices of Commissions appointed under these conventions, subsequent regulation and limitation of catches, and the construction of salmon fishways appear to have been successful in arresting and reversing an earlier trend towards depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under a treaty signed in 1911, known as the (North Pacific) Sealing Convention, pelagic sealing was prohibited while the animals were migrating to and from the Pribilofs where most of them breed. This treaty had been signed by the United States, Canada, Russia and Japan, and was one of the earliest conventions on resources of the sea. In 1941 Japan abrogated the treaty and the following year Canada and the United States signed a Provisional Fur Seal Agreement under which Canada, in return for abstaining from pelagic sealing, received 20 p.c. of the annual catch, which was supervised by the United States. A conference to re-negotiate the original convention was begun in Washington in November 1955 and a new settlement was signed by the original four countries on Feb. 9, 1957.

In 1949 the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The Commission established under this Convention, with headquarters at Halifax, N.S., makes scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. Treaty signatories are: Canada, Denmark, Iceland, the United States, the United Kingdom, France, Italy, Norway, Portugal and the Federal Republic of Germany.

A step towards international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951 when Canada, the United States and Japan conferred at Tokyo. The resulting Convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention is studying the northern Pacific fisheries and will determine the application of the treaty principles and promote and co-ordinate the necessary scientific studies.

The seventh, and latest, international fisheries agreement to which Canada is a signatory is the Great Lakes Fisheries Convention, which provides for joint action by Canada and the United States in Great Lakes fishery research and in a program for the control of the predator lamprey in these waters. This Convention came into force in October 1955. (See also p. 629.)

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted in some years off the coasts of Newfoundland and British Columbia.

The Fisheries Prices Support Board.—Under the Fisheries Prices Support Act passed in 1944, this Board was set up in July 1947 to recommend to the Government price-support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish-producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of \$25,000,000 but only on recommendation of the federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative activities. The work is closely integrated with that of the Department's Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities and on factors affecting the income of fishermen in the various producing areas. The financial position of fishermen is kept under continuous review and recommendations are made to the Government on the basis of the findings. Special investigations are made when serious problems arise in particular areas.

The Fisheries Research Board.*—The Fisheries Research Board of Canada was established in 1937 to succeed the Biological Board of Canada which in 1912 had succeeded the Board of Management of the Canadian Marine Biological Station established in 1898. The Board functions under the control of the Minister of Fisheries as an independent fisheries research body carrying out "investigations of practical and economic problems connected with marine and fresh water fisheries" (Fisheries Research Board Act) and, as such, provides the Department of Fisheries with services for research into problems encountered by the Department in its administration of the fisheries of Canada. The Board carries out biological research through five centres across Canada, oceanography at two and technological studies at five others. The Board consists of a full-time chairman appointed by the Governor in Council and 18 unpaid members appointed by the Minister of Fisheries; as stated in the Fisheries Research Board Act, "a majority of the members of the Board, not including the Chairman, shall be scientists, and the remaining members of the Board shall be representative of the Department and the fishing industry".

The biological work of the Board is designed primarily to provide a general scientific basis for the conservation and wise management of Canada's vast marine and freshwater fishery resources. Investigations include the life histories of the various species of commercial importance, their population dynamic, their diseases and enemies. Also investigated are positive cultural methods in areas where some control of the environment is possible; new fishing grounds are sought and experiments in improvement in fishing methods undertaken. The biological work on the Atlantic Coast is conducted out of stations at St. Andrews, N.B., and St. John's, Nfld.; Arctic work is directed from Montreal, Que.; work on freshwater fish is directed from a station at London, Ont.; and Pacific Coast work is directed from a station at Nanaimo, B.C.

Oceanography includes the study of the biological, chemical and physical aspects of the marine and freshwater environments of fish and other aquatic organisms of importance. These studies are necessary to understand the occurrence and distribution of the fish and are carried out by the Board's two oceanographic groups, one on each coast.

The technological studies are aimed at making the best use of Canada's fishery catches. Investigations are conducted towards improving methods of preserving and processing and in the utilization of fish wastes. In recent years considerable work has been done on mechanization to further develop higher efficiency in the industry. The technological work on the Atlantic Coast is carried out at stations in Halifax, N.S., and Grande Rivière, Que., and applied work for Newfoundland is under the supervision of a unit at St. John's, Nfld., and for inland areas under a unit at London, Ont. A station at Vancouver, B.C., undertakes Pacific Coast studies.

* Prepared by Dr. J. L. Kask, Chairman of the Fisheries Research Board of Canada, Ottawa.

Subsection 2.—The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.—The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with improvement and development of fishing and production methods. It conducts experiments and demonstrations in longlining, Danish seining and otter trawling, in the construction of multi-purpose fishing craft, and in the exploration of potential fishing grounds.

Loans are made to processors for the establishment and expansion of fish processing plants and for deepsea druggers and also to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production. Fishermen receive further aid through bounty payments at the rate of \$160 per ton for newly constructed vessels under the Fishing Ships (Bounties) Act of 1955. The Fishing and Coastal Vessels Rebuilding and Repairs (Bounties) Act was passed in 1958 to enable the government to assist financially in maintaining and prolonging the life of the existing fleet, and in 1959 the Coasting Vessels (Bounties) Act was passed, designed to encourage the construction of new coastal vessels for service in Newfoundland waters by granting a maximum bounty payment of \$300 per ton for locally built ships not exceeding 400 gross tons.

Other services include the operation of fisheries training schools in navigation and engineering, advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics, assistance to fishermen's unions, weather and ice reports, and search and rescue. The Fisheries Salt Act passed in 1957 implements more rigid control over the use of fisheries salt.

The inland waters of Newfoundland, though they provide excellent sport fishing, are not commercially exploited. The lakes and ponds remain under the authority of the Natural Resources Branch of the provincial Department of Mines and Resources, but the rivers and streams—the resort of migratory fish such as salmon and sea trout—are under federal control. Matters of conservation and guardianship are therefore mainly or wholly the concern of the federal Department of Fisheries although, to the extent to which they affect the ponds and lakes, they are subject to provincial or joint action.

Prince Edward Island.—The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity, and is mainly concerned with development of the fisheries industry. The Department provides technical assistance and, in conjunction with the Fisheries Research Board of Canada and branches of the federal Department of Fisheries, engages in some experimental work.

Financial assistance is made available to fishermen through the Fishermen's Loan Board of Prince Edward Island, a body corporate operating under the provincial Department. The Fishermen's Loan Board operates under authority given by the Re-establishment Assistance Act and regulations thereunder, approved by the Lieutenant-Governor in Council, Jan. 7, 1949, with amendments. Loans are made to fishermen and companies for the purchase of boats, engines and other deck machinery at an interest rate of 5½ p.c. Since its reorganization in 1949, the Board has lent approximately \$1,500,000 for the modernization of the inshore and offshore fleets. Loans for the construction or expansion of processing plants are available through the Industrial Establishments Promotion Act under which loans may be made for facilities handling agricultural, horticultural or fisheries products.

* Prepared by the respective provincial departments responsible for fisheries administration.

Game fisheries are the responsibility of the Department of Industry and Natural Resources. The streams of the province, mostly spring-fed and fairly constant in flow, provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations concerning the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada at sites provided by the provincial Department. Unfortunately many of the formerly fertile and highly productive ponds of the province have disappeared, and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

Nova Scotia.—Although both the marine and inland fisheries of Nova Scotia are completely under the control of the Federal Government, the Nova Scotia Government recognizes that several fields exist in which provincial initiative is necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

Provincial interests in the commercial fisheries are the concern of the Fisheries Division of the Department of Trade and Industry. The Fishermen's Loan Board and the Industrial Loan Board are administered within this Department; the first makes loans to fishermen for the purchase of new and improved boats and engines, and the second makes loans for the construction or improvement of fish processing plants. Technical advice is provided to applicants for loans and inspection and survey services are available to the Loan Boards. The engineering staff gives similar services to others in the fish industry who may not require financial assistance, and to dependent or collateral businesses such as the boat-building industry. A staff of instructors conduct training courses in the care and maintenance of marine engines, in basic navigation, and in the design, construction and maintenance of nets and other fishing gear. This program receives substantial assistance from the Vocational Training Branch of the federal Department of Labour. The actual on-course instruction is supplemented frequently by assistance to individuals or small groups coping with particular problems and by actual demonstration or loans of untried types or designs of fishing gear.

The Fisheries Division administers, in co-operation with the federal Departments of Fisheries and National Health and Welfare, the Nova Scotia Fisheries Act, which requires fish processors and wholesale buyers of fish from fishermen to obtain licences. The purpose of the Act is to improve the standards of sanitation, plant construction and operation in the local fish industry and trade. The Division also performs a variety of liaison services between individuals or local groups and the several departments of the provincial and federal governments to which any problem or proposal may have to be referred.

The provincial activities in connection with the inland fisheries are related almost wholly to salmon and trout. The Department of Lands and Forests is managing a project for the rearing in captivity of young salmon to the smolt stage, i.e., to the age when they are about ready to leave the rivers to grow to full maturity in salt water and are likely to have a higher survival rate than the younger fish usually distributed by hatcheries. Other work in these fields is carried on by the Nova Scotia Research Foundation, which has collaborated with the Fisheries Research Board of Canada in a program of research into the Atlantic salmon populations by providing some scientific personnel and by conducting certain investigations on the La Have and Margaree Rivers. Experiments in the fertilization of lakes have been undertaken to increase trout productivity and in partial poisoning to reduce the numbers of coarse fish competing with trout for the available food supply. Fundamental investigations into the fish-supporting capacities of lakes are currently active and include studies of the source and regeneration of such nutrients as phosphorous and nitrogen.

New Brunswick.—The commercial fisheries of New Brunswick, both tidal and inland, are under the jurisdiction of the federal Department of Fisheries; angling is also under the same jurisdiction but angling licences are being issued by the provincial Department of Lands and Mines. To supplement the activities of the federal Department of Fisheries,

the Provincial Government created, in 1946, a Fisheries Branch and a Fishermen's Loan Board within its Department of Industry and Development. Since its inception, the Fishermen's Loan Board has lent nearly \$5,000,000 to fishermen for the purchase of new fishing boats and modern equipment. Small loans are made available to inshore fishermen for the purchase of new lobster boats and engines, and larger amounts to offshore fishermen for the building and equipping of modern groundfish draggers and longliners. New Brunswick has an 85-dragger fleet which is one of the most efficient on the Atlantic Coast.

New designs of fishing vessels are being prepared every year by the Fisheries Branch and a certain pattern of standardization is followed to maintain building and maintenance costs at the lowest possible level. Recently, a fleet of twenty 48-foot longliners was built by the Board for fishermen of the Gulf of St. Lawrence area. Three newly designed combination longliner-gillnetters are being built on an experimental basis.

Practical training is made available by the Fisheries Branch to dragger operators and inshore fishermen during the winter season in various parts of the province. Instructions are given on navigation, care and maintenance of marine engines and electronic equipment, economics, marine insurance and proper handling of fish aboard fishing vessels. A permanent school of Fisheries was opened at Caraquet in the fall of 1959 where a two-year course (four months a year) is conducted for a small group of young fishermen. This school is operated by the local school board with the joint participation of the provincial Departments of Education and Industry and federal Departments of Labour and Fisheries.

In close co-operation with the Industrial Development Service of the federal Department of Fisheries, experimental projects, such as codfish gill-netting, Danish seining, purse seining for mackerel, mid-water trawling for sardines, mechanical clam digging, etc., are being undertaken by the provincial Fisheries Branch in an effort to introduce modern fishing methods and equipment.

To co-ordinate the efforts of the five Atlantic provinces and the Federal Government in the promotion of the East Coast fisheries, the federal Department of Fisheries, formed a Provincial-Federal Atlantic Fisheries Committee of which the Province of New Brunswick is a member.

Quebec.—The provincial Department of Game and Fisheries administers both the sea and the inland fisheries of Quebec. The Department has two divisions—the Division of Maritime Fisheries and the Division of Fish and Game, the latter being charged with the administration of the inland fisheries.

Sea Fisheries.—The Quebec Government gives much consideration to the administration of the sea fisheries of the province. For the benefit of producers and fishermen it operates a network of cold storage plants for the freezing and preservation of fish. The network comprises 59 plants together having a daily freezing capacity of 485 tons and a storage capacity of 22,000,000 lb. of fish. These plants also perform a valuable service to fishermen by providing them with frozen bait and ice. In addition, the Department owns and maintains 123 stations in small fishing ports where fish is kept under proper conditions while awaiting collecting trucks or boats, and also operates two artificial drying plants with a processing capacity of 6,000,000 lb. of fish annually.

The Department maintains a staff of fish wardens, technicians and technologists to administer fishery legislation and to assist in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City with an office at Gaspé for the administration of cold storage plants. Fish inspection is carried out by federal inspectors who are vested with additional powers for local sale by the Provincial Government.

Educational work among the fishermen and producers is conducted by the Department to teach the latest methods of fish preparation and of obtaining high-quality products. The new Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, and the Superior

School of Fisheries at Ste. Anne de la Pocatière conducts a four-year course for technologists. Encouragement is given to the co-operative associations of fishermen through the Social Economic Service of the latter institution. Under a maritime credit system, fishermen may obtain loans from credit unions for the purchase of boats and gear. The Department adheres to the federal-provincial agreement on the building of draggers and longliners and assumes the building costs on a capital refunding plan.

The fish trade is promoted through advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and the free distribution of fish recipes and publicity leaflets as well as through exhibits at fairs.

Hydrographical research in the Gulf of St. Lawrence, studies on the location of new fishing grounds, and experiments on seafish biology are conducted by a Marine Biological Station at Grande Rivière and two substations on the North Shore and the Magdalen Islands. This research has brought into use new types of fishing vessels recommended to fishermen. The Department also operates a Limnological Laboratory at Quebec City for studying the biology of the freshwater fish of the St. Lawrence River and its tributaries. The Quebec Aquarium at Quebec City exhibits freshwater and saltwater fish in 30 large tanks.

Inland Fisheries.—The Division of Fish and Game exercises jurisdiction over the inland waters. Three hundred full-time wardens are employed and licences are required for sport fishing and hunting, the revenue from which is applied to the improvement of fishing and hunting conditions. Five hatcheries are maintained at strategic points throughout the province: St. Faustin, Lachine, Lac Lyster, Tadoussac and Gaspé. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, maskinonge fingerlings and older fish.

The Department administers five parks and 13 reserves in all of which, except for Mount Orford Park, excellent fishing may be found. Gaspesian and Laurentide Parks are renowned for their trout fishing. Chibougamau Reserve and La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Five salmon streams, all under the jurisdiction of the Fish and Game Division, are open to anglers: the Romaine River, the St. Jean River, the Petite Cascapédia River, the Matane River and the Port Daniel River. The Department co-operates with sportsmen through a joint committee composed of departmental officials and the directors of the larger fish and game associations. The committee studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

The Biological Bureau of the province, located at the University of Montreal, operates two stations for practical work in the study of problems connected with marine life. One is located in Mont Tremblant Park and the other in Laurentide Park.

Ontario.—The fishery resources of Ontario are administered by the Fish and Wildlife Branch, Department of Lands and Forests. The Branch operates under the authority of the federal Fisheries Act, the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fisheries Act and the Regulations connected therewith.

Commercial Fishing.—The commercial fishing industry in Ontario provides employment for about 3,200 persons directly and for many more indirectly, and produces an annual yield of from 35,000,000 lb. to 45,000,000 lb. of fish. An all-time high catch of about 60,000,000 lb. was recorded in 1956. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie which is noted for its blue and yellow pickerel, white bass, whitefish and perch. Other principal species of fish taken commercially are lake trout, herring or cisco, sturgeon, pike, catfish, bullheads, carp, suckers and smelt. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60-foot tugs, and types of gear vary from the most common gillnets, pound-nets and trap-nets, seines and baited hooks to small hand-operated seines and dip-nets. Fishing methods and equipment have been modernized rapidly during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs. Such aids as depth-sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear.

Most Ontario fishermen are organized into various local associations. These associations are, in turn, represented by the Ontario Council of Commercial Fisheries and by the Lake Erie Fisheries Council, which perform important services to the industry. The Ontario Fishermen's Co-operative and its member groups are of interest also in the organization of the fishery in the province.

Angling.—The sports fishery in Ontario is rapidly becoming one of the major industries of the province. With an estimated freshwater area of some 68,490 sq. miles, the province is one of the most attractive fishing areas on the Continent. Excellent angling opportunities are available for such prized fish as lake, speckled, rainbow and brown trout, yellow pickerel, black bass, pike and maskinonge. It is difficult to measure the total value of the sports fishing industry to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for provincial parks only) is in the neighbourhood of \$2,500,000. The management of this valuable resource is administered by a well-trained field staff of conservation officers and biologists located in the 22 forestry districts of the province.

Provincial Hatcheries.—Ontario operates 20 hatcheries and rearing stations and excellent results have been produced in the culture and distribution of various species of game and commercial fish. The primary species reared in these operations include trout (lake, speckled, brown and rainbow), maskinonge, bass, whitefish and yellow pickerel. Four of the finest trout-rearing stations on the Continent are located in this province—at Dorion near Port Arthur, Sault Ste. Marie, Hills Lake near Englehart, and Chatsworth.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes and in inland waters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sports fisheries on the respective lakes. In Algonquin Park detailed studies concerning lake trout and smallmouth bass are in progress and management techniques are being tested against a background of creel census which has been continuous since 1936. Studies of speckled trout have recently been re-instituted after a five-year break in continuity.

A selective breeding experiment concerning the hybrid between lake trout and speckled trout is progressing favourably. The deep-swimming character of the lake trout and the character of maturity at early age of the speckled trout are those being selected for combination in the hybrid.

Co-operation by Ontario in the field of gear development is being extended through the Federal-Provincial Committee for Ontario Fisheries and in the field of sea lamprey control through the Great Lakes Fishery Commission.

Manitoba.—The freshwater fishery in Manitoba is assuming an increasingly important position in the economy of the province. Although, at the dictates of nature, the industry experiences periods of boom and recession, it is nevertheless constantly expanding. Production in 1959 of 31,931,600 lb. valued at \$6,253,524 provided full-time or part-time employment for 5,682 fishermen. In addition, at least 6,000 persons were engaged in subsidiary industries such as fish-processing, transportation, boat-building and other related industries.

The lakes and streams of the province produce 15 varieties of commercial fish, the most important species being whitefish, pickerel, sauger and northern pike. Some 2,500 commercial fishing boats are in operation, varying in size from lake freighters to small skiffs powered by outboard motors. The value of these boats together with nets and other equipment is estimated at \$2,878,000 and investment in processing plants and cold storage facilities at approximately \$3,000,000, which makes a total capital investment of at least \$5,000,000 in plant and equipment. On the whole, the fisheries are a tremendous economic asset to the province.

The Department of Mines and Natural Resources of Manitoba, in supervising operations and enforcing fishery regulations, operates a fleet of modern diesel patrol boats during the open-water seasons and uses bombardiers, snowmobiles and light trucks in winter. All patrol units are equipped with two-way radio communication instruments. Two spawn-gathering camps and four fish hatcheries are in operation in the province; two of the latter are pickerel hatcheries, one is engaged in the culture of whitefish eggs, and one operates on a year-round basis producing several varieties of trout. The fish culture program employs the latest scientific processes in the rearing and culture of the species mentioned and large plantings of sport and commercial varieties have been made. Data gathered through the years indicates that such culture operations are essential to the maintenance of well-stocked lakes and streams. Five species of sport fish are cultured at the Whiteshell Trout Hatchery—speckled, brown, rainbow and lake trout—and a new hybrid variety called “splake” is in production. This splendid species of sport fish, developed by crossing speckled and lake trout, has created great interest among anglers.*

A long-range scientific and biological program recently begun is designed to provide valuable factual information on such topics as lake limits and most favourable fishing seasons. Constant progress is also being made in the handling and processing of fish. Both the government and the industry are aware of the current market demands for high quality packaged products processed in modern plants under sanitary conditions and two new plants equipped to meet this demand have been constructed at Lynn Lake and Island Lake. The Department of Mines and Natural Resources, in co-operation with the Department of Health and Public Welfare, has inaugurated a plan to control health and sanitation as it relates to fishing stations and packing plants.

Saskatchewan.—Saskatchewan's fishery resource is based on approximately 32,000 sq. miles of water area and contributes much to the economic and recreational development of the province. The Fisheries Branch of the Department of Natural Resources, with head office at Prince Albert, is responsible for the administration of the fisheries, for the planning of policies and for the development of programs to ensure the proper management and utilization of the resource. The Branch has three main divisions—Fish Management (Commercial and Sport Fisheries Sections), Fish Research, and Fish Culture.

The commercial fishing harvest during the year ended Mar. 31, 1959 was the highest on record. Approximately 13,000,000 lb. of fish were taken from 148 lakes, the principal species being whitefish, lake trout, pickerel, northern pike and sturgeon. About 75 p.c. of this catch was taken in summer and the remainder during the winter season. The 11 processing plants operating in the province produced 2,250,000 lb. of filets; five of these plants have qualified for federal inspection in accordance with the federal Department of Fisheries voluntary inspection program for plants producing fresh and frozen fish products. The program for improving the quality of fish and raising the sanitation standards, actively carried out during the past few years, will enable Saskatchewan's fishing industry to benefit immediately from the federal inspection program.

During the year, 1,072 domestic fishing licences and 1,674 free Indian permits were issued. In addition, 84 fur farm fishing licences were issued to provide food for 45,300 mink; mink ranchers used approximately 5,250,000 lb. of coarse fish (cisco, burbot and mullet).

Sport fishing is one of the main recreational attractions in the province during the summer and angling through the ice in winter is becoming increasingly popular. The "roads to resources" and "forest access roads" programs have made several new water areas more accessible to the angler. In 1959, 104,889 angling licences were sold compared with 31,640 in 1949; in the same period the number of licences purchased by Saskatchewan residents increased from about 26,000 to 100,000.

The continued expansion of commercial and recreational fishing emphasizes the importance of the research program initiated in 1948, a program that has provided the basis for the development of fisheries management programs and policies. The main objective has been to encourage multi-utilization of the fishery, keeping in mind the interests of the various groups particularly concerned with the resource—commercial fishermen, mink ranchers and anglers. The main phases of the program are: (1) the undertaking of surveys to determine productivity of lakes; (2) the securing of information on the relationship of the fish species so that multi-purpose harvests may be developed on scientific bases; and (3) the undertaking of projects to assess factors, such as pollution, which may affect fish environment.

During the 1958-59 fiscal year, biological and fisheries investigation was made of 12 lakes, the life history of lake trout population at Lac la Ronge was studied, two small lakes were rehabilitated and pollution studies were made of the Qu'Appelle and Saskatchewan Rivers. The staff consists of five permanent biologists and one consultant, and usually 12 university students are employed during the summer on the surveys.

Operations at the new fish culture station commenced with the hatching of 43,000,000 pickerel fry in the spring, which were released in 61 lakes. At the Arctic grayling spawn camp on Black Lake at the east end of Lake Athabasca about 1,250,000 grayling fry were hatched. Some 182,500 eastern brook trout fingerlings were stocked in 26 streams, 130,000 rainbow trout were released in 13 water areas and 500,000 rainbow trout eggs were hatched for stocking in Thomson Lake, a 2,000-acre reservoir in the southern part of the province. In addition, some 16,000,000 whitefish eggs were incubated at the station for distribution to a number of saline lakes.

Alberta.—The Commercial Fisheries Branch and the Fish and Wildlife Branch of the Department of Lands and Forests administer commercial and game fishing respectively under authority of the Fisheries Act (Canada) and the Fishery Act (Alberta).

Regulations under the Fishery Act (Alberta), designed to improve the packing, handling, processing, storage and quality of commercial fish, have been well received and supported by the Alberta industry. In line with a policy for producing good-quality fish, lakes in which whitefish are infected with pike-tapeworm and do not meet the quality standard are commercially fished for animal food production only.

About 55 p.c. of the whitefish taken is exported to the United States. Exports have dropped considerably in recent years mainly because domestic markets have increased. Mink farmers of the province utilize almost the entire catch of tullibee.

The management of trout streams of the North and South Saskatchewan River systems is being continued on an alternate year, open and closed, basis. Surveys have shown that adequate harvests of trout are being realized by this type of management, while protection of breeding stocks, sufficient for natural reproduction, is afforded. Hatchery trout are being utilized almost exclusively for stocking lakes and beaver dams where natural reproduction is limited or non-existent. There is no closed season on trout with the exception of streams which require special regulations for management purposes. Minimum size limits have been removed on all game fish species in the province. Eradication of undesirable fish species by chemical treatment of lakes and subsequent restocking with trout is being carried out on a limited scale.

British Columbia.—A Fisheries Office, which was organized in 1901-02 and became very active in fish culture work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and

Conservation. Commercial fisheries are represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking the administrative and regulative jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing and clam fishing in the tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The Provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Net fishing in the non-tidal waters of the province, including commercial fishing, is regulated and administered by the Commercial Fisheries Branch, Department of Recreation and Conservation, and authority for regulation of the game fisheries in non-tidal waters is vested in the Fish and Game Branch which operates a number of trout hatcheries and egg-taking stations for restocking purposes.

The shellfish laboratory at Ladysmith on Vancouver Island, formerly operated by the Department, was closed Dec. 31, 1958. The biological research into those species over which the province has control, principally oysters, clams and other forms of shellfish as well as marine plants, is now conducted by the Fisheries Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under agreement with the federal and provincial authorities as of Jan. 1, 1959. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis.

The Branch co-operates closely with the Fisheries Research Board of Canada.

Section 3.—Fishery Statistics

Subsection 1.—Primary Production

Although during 1958 poor weather and a scarcity of groundfish on the Atlantic Coast hampered the fishermen, the largest catch of sockeye salmon in fifty years and very heavy quantities of fall herring taken off the Pacific Coast plus rising prices paid to fishermen in all areas brought the gross income of fishermen to a record level of \$116,530,000 compared with a previous high of \$105,835,000 reached in 1956. Total landings of 2,016,326,000 lb. were 9.7 p.c. lower than those reported for 1956 but 1.4 p.c. higher than landings in 1957. The average annual landings for the five years 1953-57 was 2,012,976,000 lb. and the average landed value for the same period was \$95,769,800.

In British Columbia the 1958 catch of all species amounted to 650,589,000 lb. with a record landed value of \$51,352,000, which exceeded the 1957 catch of 490,187,000 lb. by 32.7 p.c. and the landed value of \$30,021,000 by 71.0 p.c. The greater increase in value than in landings was attributable to higher unit prices of halibut and troll-caught coho and spring salmon. These increases in prices, together with the exceptionally large catch of sockeye salmon which amounted to 74,011,000 lb. compared with only 15,719,000 lb. in 1957, and the heavy herring landings which reached 405,123,000 lb. compared with 295,376,000 lb. in 1957, made 1958 a banner year in the British Columbia fishery.

Although the scarcity of cod and poor fishing weather affected the 1958 Atlantic Coast fishery, lowering the quantity landed to 1,228,799,000 lb. or 8.7 p.c. below the previous year's figure, the value of the catch at \$51,153,000 was 0.8 p.c. higher than the 1957 value. Newfoundland, where cod is by far the largest and most valuable catch, was the hardest hit, the landings in that province dropping 17.3 p.c. from \$13,672,000 in 1957 to

\$11,312,000 in 1958. However, as a result of increased unit prices, the value of fish landed in the other Atlantic Provinces surpassed the 1957 level. Cod is the most abundant species on the Atlantic Coast and the weight of this fish taken far exceeds that of any other species. At the same time, average unit prices paid to fishermen for cod are much lower than for haddock, swordfish, halibut, lobsters, etc., so that this species makes up a much lower proportion of the total value than of the total quantity. The 1958 catch of cod amounted to 530,932,000 lb. valued at \$13,228,000, representing a 17.3-p.c. decrease in volume and a 12.2-p.c. decrease in value as compared with 1957.

Lobsters vied in importance with cod as a source of fishermen's income in 1958. The total Atlantic Coast catch was 42,950,000 lb. valued at \$15,375,000, a decrease of 3.4 p.c. in landings and of 6.0 p.c. in value from 1957. The greatest number of lobsters are taken from Nova Scotia waters. Landings in that province in 1958 amounted to 17,932,000 lb.; in New Brunswick, 9,663,000 lb.; in Prince Edward Island, 7,969,000 lb., in Newfoundland, 4,697,000 lb.; and in Quebec, 2,689,000 lb.

Haddock ranks third in economic importance to the fishermen of the Atlantic Coast. The value of the 1958 catch was \$4,092,000, slightly below the 1957 value of \$4,210,000. The flounders and soles including plaice, witch, winter flounders, etc., are also important species in this area, landings in 1958 amounting to 86,892,000 lb. with a value of \$2,746,000. Salmon on the Atlantic Coast is of relative unimportance as compared with other species of the area and with British Columbia salmon.

In 1958 the inland waters yielded a catch of 114,613,000 lb. of fish, 4.2 p.c. less than the 119,589,000 lb. landed in 1957, but the value of 1958 landings was \$14,024,000, 4.1 p.c. higher than the \$13,471,000 in 1957.

Subsection 2.—The Fish Processing Industry

The Census of Industry survey of the fish processing industry covers establishments engaged in the processing of fish at the secondary industrial level. Some fishermen also process the fish they land to a certain degree but their operations are not included nor are the minor amounts of processing done in the inland areas (Ontario, the Prairie Provinces, and the Northwest Territories). In 1958, products of fish processing establishments had a selling value of \$180,784,000; the East Coast fish plants contributed \$91,474,000 and those of British Columbia \$89,310,000.

¹ Excluding establishments whose main activity was the handling of fresh fish or other products, such establishments being included for previous years. ² Not strictly comparable with years prior to 1956; this figure applies to sales or shipments, while the value of production is given for previous years.

The most important products of the fish processing industry are canned salmon for British Columbia and frozen fillets of groundfish for the Atlantic Coast. Because of the record landings of salmon in 1958, the pack of the canned product was the highest since 1951; it increased 33 p.c. to 1,900,178 cases from 1,424,558 cases in 1957. The value of canned salmon at \$58,749,000 represented about 65 p.c. of the value of the British Columbia fishery products reported through the Census of Industry and was 66 p.c. higher than in the preceding year.

The frozen groundfish fillet production on the Atlantic Coast (packaged fillets and blocks) was 134,398,000 lb. in 1958 as against 128,206,000 lb. in 1957. This production has increased almost constantly from year to year in the past decade, the major factor in its more recent growth being the production of fish blocks. Frozen groundfish fillets produced on the Atlantic Coast were valued at \$31,449,000 in 1958, which made up about 30 p.c. of the total value for the fish processing industry in the area. Other products of importance include dried salted fish, pickled fish, canned sardines and lobster products.

The value of all fishery products processed or handled in Canada by processors, handlers or fishermen during 1958 reached \$231,521,000 for the sea and inland fisheries, 23 p.c. higher than the 1957 level of \$188,018,000. Atlantic Coast seafood products rose to \$113,895,000 from \$105,119,000, the British Columbia value of fishery products to \$97,016,000 from \$63,650,000, and the inland fish value to \$20,610,000 from \$19,249,000.

PART II.—FURS

Section 1.—The Fur Industry*

The beaver, symbol of industry and engineering skill, has well earned his place on the Canadian Coat of Arms. A few years after the discovery of the North American Continent, beaver fur became a major product in the economy of the New World. Europeans recognized the value of beaver pelts for warmth and in the production of felt; North-American Indians recognized the value of metal implements in their economy. Under the dual stimuli, intensive hunting developed which soon depleted the resources of the coastal areas and traders moved up the St. Lawrence River to find new sources of supply. With increasing demand for furs from European markets, competition became very keen and frequently led to violence between rival nations. Continued competition in later years between the Northwest Company and the Hudson's Bay Company resulted in a further westward surge of exploration culminating in Sir Alexander Mackenzie's epic journeys to the Arctic and Pacific Oceans. Unfortunately, exploration gave way to exploitation. By the beginning of the twentieth century many fur species were faced with extinction and their declining numbers brought hardship to the trader and even greater hardship to the native peoples who had become dependent on the white man for the necessities of life.

However, about that time, major changes began to take place in the techniques of fur production. Fur farming, particularly of fox and mink, made its appearance. Mink ranching, coinciding with the present popularity of short-haired furs, has provided a large part of the revenue of the fur industry in recent years. Of greater importance has been the realization that fur-bearing animals are a renewable resource and that proper management can provide much greater returns. Legislation has therefore been passed by provincial governments and by the Federal Government sharply limiting the trapping pressure in the areas under their respective control. The establishment of National Parks and Game Sanctuaries has provided areas where animals may increase unmolested and repopulate formerly depleted areas. Intensive forest fire control and forest management have assured a continuous habitat suited to mammal needs.

One of the major management techniques developed has been the introduction of registered trapping areas. Under this plan, each trapper has some opportunity of managing his own area to provide the greatest possible return while sustaining the yield. With the guidance of conservation education, the trapper is taking his place as an interested partner in the maintenance and expansion of the fur industry.

Unfortunately, the possible benefit from the increase in potential fur production brought about by fur farming and intelligent harvesting methods has been largely nullified by declining prices. The decline in popularity of fur as an article of clothing has been particularly noticeable since the end of the War and low prices have brought considerable hardship to those people, particularly northern residents, who depend on the fur crop as a major source of income. In the light of this situation, the Federal Government has arranged a series of international exhibitions designed to stimulate the market for Canadian fur. Research to determine actual numbers and status of fur-bearers is being carried on by the provincial governments in the provinces and by the Canadian Wildlife Service in the Yukon and Northwest Territories, with the objective of improving management practices and maintaining closer control of fur harvests.

The relative value of the fur industry in Canada's economy has, of course, lowered continuously throughout the years, but the dollar value of the annual fur production has remained fairly constant.

* Prepared by the Canadian Wildlife Service, Department of Northern Affairs and National Resources, Ottawa.

Section 2.—Provincial and Territorial Fur Resources and Management

Most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, and the fur resources of the Yukon Territory and the Northwest Territories, all of which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources (see pp. 30-31) is responsible for all Federal Government interests in wildlife resources except for those activities closely related to Indian affairs. The service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems.

Detailed descriptions of provincial and territorial fur resources and management activities are given in the 1957-58 Year Book, pp. 616-622.

Section 3.—Statistics of Fur Production*

Total Fur Production.—Early records of raw fur production were confined to the decennial censuses when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw fur production. For a number of years the statistics were based on information supplied by the licensed fur trappers. More recently annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur dealers in that province.

¹ Approximate.

² Wildlife pelts for Newfoundland included from 1952.

Ontario led the provinces in value of fur production, accounting for 27 p.c. of the total in the 1958-59 season. Manitoba followed with 19 p.c., British Columbia with 14 p.c., Alberta 12 p.c., Saskatchewan 10 p.c., Quebec 9 p.c., the Atlantic Provinces 5 p.c. and the Yukon and Northwest Territories combined, with 3 p.c.

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

The total number of pelts taken during 1958-59 was about 1,000,000 lower than in the previous year so that, despite generally higher average values per pelt, there was a drop of approximately \$500,000 in the total value of pelt production. Increased average values were shown for standard mink, which advanced from \$15.01 to \$16.49, white fox which rose from \$15.26 to \$19.97 and muskrat which was \$0.85 in 1958-59 compared with \$0.71 in 1957-58. On the other hand, beaver decreased from \$10.45 to \$10.20, marten from \$6.29 to \$6.08, mutation mink from \$17.01 to \$16.09, and otter from \$23.63 to \$23.05.

Fur Farm Production.—Fur-bearing animals were first raised in Canada on farms in Prince Edward Island about 1887 and in Quebec in 1898; today fur farming is carried on in all the provinces. Foxes were the first fur-bearers to be raised in captivity on a commercial scale and for a time were of prime importance in the fur farming industry but recently very few foxes have been raised on farms. In 1958 mink accounted for 92 p.c. of the total fur-bearing animals on farms and chinchilla for 7 p.c. Small numbers of raccoon, marten, fisher, fitch, nutria and others are also reared.

There was a slow and steady increase in the number of fur farms until 1920 when 587 were reported, followed by a period of more rapid growth from 1920 to 1938 when the number reached 10,454 with a production value of \$6,500,000. In 1939, when the London and other European markets were lost to the fur industry, prices declined and many fur farms went out of production. Though prices rose considerably after the Second World War, operating costs increased and the number of fur farms, particularly those conducted in conjunction with other farming operations, continued to decrease. By 1958 only 2,572 farms reported but the value of production was \$16,094,000. The decrease in number of farms from 1957 amounted to 165, but the number of animals on such farms increased from 465,333 to 500,844 and the number of pelts taken increased from 4,891 to 9,160. Fox pelts taken continued their downward trend but there were 50,000 more mink pelts sold in 1958 than in 1957. Chinchilla also showed a considerable advance with an increase from 4,701 to 8,394.

Ontario is by far the major ranch-fur producer among the provinces and showed the greatest increase in value of production from 1957 to 1958. British Columbia and Manitoba followed in second and third places and these three provinces together produced 70 p.c. of the total value in the later year.

Section 4.—Marketing of Furs

Montreal, Que., is the leading Canadian fur mart although auction sales are also held at Vancouver, B.C., Edmonton, Alta., Regina, Sask., and Winnipeg, Man. The Saskatchewan Government maintains a Fur Marketing Service at Regina to assist producers in that province.

Grading.—The grading of furs to secure uniformity was introduced in 1939 by the federal Department of Agriculture so that furs may be purchased by grade without the necessity of buyers from other countries personally examining the pelts. Grading offers many advantages to the producer as well as to the trade in general. It educates the rancher as to the proper value of his pelts and creates an incentive to improve the quality of the product; it furnishes guidance in the planning of future matings, aids in raising the standard of quality of the entire crop of pelts and helps in advancing the level of prices for high-quality pelts.

Exports and Imports.—Before World War II, Canada marketed fur pelts mainly in the United Kingdom but that market was practically dormant during the war years and the fur trade was carried on chiefly with the United States. A revival of trade with the United Kingdom took place after the War but 80 p.c. of Canadian fur exports still go to the United States.

The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being the most valuable followed by beaver, muskrat and squirrel. Furs such as Persian lamb, mink, certain types of muskrat, raccoon, sheep and lamb and Kolinsky make up the major portion of the imports.

Exports and imports of all furs to and from the United States, the United Kingdom and all countries are given for the years 1957 and 1958 in Table 7.

Section 5.—The Fur Processing Industry*

The rather general term 'fur processing' includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

In 1958 the number of skins treated was 8,305,294 of which muskrat comprised 46 p.c., Persian and other types of lamb 14 p.c., mink 17 p.c., squirrel 7 p.c. and rabbit 4 p.c.

* Prepared in the Industry and Merchandising Division, Dominion Bureau of Statistics.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter deals with manufacturing in Canada in three Parts. Part I reviews the manufacturing situation showing particularly the changing pattern of growth resulting from the recession which began in the autumn of 1957 and lasted until about November of 1958. Part II provides general statistical analyses including manufacturing statistics from 1917; detailed treatment of 1957 production under various groupings and individual industries; and principal factors in manufacturing production such as capital expenditures and size of establishment. Part III deals with the provincial and local distribution of manufacturing production.

PART I.—REVIEW OF MANUFACTURING

Canada is no longer on the fringes of industrialization but ranks among the world's most important manufacturing countries. The rate of expansion throughout the years has been phenomenal but in the past generation alone Canada has changed from a country producing and exporting mainly primary products to one that is increasingly producing and exporting manufactured goods. Today, manufactures account for about 26 p.c. of the value of all goods and services produced and employ a like percentage of the total labour force.

Basic historical developments, such as the opening of the West and the magnitude of requirements of all kinds for World Wars I and II, have been followed by recent events of far-reaching significance—the discovery of the major oil pool on the prairies in 1947, the discovery of large-scale deposits of iron and the successful search for uranium have given new dimensions to Canadian thinking and business planning. These factors explain

the records of capital expenditures year by year in the postwar period. Yet it is not only rate of growth that is significant. There have been other periods when Canada's population has grown more rapidly and, in many respects, the rate of industrial expansion in the late 1920's was relatively as great as in the postwar years. But the real significance of the latter period is that never before has there been an advance on such a broad industrial front.

Noteworthy also is the changing emphasis of Canadian manufacturing activity. By 1949 the period of postwar conversion had passed and Canada had entered a new phase of economic expansion which derived its dynamic from the discovery of new resources and the application of new processes. Thus, even the sharp recession in the United States in the year 1949 failed to have significant effects in Canada. The influence of the Korean war and the consequent rearmament program gave an added impetus to the expansion of Canadian industry and to the development of Canadian basic resources. Capital expenditures that contributed most to the defence of Canada were given priority. Additional capacity was created to meet requirements of the specialized defence program—aircraft, electronic equipment, ships and guns—many items of which had never before been produced in Canada. Measures such as steel control, credit regulations and deferred depreciation had the desired effect—a shift gradually took place toward the further expansion of basic industrial capacity and away from investment in consumer goods and services.

The stability of current levels of manufacturing is indicated by the fact that such activity is the result of business assessments of resources and market potentialities. Millions of dollars are being invested in oil because the prairies can produce oil as economically as other great fields on the North American Continent. Petrochemical plants are being erected because the raw materials are readily at hand. The establishment of great smelting enterprises has been based on the coincidence of abundant and cheap hydro-power and access to ocean transportation, both of which are essential to low-cost production. The exploitation of the Ungava iron deposits rests on the belief that the steel industry of the North American Continent will need the high-grade ores involved in order to meet continually increasing demands. No country is in a more favourable position than Canada to supply uranium for the production of atomic energy.

Of strategic importance, and probably of even greater long-term significance to the Canadian economy, has been the growing world-wide shortage of raw materials—a shortage born of rising levels of employment and income and accentuated by the course of international events, especially since 1950. These demands have shown few signs of abating and have led to substantial increases in Canadian primary manufacturing capacity, particularly for light metals, nickel, chemical fertilizers and cheaper grades of paper.

In recent years the demands stemming from population growth and a rising standard of living have been noticeable at all levels. In food processing, a steady up-grading in the quality of foods sold on the domestic market has been even more important than the increased production required for a growing population. The two together have almost doubled the dollar sales of processed foods in this country since 1945. At the intermediate level, other important changes have taken place. Many of Canada's new chemical plants, for example, have been built with the domestic consumer in mind. Frequently using petroleum or natural gas as a source of raw material, they have gone a long way toward making Canada independent of imports in such categories as vanillin, nylon and rayon intermediates, and plastics for packaging and similar uses.

The tremendous development that has taken place in Canada during the decade preceding 1957 is strikingly illustrated by the increase of 70.3 p.c. in the physical volume of manufactured products between 1946 and 1956 as compared with an increase of only 31 p.c. in population. Part of this increase in production resulted from increased demands from abroad for Canadian manufactured goods, part to the demands imposed on Canadian industry as a result of the expansion in the economy during the same period, and part to an increase in the standard of living of the Canadian people. The advance of 91.9 p.c. in the output of durable goods, consisting mainly of building materials, transportation

equipment, and machinery and equipment of all kinds, reveals the extent of the contribution made by Canadian industry to the tremendous expansion in the productive capacity of the country. Non-durable goods during the same period increased by 53.8 p.c. With only one exception, all groups in both these sectors recorded market advances in volume output from 1946 to 1956, the exception being leather products with a decline of 6.8 p.c. In the durable goods sector, the most striking advance was made by the electrical apparatus and supplies group with an increase of 182.6 p.c. This was followed by non-metallic mineral products with 166.0 p.c., transportation equipment with 95.9 p.c., iron and steel products 79.8 p.c., non-ferrous metal products 62.6 p.c., and wood products 59.3 p.c. The greatest advance among the non-durable groups during the 1946-56 period was made by products of petroleum and coal with 190.8 p.c., followed by chemicals and allied products with 100.9 p.c., miscellaneous industries with 83.3 p.c., printing, publishing and allied industries 78.5 p.c., rubber goods 72.1 p.c., paper products 70.1 p.c., beverages 68.4 p.c., tobacco and tobacco products 61.0 p.c., textiles 32.2 p.c., foods 27.6 p.c. and clothing 23.4 p.c.

In 1957, despite a downturn in production which began in the autumn of the year, the manufacturing industries established new highs in number of employees, salaries and wages paid and selling value of factory shipments. Shipments were the highest on record and exceeded by 2.5 p.c. the high mark attained the previous year. The employment picture was not so impressive. Although there was an increase of 0.4 p.c. in persons employed in 1957 as compared with 1956, the number still was only 31,610 higher than the record employed in 1953. Salaries and wages paid and value added by manufacture exceeded the previous highs of 1956 by substantial margins. On the other hand, the physical output of manufactured products declined by 1.5 p.c. despite the small increase in number of employees; a drop of about 2 p.c. in the average number of hours worked per week in 1957 contributed to this result. The decrease in the volume of production, which contrasted with the increase in selling value of factory shipments, was more or less accounted for by an increase in the wholesale prices of partly and fully manufactured goods. The output of non-durable goods recorded a minor increase of 1.2 p.c. but the production of durable goods was down by 4.3 p.c., resulting in a net decline of 1.5 p.c. for manufacturing as a whole. The total index for manufacturing in 1957 stood at 142.9; for non-durable goods it was 139.7 and for durable goods 146.7.

The high level at which the manufacturing industries of Canada operated during 1957 was the result of two main factors. First was the continued high spending on capital goods, such as construction and machinery and equipment of all kinds, which rose 8 p.c. This high expenditure had the effect of stimulating certain durable goods industries to a marked degree. The volume of output of the hydraulic cement industry advanced 20.6 p.c., bridge-building and structural steel was 15.8 p.c. higher, and heavy electrical machinery as well as industrial machinery and machine tools recorded minor gains. The output of the primary iron and steel industry dropped 5.9 p.c.; production of pig iron at 3,718,350 tons was 150,147 tons higher but steel ingots and castings at 5,068,149 tons were 233,053 tons lower. The second factor was the impact on the consumer goods industries of the increase of about 543,000 in population and of the continued rise in labour income.

Lower export demand for Canadian manufactured products adversely affected manufacturing operations in 1957. The sharp decline in the exports of planks and boards, shingles, veneer and plywood which occurred in 1956 continued throughout 1957. Exports of wood pulp, newsprint, whisky, wheat flour, aluminum and products, copper and products, zinc, automobiles and parts, fertilizers, and aircraft were all lower but there were increases in exports of farm implements and machinery, nickel, artificial crude abrasives, non-farm machinery and synthetic plastics and their manufactures.

The minor recession that started late in 1957 continued for over a year to the beginning of November 1958. In comparing the two years it is found that the selling value of factory shipments in 1958 was only fractionally lower than the shipments in 1957, a year of record attainments. However, the decline in the physical output at 2.7 p.c. was more substantial and compared with a drop of 0.1 p.c. in value of shipments. The difference was accounted for by an increase in the wholesale prices of partly and fully manufactured goods. The

decline in production was accompanied by a drop of 5.0 p.c. in the number of persons employed. This, when compared with a drop of only 2.7 p.c. in the physical volume of production, follows the trend of recent years of the same volume of goods being produced by fewer employees. Because of the continuing increase in weekly and hourly earnings in manufacturing, a trend common to all other sectors of the economy, salaries and wages paid were down only 0.2 p.c. compared with 1957.

As already noted, the physical volume of production in 1958 declined 2.7 p.c., as compared with 1957 and 4.1 p.c. compared with the record level of 1956. Most of the effects of the downturn were felt by the producers of durable goods, whose volume of output dropped 5.5 p.c. Production of non-durable or consumer goods was all but maintained at the same high level as in the previous year. In the durable goods sector only two groups reported increases in volume—non-metallic mineral products increased by 7.6 p.c. and wood products by 3.0 p.c. The increased volume of these two groups reflected the continued high spending for construction, despite the general slackening in economic activity. The hydraulic cement industry, which is a component of the non-metallic mineral products group, increased 2 p.c. in volume, output rising from 6,049,098 tons in 1957 to 6,153,421 tons in 1958. The woods products group was also stimulated by the strengthened demand in other countries for its products; exports of planks and boards in 1958 amounted to 3,922,953,000 feet compared with 3,653,497,000 feet in 1957, red cedar shingles 1,814,711 compared with 1,718,203, and veneer and plywood 561,767,000 sq. feet compared with 490,750,000 sq. feet. Of the groups reporting lowered output, transportation equipment was the hardest hit; railway rolling-stock dropped 22 p.c., shipbuilding 17 p.c., motor vehicles 14 p.c., motor vehicle parts 10 p.c. and aircraft 5 p.c. The primary iron and steel industry suffered a loss of 9.5 p.c.; the production of pig iron at 3,059,579 tons was 658,771 tons lower and steel ingots and castings at 4,359,486 tons were 708,663 tons lower. The output of machinery was also severely curtailed; the machinery industry of the iron and steel group reported a drop of 22 p.c. in volume, while the heavy electrical machinery of the electrical apparatus and supplies group showed a more moderate decline of 11 p.c.

In the non-durable goods sector the trend in physical output in 1958 was mixed. Seven of the 12 groups in this sector reported declines, the greatest drop in volume of production being that of 7.2 p.c. in the rubber and rubber products group. Textiles came a close second with a loss of 6.9 p.c. and other declines ranged from 3.0 p.c. for products of petroleum and coal to 0.5 p.c. for paper and paper products. For the groups reporting higher volume of output, the increases ranged from 7.6 p.c. for tobacco and tobacco products to 1.0 p.c. for beverages. The gains made by these five groups almost equalled the losses of the other seven, so that the net result for the non-durable group as a whole was a loss of only 0.1 p.c. in volume.

Ontario continues to maintain its predominance among the provinces in manufacturing production, and in 1958 accounted for 49.0 p.c. of the total value of factory shipments. Quebec with 30.5 p.c. of the total retained second place followed by British Columbia with 8.1 p.c. Ontario's share in 1958 was slightly smaller than in 1957 while Quebec and British Columbia reported minor increases. The impact of the minor downturn in production in 1957-58 was not the same for all provinces. The outstanding feature was an increase of 2.3 p.c. in the number of employees reported by Saskatchewan when all other provinces reported declines. This no doubt resulted from the fact that Saskatchewan, being mainly a producer of consumer goods, was able to increase its manufacturing operations to meet the requirements of expanded population. British Columbia, with a drop of 5.1 p.c. in employees, experienced a second setback in manufacturing employment which had been expanding uninterrupted for a number of years prior to 1957. The greatest decline in employment, however, was reported by Newfoundland which had a drop of 8.3 p.c. Other declines ranged from 8.0 p.c. in Nova Scotia to 1.1 p.c. in New Brunswick. For Canada as a whole the decline in employment was 5.1 p.c.

The variations in volume of production experienced by the industrial groups for different periods during the past twenty years are given in the following table.

1.—Percentage Variation in Volume of Production, by Industrial Group, for Certain Periods 1946-58

Group	Volume Index (1949=100)		Percentage Variations			
	1957	1958	1957 compared with 1958	1946 compared with 1951	1951 compared with 1956	1946 compared with 1956
Non-durable Goods—						
Foods.....	133.2	139.0	+ 4.4	+ 3.9	+22.8	+27.6
Beverages.....	143.2	144.7	+ 1.0	+29.2	+30.3	+68.4
Tobacco and tobacco products.....	161.0	173.2	+ 7.6	+ 4.9	+53.6	+61.0
Rubber and rubber products.....	147.8	137.2	- 7.2	+39.6	+23.3	+72.1
Leather products.....	115.6	114.4	- 1.0	-27.1	+27.9	- 6.8
Textiles.....	117.6	109.5	- 6.9	+27.5	+ 3.7	+32.2
Clothing, including knitting mills.....	116.8	114.4	- 2.1	+ 6.2	+16.2	+23.4
Paper products.....	135.5	134.8	- 0.5	+45.1	+17.3	+70.1
Printing, publishing and allied industries.....	138.2	134.4	- 2.7	+38.7	+30.6	+78.5
Products of petroleum and coal.....	223.5	216.8	- 3.0	+72.9	+68.2	+190.8
Chemicals and allied products.....	183.4	186.5	+ 1.7	+37.9	+45.7	+100.9
Miscellaneous industries.....	153.3	160.0	+ 4.4	+48.4	+23.5	+83.3
Durable Goods—						
Wood products.....	127.3	131.1	+ 3.0	+32.3	+20.5	+59.3
Iron and steel products.....	139.6	126.4	- 9.5	+44.8	+24.2	+79.8

Durable Goods.....	146.7	138.6	- 5.5	+50.1	+27.9	+91.9

PART II.—STATISTICS OF MANUFACTURING

Section 1.—Growth of Manufacturing

It is impossible to give absolutely comparable statistics of manufacturing over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, though numerous changes have since been made in the information collected and in the treatment of the data, an effort has been made to carry all major revisions back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The Bureau of Statistics in 1952 changed its policy with regard to the collection of statistics on the production of manufactured goods. Firms in several industries where year-end inventory changes were known to be insignificant were requested to report value of shipments f.o.b. plant instead of gross value of products. Under the "value of products" concept, establishments were asked to report the factory selling value of the products made whether sold or not, the unsold portion being assigned the average selling value of similar articles sold during the year. Under the "selling value of shipments" concept, establishments are required to report their sales during the year regardless of when the products were made, an item usually readily available from the firms' records. The changeover was made in order to ease the burden of reporting for the majority of manufacturing establishments. The value of shipments concept for small and medium sized establishments is more realistic and more readily obtainable from their accounting records, whereas the value of products made, for firms not recording such information, must be derived from special calculations.

1.—Summary Statistics of Manufactures, 1917-58

NOTE.—Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a comparable basis to the series given below. Statistics for significant years appear in the 1943-44 Year Book, p. 363. Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

Year	Estab- lish- ments	Employees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture ¹	Gross Value of Products ²
	No.	No.	\$	\$	\$	\$
1917.....	21,845	606,523	497,801,844	1,539,678,811	1,281,131,980	2,820,810,791

¹ For 1924-51, inclusive, the value added by manufacture is computed by subtracting the cost of fuel, electricity and materials from the gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available.

² In 1952 gross value of products was replaced by selling value of factory shipments; see text immediately preceding this table.

³ A change in the method of computing the number of employees in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.

⁴ Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included.

Provincial distribution of manufactures is shown for certain years from 1917 to 1957 in Table 2.

¹ See footnote 1, Table 1, p. 662.² In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 661.³ Excludes figures for the fish processing industry which are not available for 1949.⁴ See footnote 3, Table 1, p. 662.⁵ Includes Yukon Territory.

The figures in Table 3 trace the tendencies in manufacturing industries as clearly as possible from 1917 to 1957. In analysing statistics of production and materials used, price changes should be borne in mind, particularly the inflation of values in the years immediately following World War I, the drop in prices of commodities during the depressions following 1921 and 1930, and the increases again in World War II and the postwar period.

¹ A change in the method of computing the number of production workers in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. There was therefore a proportionate reduction in the averages for 1925-30 per employee as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are therefore comparable with those for 1924 and earlier years.

² Net value of products; see footnote 1, Table 1, p. 662.

³ In 1952 gross value of products was replaced by value of factory shipments; see text on p. 661.

Subsection 1.—Consumption of Manufactured Products

The value of all manufactured commodities made available for consumption in 1957 was \$23,458,088,464, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods, and deducting the value of the exports. More accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, wood and paper, non-ferrous metals, non-metallic minerals, animal and textile products were, in that order, the leading groups in the value of finished products made available for consumption in 1957.

Wood and paper, animal, and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups.

On balance, Canada in the past imported large quantities of iron and steel, textiles, chemicals and non-metallic mineral products despite large home production. The expansion of the iron and steel, chemical and non-metallic mineral products industries is enabling Canada to meet a greater proportion of domestic requirements.

4.—Consumption of Manufactured Products, Certain Years 1929-57 and by Industrial Group 1957

Totals, 1957.....	22,183,594,311	4,525,870,602	3,251,376,449	23,458,088,464

¹ In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 661.
² Figures for the years 1929 and 1933 are for the fiscal years ended Mar. 31 of the following years; 1939-57 figures are for the calendar year. Net imports are total imports less foreign products re-exported.
³ Consumption figures for the major standard industrial classification groups (see p. 671) cannot be calculated because statistics of imports and exports are compiled on the component material classification basis.

Subsection 2.—Value and Volume of Manufactured Production

Value of Manufactured Production.—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind. In recent years, owing to great changes in prices, unadjusted value series used in isolation

have become increasingly inadequate as indicators of economic trends. Consequently interest has shifted to measures of volume. The range of prices since 1929, on the base period 1935-39=100, is as follows:—

Year	General Wholesale Price Index	Price Index of Fully or Chiefly Manufactured Products
1929.....	124.6	123.7
1933.....	87.4	93.3
1939.....	99.2	101.9
1944.....	130.6	129.1
1946.....	138.9	138.0
1949.....	198.3	199.2
1953.....	220.7	228.8
1955.....	218.9	224.5
1956.....	225.6	231.5
1957.....	227.4	237.9

Volume of Manufactured Production.—Real income is ultimately measured in goods and services so that the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services and not whether they are expending more dollars and cents.

During the past few years the Dominion Bureau of Statistics has been engaged in the reconstruction of the index of industrial production* which was first published in 1926 and later subjected to several major revisions. The latest reconstruction was made possible by the availability of a great deal of basic data. Annual statistics valuable for this project have been collected by the Bureau from the end of World War I to the present and the scope of the monthly information has been greatly expanded. Applying methods developed through the experience of the past quarter-century, it has been possible to compute an index with a fair measure of accuracy from 1935 to the present.

The manufacturing sector is divided at the major group level into durable manufactures and non-durable manufactures. The movement of durable goods normally varies from that of non-durables; there tends to be greater fluctuation in durables from prosperity to depression and the demand for non-durables is more constant.

5.—Index of the Total Volume of Manufactured Production classified on the Basis of Durable and Non-durable Goods, 1935-57

(1949=100)

1945.....	88.2	99.8	92.9	1957.....	139.7	146.7	142.9
1946.....	89.8	79.9	85.2				

The period 1947-56 was characterized by unprecedented industrial expansion. The end of hostilities in 1945 and the subsequent reconversion to peacetime production were attended by declines in output but the upward trend was resumed in 1947. The rate

* For a description of the methods used in constructing the index and a description of its scope, see DBS publication *Revised Index of Industrial Production, 1935-1957* (Catalogue No. 61-502).

of advance slackened moderately in 1948 and 1949 but regained most of its 1947 impetus in 1950 when the outbreak of hostilities in Korea resulted in heavy anticipatory buying on the part of consumers and in growing expenditures for national defence. By 1952 the index of the volume of manufacturing production at 118.5 had surpassed the record wartime level of 106.1 established in 1944. The index continued to advance in 1953, dropped somewhat in 1954 but moved upward again to a new high of 145.1 in 1956. Then, as a result of the minor recession which began in the autumn of 1957, the index for that year slipped to 142.9.

Durable Manufactures.—In the postwar period the volume index of durable manufactures showed a steady advance, except for 1954, reaching a high of 153.3 in 1956. This upward climb was temporarily halted in 1957 when the index dropped to 146.7, a loss of 4.3 p.c. In 1957, all groups in the durable goods sector, with the exception of non-metallic mineral products, reported lower levels of production. The greatest decline of 8.0 p.c. was reported by the wood products group, followed by transportation equipment with 4.2 p.c., non-ferrous metal products 4.1 p.c., electrical apparatus and supplies 4.0 p.c., and iron and steel 3.9 p.c. The non-metallic mineral products group, which produces mainly building materials, managed to maintain the same level of production as in the previous year, a reflection of the high level at which the construction industry operated despite the general slackening in economic activity. On the other hand, the wood products group, which also produces building materials, reported the greatest decline of 8.0 p.c. in physical output, mainly caused by the continuing decline in exports of planks and boards, red cedar shingles, roofing squares and veneer and plywood. Not all industries in the transportation group were affected by the general slowing down in production. The motor vehicle industry with a decline of 12 p.c. in volume was the most severely affected, the number of motor vehicles produced dropping from 471,350 in 1956 to 413,577 in 1957. The motor vehicle parts industry was also affected to the extent of a 10-p.c. decline in output. Aircraft and shipbuilding, on the other hand, operated at higher levels, recording increases of 12 p.c. and 7 p.c., respectively. Railway rolling-stock was also slightly higher, showing an increase of 1 p.c.

6.—Indexes of the Volume of Manufactured Production of the Groups Comprised within the Durable Manufactures Classification, 1935-57

Non-durable Manufactures.—The trend of output among the individual groups of the non-durable sector of manufacturing in the postwar period was visibly smoother than in the durable sector but the general trend was the same—except for 1954, no interruption occurred in the upward movement of production—although this advance continued through 1957. Unlike durable goods, non-durable commodities are mostly consumer goods and are less influenced by sudden changes in the international situation or the capital investment programs of producers and governments. By 1957 the non-durables index of output had reached 139.7, the highest on record. For the group as a whole there was an increase of 1.2 p.c. in volume compared with 1956. Trends, however, were mixed. The majority of industrial groups reported increases in volume of production compared with 1956, the greatest being that of 10.3 p.c. shown by the tobacco and tobacco products group. This was followed by chemicals and allied products with an increase of 4.9 p.c., miscellaneous industries 4.3 p.c., beverages 3.5 p.c., products of petroleum and coal 3.4 p.c., foods 1.4 p.c., printing, publishing and allied trades 0.7 p.c. and textiles 0.3 p.c. Three groups reported declines in volume—rubber and rubber products reported a drop of 4.0 p.c., paper products 1.7 p.c. and clothing 0.7 p.c. The leather products group, which has experienced an erratic long-term trend, reported no change in 1957 after showing an 8.2-p.c. increase in 1956 over 1955.

7.—Indexes of the Volume of Manufactured Production of the Groups Comprised within the Non-durable Manufactures Classification, 1935-57

¹ Includes knitting mills.

Section 2.—Manufactured Production Variouslly Classified

Subsection 1.—Manufactures classified by Industrial Groups and Individual Industries

Manufacturing production in Canada, after a downward adjustment in 1954, began to move upward in the summer of 1955 and continued to improve at an accelerated rate throughout 1956 and most of 1957, with the result that the selling value of factory shipments for the latter year was the highest on record at \$22,183,594,311, exceeding the 1956 total by 2.5 p.c. The gain in selling value of shipments, however, was accounted for by higher prices and not by increased volume. Actually there was a drop of 1.5 p.c. in the volume of production. In employment the record was not as impressive as the increase in shipments. Although a record number of persons were employed in 1957, the increase over 1953 was only 2.4 p.c. This compares with an increase of 24.7 p.c. in value of shipments and a 13.1-p.c. increase in volume. Salaries and wages paid in 1957 at \$4,819,627,999 and value added by manufacture at \$9,822,084,726 were also the highest on record.

The decline in the export demand for Canadian manufactured products was an important factor adversely affecting manufacturing operations in 1957. As mentioned previously, there was a marked decline in the export of planks and boards, shingles, veneer and plywood. Wood pulp, newsprint, whisky, wheat flour, aluminum and products, copper and products, zinc, automobiles and parts, fertilizers and aircraft were all lower. There were, however, increases in exports of farm implements and machinery, nickel, artificial crude abrasives, non-farm machinery and synthetic plastics and their manufactures.

The magnitude of the development that has taken place in Canadian manufacturing in the postwar years is strikingly illustrated by the increase of 70.3 p.c. in the physical volume of manufactured products between 1946 and 1956, as compared with an increase of 31 p.c. in population. In the same comparison the increase in the volume of durable goods produced was 91.9 p.c. as against an increase of 53.8 p.c. in non-durables.

With only one exception, all groups in both the durable and non-durable goods sectors recorded marked advances in volume output in the ten-year period; the exception was leather products which showed a decline of 6.8 p.c. Among durable goods, the most striking advance was made by the electrical apparatus and supplies group with an increase of 182.6 p.c., followed by non-metallic mineral products with 166.0 p.c., transportation equipment 95.9 p.c., iron and steel products 79.8 p.c., non-ferrous metal products 62.6 p.c. and wood products 59.3 p.c.

Among the non-durables, the greatest advance was achieved by the products of the petroleum and coal group with an increase of 190.8 p.c. Chemicals and allied products followed with 100.9 p.c., miscellaneous industries 83.3 p.c., printing, publishing and allied industries 78.5 p.c., rubber goods 72.1 p.c., paper products 70.1 p.c., beverages 68.4 p.c., tobacco 61.0 p.c., textiles 32.2 p.c., foods 27.6 p.c. and clothing 23.4 p.c.

8.—Percentage Variations in Employment, Salaries and Wages and Selling Value of Factory Shipments in the Main Industrial Groups, 1957 Compared with 1956

¹ In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 661.

Detailed Statistics by Group and Individual Industries.—Table 10 presents detailed statistics for 1957 regarding the individual industries under which all industrial plants in Canada are classified. The industries are assembled under seventeen main groups according to the Standard Industrial Classification.

In interpreting the statistics of individual industries it should be noted that the figures on employment, production, etc., do not refer to individual products but to all the products produced by an industry. For example, the value of production of the confectionery industry amounting to \$133,719,169 in 1957 does not imply that this was the value of confectionery produced. What it means is that the firms whose principal product was confectionery had a value of production of \$133,719,169. This figure, in addition to confectionery, includes all the subsidiary products made by these firms, such as chewing gum valued at \$11,457,836, ice cream which was valued at \$3,688,629, and bread and other bakery products valued at \$886,870. Confectionery is also produced as a subsidiary product by firms credited to other industrial classifications. The quantities and values of the principal individual commodities produced are given in Table 11. Commodities produced in small quantities are not included, but the list covers approximately 75 p.c. of total production.

Subsection 2.—Manufactures classified by Origin of Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods.

12.—Principal Statistics of Manufacturing Industries classified according to Origin of Materials Used, by Main Group, 1957

Origin of Material Used	Estab-lish-ments	Em-ploy-ees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture	Selling Value of Factory Shipments

Subsection 3.—Manufactures classified by Type of Ownership

The figures showing the classification of the type of ownership under which Canadian manufacturers operate are available from 1946, although the first survey did not include the fish curing and packing industry. Its inclusion in subsequent years has not materially altered the percentage distribution of individual ownership, incorporated companies, etc.

As is to be expected, the smaller establishments, regardless of the type of products manufactured, are carried on under individual ownership. In that category industries conducted on a small scale contain a large number of establishments, the percentage decreasing as the scale of operations increases, as shown for 1957 in Table 13.

13.—Percentage Distribution of Manufacturing Establishments, Employees and Shipments, by Type of Ownership and Size of Establishment, 1957

Item and Type of Ownership	Under \$25,000	\$25,000 to \$99,999	\$100,000 to \$499,999	\$500,000 or Over
	p. c.	p. c.	p. c.	p. c.
Establishments—

Partnerships.....	16.1	16.5	6.9	0.2
Incorporated companies.....	13.3	39.5	79.3	98.7
Co-operatives.....	0.9	3.5	4.8	0.9
Totals.....	100.0	100.0	100.0	100.0

Of the 37,875 establishments operating in 1957, 1,623 establishments in the periodical publishing industry were unclassifiable, leaving 36,252 establishments in the four categories of ownership. Individual ownership numbered 14,721 establishments, partnerships 4,352, incorporated companies 16,260 and co-operatives 919. The percentage distribution of the four categories of ownership is given in Table 14 for 1948-57.

14.—Percentage Distribution of Establishments in Manufacturing Industries classified by Type of Ownership, 1948-57, and by Province and Industrial Group, 1957

¹ Four main categories of ownership only; the non-classifiable group is not included (see text on p. 681).

The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. According to Tables 15 and 16 these establishments, which comprise 41 p.c. of the number, had only 5 p.c. of the total employees. Partnerships accounted for 12 p.c. of the number of establishments and 2 p.c. of the total employees. Incorporated companies with 45 p.c. of the number of establishments had almost 92 p.c. of the employees. Co-operatives with 2 p.c. of the number had less than 1 p.c. of the employees.

On the basis of employment provided, incorporated companies are, by a wide margin, the most important factor in the employment field. In the petroleum and coal products group practically 100 p.c. of the employees were reported by such companies. Incorporated companies in the tobacco, rubber, paper, transportation equipment and electrical apparatus and supplies groups had 99 p.c. of the employees; non-ferrous metal products and chemical and allied products had 98 p.c.; textiles and iron and steel products 97 p.c.; knitting mills and non-metallic mineral products 94 p.c.; leather goods 93 p.c.; miscellaneous industries 90 p.c.; printing, publishing and allied industries 88 p.c.; clothing 85 p.c.; and foods and beverages 83 p.c. Companies in the wood products group, with 78 p.c., reported the lowest proportion of employment.

15.—Percentage Distribution of Employment in the Manufacturing Industries classified by Type of Ownership, 1948-57, and by Province and Industrial Group, 1957

Subsection 4.—Leading Manufacturing Industries

The ranks of the ten leading industries in 1957, from the standpoint of selling value of factory shipments, are compared with their respective ranks in significant years since 1922 in the following statement:—

Industry	1922	1929	1933	Rank in— 1939	1944	1949	1957
Pulp and paper.....	2	1	1	2	5	1	1
Petroleum products.....	9	10	6	6	14	5	2
Non-ferrous metal smelting and refining.....	1	9	2	1	2	3	3
Motor vehicles.....	6	4	11	5	7	4	4
Slaughtering and meat packing.....	3	2	3	3	1	2	5
Primary iron and steel.....	20	16	31	11	13	8	6
Sawmills.....	4	5	14	8	11	6	7
Butter and cheese.....	5	6	5	4	10	7	8
Aircraft and parts.....	1	1	1	1	4	1	9
Railway rolling-stock.....	24	7	23	16	16	9	10

¹ Did not rank among the forty leading industries that year.

A prominent feature of Canadian manufacturing development during this period has been the movement of non-ferrous metal smelting to one of the top three places, the advance of the primary iron and steel industry particularly since the war years and the increasing prominence of the petroleum industry. During the Second World War the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions. When the War ended, certain industries engaged in the production of consumer goods bettered their positions.

TRENDS IN CANADA'S LEADING MANUFACTURING INDUSTRIES 1954-57

During the past few years the ranking changed very little. In 1957, as compared with 1956, petroleum products moved ahead of non-ferrous metal smelting and refining, while aircraft and parts moved up from eleventh to ninth place and railway rolling-stock from twelfth to tenth place. Miscellaneous electrical apparatus and supplies and rubber goods which ranked ninth and tenth in 1956 dropped to eleventh and fifteenth place respectively in 1957.

17.—Principal Statistics of the Forty Leading Manufacturing Industries, ranked according to the Selling Value of Factory Shipments, 1957

¹ Reported on a production basis.

Section 3.—Principal Factors in Manufacturing Production

In addition to the factors dealt with in the following Subsections 1 and 2, one of the principle indicators of growth in manufacturing production is the amount paid as salaries and wages to various groups of employees within these industries. Detailed information on employment, earnings and hours is given in the Labour Chapter of this volume, Section 3.

Subsection 1.—Capital and Repair Expenditure

The present series of statistics covering expenditure on fixed capital and repairs by manufacturing industries commences with the year 1944.

Capital expenditures by manufacturers in 1957 totalled \$519,900,000 for construction and \$959,000,000 for machinery and equipment; in addition, \$613,900,000 was spent for repairs. Of the total capital expenditures amounting to \$1,478,900,000, 18.0 p.c. was reported by paper products, 12.1 p.c. by iron and steel products, 10.1 p.c. by chemicals and allied products, 9.8 p.c. by non-ferrous metal products, 8.8 p.c. by products of petroleum and coal, 7.9 p.c. by foods and beverages, 5.3 p.c. by non-metallic mineral products, 4.2 p.c. by transportation equipment, etc.

Of the groups reporting capital expenditures of \$50,000,000 or more in 1957, seven reported increases and only one—non-metallic mineral products—reported a decrease. Wood products, which was in the \$50,000,000-or-over group in 1956, also reported a decline which took it out of that category in 1957. Of the groups reporting increases, products of petroleum and coal with \$37,000,000 led the list, followed by non-ferrous metal products with \$27,000,000, iron and steel products with \$17,100,000, paper products with \$8,900,000, foods and beverages \$8,000,000, chemicals and allied products \$4,800,000 and transportation equipment \$2,100,000. Besides the non-metallic mineral products group which declined \$41,400,000 and wood products which reported a drop of \$11,800,000, the leather products group, down by \$700,000, was the only other group to report a decline in 1957.

Capital expenditures in 1957 increased by \$85,100,000 over 1956 compared with a record increase of \$447,500,000 in 1956 over the previous year. The average annual expenditure on capital assets, amounting to \$1,054,000,000 for the years 1951-57, reflects the expansion and modernization of the manufacturing industries of Canada during that period.

18.—Capital and Repair Expenditures by the Manufacturing Industries, 1948-57, and by Province and Industrial Group, 1957

Subsection 2.—Size of Manufacturing Establishments

The size of a manufacturing establishment is generally measured either by the value of factory shipments or by the number of employees but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery may lead to an increase in production concurrently with a decrease in number of employees.

Size as Measured by Selling Value of Factory Shipments.—In 1946, after heavy wartime production had ceased and reconversion had barely begun, there were 1,442 manufacturing establishments, each with an output of \$1,000,000 or over. Their combined production was valued at \$5,377,870,217 and accounted for 66.9 p.c. of the total for all manufacturing plants. By 1949, the number of factories in that category had increased to 1,926 and the proportion of their production to the total was 74.4 p.c. As a result of the tremendous industrial expansion and the increase in prices of the 1950's, the number of plants with shipments valued at over \$1,000,000 increased to 3,053 in 1957. These plants contributed 81 p.c. of the total output in that year.

¹ In 1952 gross value of products was replaced by selling value of factory shipments.

² Includes Newfoundland.

Size as Measured by Number of Employees.—In 1946 the 311 establishments employing 500 or more persons accounted for 32.3 p.c. of the total number of employees engaged in manufacturing. In 1957 there were 413 plants with more than 500 employees, 66 of them with over 1,500. The 413 plants employed 36.7 p.c. of the total workers in all manufacturing establishments.

Size of Establishments in Leading Industries.—Table 22 shows the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the motor vehicle, non-ferrous metal smelting and refining, aircraft and parts, railway rolling-stock, pulp and paper, rubber goods, cotton yarn and cloth, primary iron and steel, and heavy electrical machinery industries. On the other hand, the degree of concentration is low in such industries as factory clothing, furniture, butter and cheese, miscellaneous food preparations, fruit and vegetable preparations, bread and other bakery products, and sawmills.

PART III.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

Section 1.—Provincial Distribution of Manufacturing Production

This Section shows the distribution and concentration of the manufacturing industries in each province followed by a general analysis of the leading industries in the individual provinces. Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1957 amounted to \$17,758,187,739 or 80 p.c. of the total factory shipments of manufactured products. The water power and other varied resources of the two provinces and their nearness to the larger markets of Canada and the United States have contributed to this progress.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of tobacco and tobacco products, textiles and clothing and paper products. In each of the other groups Ontario has the greater production of the two provinces. In the production of wood products British Columbia, with 39 p.c. of the total, holds the dominant position, outranking both Ontario and Quebec which account for 26 and 23 p.c., respectively, of the total. In each of the other groups Ontario and Quebec lead by a wide margin.

Subsection 1.—The Manufactures of the Atlantic Provinces

The Atlantic Provinces are of economic importance in a number of fields, such as pulp and paper, fish processing, sawmills and primary iron and steel. In *Newfoundland* manufacturing production is dominated by the forest and fisheries resources. Pulp and paper is by far the most important industry, having shipments valued at \$63,302,987 in 1957, followed by fish processing with shipments of \$16,408,800. These two industries accounted for 68 p.c. of the total production of the province. In *Prince Edward Island* agriculture and fishing resources make butter and cheese, slaughtering and meat packing, and fish processing the leading industries. *Nova Scotia* is renowned for its coal mines, its fisheries and its extensive forests and agricultural lands; it is also favoured with easy access by sea to the high-grade iron ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, fish processing, shipbuilding, pulp and paper and sawmills. In addition, an important petroleum refinery and industries producing railway rolling-stock, cotton yarn and cloth, and coke and gas add to the diversification of industry in the province. The forests of *New Brunswick* give a leading place to pulp and paper and sawmilling industries in the province. Other important manufacturing and processing activities are based on fish and agricultural resources.

Considering the Atlantic Provinces as an economic unit, pulp and paper was the leading industry in 1957 with factory shipments valued at \$179,676,000. Fish processing and packing with factory shipments valued at \$81,181,000 was in second place. Other leading industries, in order of importance and with shipments exceeding \$30,000,000, were: petroleum products, primary iron and steel, sawmills, sugar refining and railway rolling-stock. These seven industries accounted for 58 p.c. of the total value of factory shipments of the Atlantic Region. Other leading industries with shipments of \$10,000,000 to \$30,000,000 were, in order of importance: butter and cheese, shipbuilding and repairs, bread and other bakery products, slaughtering and meat packing, miscellaneous food preparations, sash, door and planing mills, printing and publishing, coke and gas products, breweries, prepared stock and poultry feeds, carbonated beverages and miscellaneous iron and steel products.

In the Atlantic Provinces the program of industrial development has been more selective than in some of the other provinces. Fish processing, new sawmills, increased pulp-making capacity and the manufacture of non-metallic building materials like cement and gypsum products have accounted for well over half of the industrial growth. There are, however, a few outstanding exceptions. Two sizable defence plants have been established in Nova Scotia, one to repair and overhaul naval aircraft and the other to build and repair radar and related electronic equipment. Considerable development has taken place in Newfoundland. Besides plants for the manufacture of cement and gypsum wallboard and plaster, factories for producing boots and shoes, birch veneer, leather goods, industrial machinery and tanned leather were established, thus broadening the industrial base of the province. With these exceptions, most of the developments in the Atlantic Provinces have been either small and scattered or confined to the modernization and expansion of existing facilities.

Despite the rapid development in the Atlantic Provinces since 1949, manufacturing production in that area did not quite keep pace with the development in the more industrialized provinces of Ontario, Quebec and British Columbia. This is indicated by a slight drop in the Atlantic Provinces' share of the Canadian total from 4.5 p.c. in 1949 to 4.0 p.c. in 1957. In number of persons employed there was an increase of 1.3 p.c. for the Atlantic Provinces as compared with an increase of 15.8 p.c. for Canada as a whole. For salaries and wages paid the increase was 57.2 p.c. as compared with 85.8 p.c. for Canada, and in selling value of factory shipments the increase was 53.3 p.c. for the Atlantic Provinces and 77.6 p.c. for Canada as a whole. Increased employment since 1949 reported by Newfoundland and Nova Scotia was offset by declines in Prince Edward Island and New Brunswick.

The drop in manufacturing employment in 1957 compared with 1956 in the Atlantic Provinces was 1.1 p.c., accompanied by an increase in the selling value of factory shipments of 4.6 p.c. This compared with an increase of 0.4 p.c. in employment and 2.5 p.c. in factory shipments for Canada as a whole. Nova Scotia manufacturers operated at a higher level in 1957 than in 1956 with an increase of 1.9 p.c. in employment and 11.2 p.c. in selling value of factory shipments. Both Newfoundland and New Brunswick reported decreases in employment and value of shipments and Prince Edward Island, although reporting lower employment, had slightly higher shipments.

¹ Publication of these figures was authorized by the firms concerned.² Reported on a production basis.

* Includes dairy products, n.e.s.; cement, hydraulic; gypsum products; miscellaneous food preparations; paints, varnishes and lacquers; railway rolling-stock; and slaughtering and meat packing. † Includes bags, cotton and jute; fertilizers; and slaughtering and meat packing. ‡ Includes breweries; cotton yarn and cloth; boxes and bags, paper; bridge and structural steel work; wire and wire goods; miscellaneous iron and steel products; aircraft and parts; railway rolling-stock; salt; coke and gas products; and petroleum products. § Includes breweries; brass and copper products; brooms, brushes and mops; cement, hydraulic; railway rolling-stock; shipbuilding; and sugar refining.

Subsection 2.—The Manufactures of Quebec

Quebec has long ranked as the second largest industrial province of Canada. The province experienced a great industrial expansion following World War II, an expansion not confined to existing industrial areas, but spreading to many towns and villages in the accessible areas of the province and into new areas in the hinterland. In 1957 its output of \$6,679,595,056 represented about 30 p.c. of Canada's total selling value of factory shipments.

Several important factors have contributed to the development of industry in Quebec. Its geographic situation is extremely favourable including as it does the great water highway of the St. Lawrence River with its excellent harbour at Montreal 800 miles inland. There is also an extensive road network linking the small rural areas to the larger industrial centres. Other significant factors include abundant natural resources in forests, water power, minerals, agricultural lands and, of even more importance, an industrious and stable population.

Quebec ranks first in available water power resources, having almost 31 p.c. of the total recorded for all Canada. Installations, approaching 9,000,000 hp. at the end of 1957, represented about 45 p.c. of the total for Canada.

The pulp and paper industry, with an output valued at \$596,214,819 in 1957, is Quebec's leading manufacture. The province is a principal world centre for the production of newsprint, having 55 major pulp and paper plants concentrated in the Trois Rivières and Shawinigan Falls districts, as well as along the Saguenay, Ottawa and St. Lawrence Rivers. The production of non-ferrous metals has expanded considerably during the past decade. Aluminum, which until a few years ago was produced only in Quebec, is now also produced in British Columbia but Quebec still maintains its impressive lead in the

output of this metal. The province, in its Montreal area, also boasts the major oil refinery district in the country. Perhaps the most important industrial development in Quebec today is the Ungava iron ore project. The exploitation of the huge ore deposits in this area will expand the industrial base of the province and assure its future development.

Quebec's industries are not as diversified as those of Ontario, although a number produce more than half of the Canadian total. The manufacture of pulp and paper occupies the premier position; by the end of 1957 it accounted for about 9 p.c. of the gross value of Quebec's manufactures and for 42.2 p.c. of the Canadian total for this industry. Other large industries in which Quebec predominates include: tobacco, cigars and cigarettes with 91.2 p.c. of the Canadian total production; women's factory clothing with 70.1 p.c.; cotton yarn and cloth 68.7 p.c.; men's factory clothing 54.2 p.c.; synthetic textiles 50.5 p.c.; miscellaneous electrical apparatus and supplies 48.3 p.c.; railway rolling-stock 43.5 p.c.; shipbuilding and repairs 42.8 p.c.; aircraft and parts 38.1 p.c.; acids, alkalies and salts 37.2 p.c.; petroleum products 36.4 p.c.; brass and copper products 36.4 p.c.; non-ferrous metal smelting and refining 35.8 p.c.; miscellaneous chemical products 35.8 p.c.; and furniture 34.0 p.c. Two medium-sized industries with total Canadian shipments of over \$100,000,000 also predominate in Quebec—leather footwear with 56.3 p.c. of the Canadian total production and medicinal and pharmaceutical preparations with 44.9 p.c.

Despite the slowing down of Canadian production which began in the autumn of 1957, Quebec recorded a small increase of 0.9 p.c. in employment and 0.7 p.c. in the selling value of factory shipments in 1957 compared with the previous record highs reported in 1956. The non-durable goods industries, which contribute about 65 p.c. of the total manufacturing production of the province, reported an increase in 1957 of 4.1 p.c. in the selling value of factory shipments and 0.6 p.c. in the number of persons employed. The durable goods industries on the other hand reported a drop of 4.6 p.c. in shipments but an increase of 1.0 p.c. in number of employees.

¹ Sugar refining is also a leading industry but statistics are confidential.

Subsection 3.—The Manufactures of Ontario

Ontario is one of the world's major industrial areas. Here the proximity of raw materials, cheap hydro-electric power, and a strategic location in relation to export markets, not only on this Continent but overseas, have been the decisive factors of development. Most of the manufactures and most of the population are located in the southern area of the province, which has the inestimable advantage of bordering on the St. Lawrence-Great Lakes waterway system, giving access westward to the heart of the Continent and eastward to the shipping routes of the world. Furthermore, this same waterway is also the source of most of Ontario's developed hydro-electric power. Many new industrial areas are being created as new industries and branch plants of established industries are increasingly being located in the smaller towns.

Despite the great industrial progress made by other provinces, Ontario continues to maintain its predominance and in 1957 produced about 50 p.c. of the nation's manufactured goods. A vast increase of steel ingot capacity is being made possible by developments at the Steep Rock Iron Mines, northwest of Lake Superior. Huge investments have gone into the construction of plant and equipment for a whole group of new products based on Alberta oil flowing eastward by pipeline. Significant developments are taking place in synthetic rubber, synthetic textiles, and industrial and consumer chemicals. Ontario has continued to gain in such traditional lines as motor vehicles, industrial and farm machinery, and the manufacture of household equipment. The same may be said of other "hard" goods like business and office machinery and electrical apparatus and supplies. Numerous plants making aircraft components and building materials have favoured the Toronto area, while chemical and synthetic textile plants have been rising in the vicinity of Sarnia and along the lower reaches of the St. Lawrence River between Cornwall and Kingston.

Ontario has the greatest diversification of manufacturing production of any province. Certain industries, such as the manufacture of motor vehicles, motor vehicle parts, heavy electrical machinery, agricultural implements, machine tools, starch and glucose, and the processing of raw tobacco are carried on practically in this province alone. Of the forty leading industries in Canada in 1957, a substantial number were dominated by Ontario's share of the total production. These industries, with the percentage which the production of each bears to that of the 1957 Canada totals, were: motor vehicles 98.8 p.c., motor vehicle parts 94.5 p.c., heavy electrical machinery 90.7 p.c., rubber goods 81.5 p.c., primary iron and steel 77.4 p.c., telecommunications equipment 77.0 p.c., iron castings 69.9 p.c., fruit and vegetable preparations 67.6 p.c., sheet metal products 59.1 p.c.,

industrial machinery 58.9 p.c., miscellaneous chemical products 58.2 p.c., printing and bookbinding 57.8 p.c., brass and copper products 57.5 p.c., acids, alkalies and salts 55.3 p.c., aircraft and parts 54.8 p.c., boxes and bags, paper 50.4 p.c., furniture 49.0 p.c., printing and publishing 48.2 p.c., non-ferrous metal smelting and refining 47.7 p.c., synthetic textiles 47.3 p.c., miscellaneous electrical apparatus and supplies 47.0 p.c., and stock and poultry feeds 45.6 p.c.

The medium-sized industries with a total Canadian production of over \$100,000,000 in which Ontario dominated included: agricultural implements with 90.0 p.c., soaps and washing compounds 88.4 p.c., refrigerators, vacuum cleaners, etc., 80.7 p.c., household and office machinery 79.7 p.c., hardware, tools and cutlery 74.0 p.c., heating and cooking apparatus 68.3 p.c., and confectionery 57.7 p.c.

The manufacturing industries of Ontario produced the highest selling value of factory shipments on record in 1957, amounting to \$11,078,592,683, an increase of 4.0 p.c. over the previous year. Accompanying this increase in shipments was an increase of 4.5 p.c. in the number of persons employed, which totalled 644,245 in 1957.

Subsection 4.—The Manufactures of the Prairie Provinces

In the Prairie Provinces the leading industries have traditionally been those based on agricultural resources—grain-growing, cattle-raising and dairying areas. But recently slaughtering and meat packing has emerged as the major industry followed very closely by petroleum products. The latter industry has made tremendous strides in the Prairie Provinces since 1949 and now ranks highest in terms of selling value of factory shipments in Saskatchewan and second in both Manitoba and Alberta. It has increased its proportion of the total manufacturing production of the Prairie Provinces from 8.5 p.c. in 1949 to 16.6 p.c. in 1957. Next in importance generally are flour mills and dairy products followed by industries providing for the more essential needs of the resident population, such as the baking of bread, printing and publishing, etc. In Manitoba, the early commercial centre of the Prairie Provinces, water power, forest and, more recently, mineral resources have given rise to a diversification of industrial production. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. In Saskatchewan, while the main economic role continues to be played by agriculture, the production of petroleum products occupies first place with a selling value of factory shipments more than double that of flour mills, which ranks second.

In the Prairie Provinces the nature of development varies from one province to another. Alberta, with its expanding oil and gas industries, has moved to the forefront, especially since 1950. Chemicals, particularly petrochemicals, have made striking gains, and now embrace various rayon intermediates and polythene plastics, as well as fertilizers and the manufacture of other inorganic products such as caustic soda and chlorine. Agriculture-based products still rank high in the province, as do structural materials such as steel, concrete products and hydraulic cement. Sizable gains have also been made by the expansion of food-processing plants.

Manitoba, next to Alberta in value of shipments, experienced great development in manufacturing production during the past decade although, on a percentage basis, it did not keep pace with the other Prairie Provinces. The change has been largely one of emphasis rather than magnitude—that emphasis moving from production of food and clothing to production of goods of mineral origin such as iron and steel, non-metallic mineral products, and products of petroleum and coal.

Developments in Saskatchewan have continued along more or less traditional lines. The largest gains in shipments have been recorded by the food processing industries and a substantial increase has also been shown by the building materials group, which includes non-metallic mineral products and lumber. However, the largest single gain in employment has been in the refining of oil for local use.

Considering the Prairie Provinces as an economic unit, 4,327 manufacturing establishments reporting in 1957 furnished employment to 94,985 persons who received \$318,153,043 in salaries and wages. They shipped goods valued at the factory at \$1,755,125,360 and spent \$1,030,039,991 for materials.

¹ Reported on a production basis.² Includes aircraft and parts; bridge and structural steel work; cement, hydraulic; gypsum products; non-ferrous metal smelting and refining; primary iron and steel; and sugar refining.³ Hydraulic cement and non-ferrous metal smelting and refining are also leading industries. Statistics, however, are confidential since there are fewer than three firms reporting.⁴ Includes fertilizers; non-ferrous metal smelting and refining; railway rolling-stock; and sugar refining.

Subsection 5.—The Manufactures of British Columbia

British Columbia, with factory shipments totalling \$1,785,298,750 in 1957, ranked third among the provinces in manufacturing production. Forest resources, fisheries, minerals and electric power have given a broad base and wide diversification to its industrial development. British Columbia holds the dominant position among the provinces in the production of wood products, its output in 1957 making up 39 p.c. of the Canadian total. Sawmilling, pulp and paper, veneer and plywood, and sash, door and planing mills ranked first, second, fourth and fifth, respectively, in 1957. Third in importance was the petroleum products industry which moved up from seventh place in 1953 as a result of the completion of the Trans Mountain oil pipeline. The province also accounted for approximately 42 p.c. of the output of the nation's fish processing industry in 1957 and is mainly responsible for Canada's position as a major fish exporting nation.

Recently, many new developments have been taking place in areas far removed from older established industrial centres. A new railway cutting diagonally across the province from south to north has opened up the formerly locked interior of the province. Factories and plants in remote sections are drawing greater value in employment and dollars from natural resources. The growth of the province industrially may be indicated by the increase in employment—one and one-half times the prewar figure. In dollar terms, gross value of manufacturing has increased 620 p.c. since 1939. The consumption of 7,278,000,000 kwh. of electric power by manufacturers during 1957 marked a steady upward climb of 230 p.c. in the past decade. British Columbia ranks second among the provinces in available water power resources and its hydraulic development, which at the end of 1957 totalled 3,122,460 hp., was exceeded only by Quebec and Ontario.

The trend of manufacturing production in British Columbia curved slightly downward in 1957. Both employment and value of shipments declined, the former dropping 2.7 p.c. and the latter by 4.0 p.c. compared with an increase of 2.5 p.c. in value of factory shipments and 0.4 p.c. in employment for Canada as a whole. This recession followed several years of rapid expansion. During 1954, when the remainder of Canada was experiencing a minor recession, British Columbia was the only province to report increased employment, the increase being 2.2 p.c. For Canada as a whole there was a drop of 4.5 p.c. in the number of employees and 1.3 p.c. in value of shipments. Although British Columbia was not the only province to report increased shipments that year, its increase of 7.9 p.c. was, however, the highest of any province. In common with other provinces, manufacturing in British Columbia continued to expand during 1955 and 1956. From 1953 to 1957 employees in British Columbia advanced 12.6 p.c. compared with an increase of 2.4 p.c. for Canada, and the value of factory shipments was 30.6 p.c. higher for British Columbia compared with an increase of 24.7 p.c. for Canada as a whole.

¹ Reported on a production basis.² Non-ferrous metal smelting and refining is also a leading industry. Statistics, however, are confidential since there are fewer than three firms reporting.

Section 2.—Manufacturing Industries in Urban Centres

Table 8 indicates the extent to which the manufacturing industries are concentrated in urban centres and shows, by province, the proportion of the selling value of factory shipments contributed by cities and towns having shipments of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns accounted for 79 p.c. and 95 p.c., respectively, of the total manufactures of those provinces in 1957, while in the Atlantic Provinces and British Columbia, where sawmilling, fish packing and dairying are leading industries, the proportions were 68 p.c. and 50 p.c., respectively. In the Prairie Provinces, manufacturing is confined largely to a few urban centres.

A trend towards the decentralization of industry is apparent in all provinces but the most striking change has been shown by Ontario where there has been a recent tendency to establish new industry in smaller urban centres and where many new one-industry areas have been opened up. For Canada as a whole the percentage of manufactures accounted for by urban centres having shipments of over \$1,000,000 was 85.8 in 1954 but dropped to 80.6 by 1957.

8.—Urban Centres, Each with Selling Value of Factory Shipments of Over \$1,000,000, Number of Establishments and Total Shipments in these Centres as a Percentage of the Provincial Total, by Province, 1957, and Totals for Canada, 1955-57.

CHAPTER XV.—CAPITAL EXPENDITURES, CONSTRUCTION AND HOUSING

CONSPECTUS

	PAGE		PAGE
SECTION 1. CAPITAL EXPENDITURES ON CONSTRUCTION AND ON MACHINERY AND EQUIPMENT.....	710	Subsection 2. Contracts Awarded and Building Permits Issued.....	724
SECTION 2. THE CONSTRUCTION INDUSTRY...	717	SECTION 3. HOUSING.....	730
Subsection 1. Value of Construction Work Performed.....	717	Subsection 1. Government Aid to House-Building.....	730
		Subsection 2. Housing Activities in 1959..	733

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 describes the purpose of capital expenditures and shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity: value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Government aid to house-building and construction of dwelling units are covered in Section 3.

Section 1.—Capital Expenditures on Construction and on Machinery and Equipment

Capital expenditure plans of all sectors of the economy call for a total outlay of an estimated \$8,770,000,000 in 1960. Such a capital program, if carried out as planned, will be the largest on record, exceeding the previous peak of \$8,717,000,000 established in 1957 and involving a 4-p.c. increase over the program accomplished in 1959. Within the total, construction outlays are expected to reach a record amount moderately in excess of the levels of the past few years, and expenditures for machinery are likely to show a significant improvement over those made in 1958 and 1959 and to approach the record level of 1957.

1.—Capital Expenditures on Construction and on Machinery and Equipment, 1950-60

NOTE.—Actual expenditures 1950-58; preliminary actual 1959; intentions 1960.

Year	Capital Expenditures			Total Expenditure as Percentage of Gross National Product
	Construction	Machinery and Equipment	Total	
	\$'000,000	\$'000,000	\$'000,000	p.c.
1950.....	2,453	1,483	3,936	21.9
1951.....	2,871	1,868	4,739	22.4
1952.....	3,434	2,057	5,491	22.9
1953.....	3,756	2,220	5,976	23.9
1954.....	3,737	1,984	5,721	23.0
1955.....	4,169	2,075	6,244	23.0
1956.....	5,273	2,761	8,034	26.3
1957.....	5,784	2,933	8,717	27.4
1958.....	5,830	2,534	8,364	25.7
1959.....	5,798	2,613	8,411	24.3
1960.....	5,942	2,828	8,770	..

While there are indications of a fairly moderate increase in total private and public investment in 1960, the composition of the program will be changed significantly from that of the previous two years as shown in Table 2.

2.—Capital Expenditures and Percentage Distribution, by Type, 1958-60

NOTE.—Actual expenditures 1958; preliminary actual 1959; intentions 1960.

Type	Capital Expenditures			Distribution		
	1958	1959	1960	1958	1959	1960
	\$'000,000	\$'000,000	\$'000,000	p.c.	p.c.	p.c.
Construction.....	5,830	5,798	5,942	69.7	68.9	67.8
Housing.....	1,782	1,759	1,696	21.3	20.9	19.3
Non-residential construction.....	4,048	4,039	4,246	48.4	48.0	48.5
Machinery and Equipment.....	2,534	2,613	2,828	30.3	31.1	32.2
Totals.....	8,364	8,411	8,770	100.0	100.0	100.0

Of particular importance is the resurgence in business investment anticipated, following the sharp decline in 1958 and the further easing in 1959. On the other hand, outlays for housing and social capital are likely to constitute a smaller part of the total investment program, showing an increase of about 1 p.c. compared with increases of 14 p.c. and 6 p.c. in 1958 and 1959 respectively. This change in emphasis from social to business capital is related to the changes occurring in general economic conditions and reflects future demand trends anticipated by businessmen. Substantial additions to industrial plant and equipment in 1957 and 1958 coincident with a temporary weakening in market demands resulted, for a time, in considerable free capacity in many industries. However, during 1959 markets strengthened both at home and abroad, production increased and operating levels moved upward. This, in turn, created new interest in expansion. At the same time, improved earnings together with increases in depreciation reserves added to the supply of internal funds available for expansion or modernization purposes.

Thus, developments in 1959 created a much more favourable atmosphere for an increased rate of business investment and, as a result, business capital outlays in 1960 are expected to show an increase of 6 p.c. over those of 1959. A sharply increased rate of spending in resource-based industries will provide the most important contribution to the total increase in investment. Outlays in the forest and mineral products industries are likely to be about 20 p.c. higher, reflecting a substantially higher rate of spending for new facilities in the base-metal mining and primary iron and steel industries and in forest-based industries. Investment in commercial building is expected to be notably higher in 1960, with increases planned in retail outlets and office buildings, and secondary manufacturing industries also intend to expand their outlays significantly. On the other hand, capital spending by the fuel and power, and transportation and communication industries will involve little change from 1959. Within the category of engineering construction, moderate increases in road-building and in the construction of water and sewer works and telephone facilities will be offset by equally moderate declines in marine and railway construction and in the building of power facilities.

Expenditures for housing and social capital are expected to continue at about the levels of 1959. Within the total, a reduced level of spending on federal projects will help to make way for larger programs in other fields. Housing outlays are also expected to be moderately lower in 1960; it is estimated that the number of new housing units started will be from 10 to 15 p.c. fewer than the 141,300 starts of 1959. However, with 82,000 units under construction at the start of the year, completions are expected to be close to the 1959 level of 146,000. The value of housing completed in 1960 will involve a decline of about 4 p.c. from 1959. Reduced outlays in the two areas of federal projects and housing will be offset by moderate increases in the construction programs of provincial and municipal governments and by a sharply higher rate of activity in the building of hospital and university facilities.

The acquisition of machinery and equipment will receive greater emphasis in the 1960 investment program than it received in the two previous years. Machinery purchases are expected to increase by about 8 p.c. over 1959 but will be slightly below the all-time record for such expenditures established in 1957. The demand for industrial machinery particularly will be strong in view of the projected increase of 17 p.c. in such outlays by the manufacturing industry. More moderate increases in demand may be anticipated for office, store and hospital equipment, and for transportation equipment other than railway rolling-stock, the latter being the only major type of equipment for which a lower level of demand is indicated.

3.—Summary of Capital and Repair Expenditures, by Economic Sector, 1958-60

NOTE.—Actual expenditures 1958; preliminary actual 1959; intentions 1960.

A summary of the capital expenditures in each province for the years 1958-60 is given in Table 5. Such expenditures represent gross additions to the capital stock of the province and are a reflection of economic activity in that area, but the actual production of these assets may generate its major employment in income-giving effects in other regions. For example, the spending of millions of dollars on oil refineries and pipelines in Western Canada means activity in the steel industries of Ontario as well as construction activity in the Prairie Provinces.

5.—Capital and Repair Expenditures, by Province, 1958-60

NOTE.—Actual expenditures 1958; preliminary actual 1959; intentions 1960.

(Millions of dollars)

Table 3 are due to rounding of figures.

² Slight differences in totals from those shown in

Section 2.—The Construction Industry

Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures which appear in Section 1.* The data represent the estimated total value of all new and repair construction performed by contractors; labour forces of utility, manufacturing, mining and logging firms; and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Canada's construction program for 1959 is estimated at \$7,129,000,000, slightly above the 1958 total. Repair construction, estimated to be about \$37,000,000 higher than in 1958, more than accounted for the advance; the value of new construction was lower by about \$33,000,000.

* An explanation of sources and methods is given in DBS annual report *Construction in Canada* (Catalogue No. 64-201).

6.—Value of New and Repair Construction Work Performed, 1950-59

NOTE.—Actual expenditures 1950-58; preliminary actual 1959.

Year	New	Repair	Total	Total Construction as Percentage of Gross National Product
	\$'000,000	\$'000,000	\$'000,000	p.c.
1950.....	2,453	827	3,280	18.2
1951.....	2,871	987	3,858	18.2
1952.....	3,434	1,010	4,444	18.5
1953.....	3,756	1,070	4,826	19.3
1954.....	3,737	1,105	4,842	19.5
1955.....	4,167	1,141	5,308	19.6
1956.....	5,272	1,182	6,454	21.4
1957.....	5,785	1,238	7,023	22.3
1958.....	5,831	1,261	7,092	21.8
1959.....	5,798	1,331	7,129	20.6

Table 7, which compares contract construction with other construction, shows that contractors account for from 76 p.c. to 79 p.c. of the work each year.

7.—Value of Construction Work Performed, by Contractors and Others, 1956-59

NOTE.—Actual expenditures 1956 to 1958; preliminary actual 1959.

(Millions of dollars)

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 11. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but, in addition, are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

11.—Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1955-59

NOTE.—Actual expenditures 1955-58; preliminary actual 1959.

Subsection 2.—Contracts Awarded and Building Permits Issued

In this Subsection statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

12.—Value of Construction Contracts Awarded, 1924-59

Hamilton.....	66,150	77,167	Victoria.....	17,478	23,503

Tables 16 and 17 show the volume and value of building permits by province. These figures are useful when appraising the construction activity within and among municipalities. Comparisons of construction costs would not be warranted, however, without assurance that structures of similar size and quality were being compared. Despite limited application, this information constitutes one of the few indices of current economic activity in smaller localities.

The relative material was compiled from municipal figures and therefore varies with the terms of individual by-laws, with the methods of estimating the value of local construction and with other factors which may differ from area to area. Information is not available on the permits allowed to lapse without the relative construction being undertaken.

¹ Provincial totals do not add to the Canada totals because of rounding of the figures and because certain minor adjustments could not be distributed provincially.

The indexes given in Table 18 show as far as possible the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied.

Section 3.—Housing*

Subsection 1.—Government Aid to House-Building

Federal Assistance.—The role of the Federal Government in housing has expanded progressively since the introduction of the first continuing statute in 1935. Although the Government originally entered the housing field in 1919, when it made money available to the provinces for re-lending to municipalities for housing purposes, the first general piece of federal housing legislation was the Dominion Housing Act passed in 1935. This was followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with the present National Housing Act, defined as “an Act to promote the construction of new houses, the repair and modernization of existing houses and the improvement of housing and living conditions”. Central Mortgage and Housing Corporation, a Crown agency incorporated by Act of Parliament in 1945, administers the National Housing Act and co-ordinates the activities of the Federal Government in housing. The Corporation assumes authority and responsibility for a variety of functions affecting housing in its long-term outlook as well as in its immediate requirements. It is empowered to act as an insurer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an owner of property and other assets. It can also act as a research agency in fields associated with housing and can enter into partnership with both provincial and municipal governments to assist in housing.

In general, the Government, through the successive Housing Acts, has attempted to stimulate and supplement the market for housing rather than assume direct responsibilities which rightfully belong to other levels of government or which could more effectively be borne by private enterprise. In each case the aim has been to increase the flow of mortgage money and to encourage lenders to make loans on more favourable terms to prospective owners.

The volume of house-building in Canada since 1935 has been spectacular. Close to half of the country's present stock of more than 4,000,000 houses have been built since the first covering legislation was enacted; about one-third of these were financed in one way or another under the Housing Acts.

Under the terms of the National Housing Act, 1954 and its subsequent amendments, the Federal Government is active in many ways.

Loan Insurance.—Mortgage loans made by approved lenders may be insured for home ownership and for rental housing. They are normally available from approved lenders to individual home-owner applicants, to builders constructing houses for sale or for rent, to rental investors or to some special groups such as co-operative housing associations, farmers and defence workers. Upon application the borrower pays the Corporation a fee of \$35 per unit to help defray expenses incurred in the examination of plans and specifications, in the determination of lending values and in compliance inspections during construction. An approved lender may require that a home owner or home purchaser provide 10 p.c. of the value of the house from his own resources. For the home owner this equity may be in the form of cash, or a combination of cash, land and labour; for the home purchaser it is in cash. The regulations require that gross debt service—the ratio of repayments of principal, interest and taxes to the income of the borrower—should not exceed 27 p.c. Instances involving higher ratios may be considered on their merits by the approved lender and the Corporation.

The borrower pays an insurance fee which is added to the amount of the loan and is repaid over the term of the mortgage. In the case of a loan for a home-owner unit the borrower pays a fee of 2 p.c. of the loan if mortgage advances are required during construction and $1\frac{3}{4}$ p.c. if the total loan is advanced when construction is complete. On a rental loan the borrower pays $2\frac{1}{2}$ p.c. of the loan if advances are required during the construction and $2\frac{1}{4}$ p.c. if the loan is not required until construction is complete. In some areas, lenders have arranged to make the inspections for progress advances.

* Prepared in the Information Division, Central Mortgage and Housing Corporation, Ottawa.

For single-family home ownership, loans may be up to 90 p.c. of the first \$12,000 of lending value and 70 p.c. of the balance but may not exceed a total of \$12,800, plus the insurance fee. For multiple-rental dwellings the loan may not exceed 80 p.c. of the lending value with a maximum of \$8,250 per family unit. For loans for types other than single home-owner units, the maximum loan varies with the type of unit. The period of repayment for home-owner loans must be at least 25 years (unless a lesser period is requested in writing by the borrower) and not more than 30 years. Rental loans are repaid over 25 years and home conversion loans over 15 years, unless lesser periods are requested by the borrowers. Repayments are made in equal monthly instalments including principal, interest and municipal taxes. The maximum interest rate is prescribed by the Governor in Council; on Dec. 17, 1959 it was increased from 6 p.c. per annum to 6½ p.c.

Loans.—Sect. 40 of the National Housing Act authorizes the Corporation to make any type of loan that may be made by an approved lender under Part I of the Act (home-owner, defence worker, co-operative, builder or rental) or under Sect. 15 (rental guarantee projects where in the opinion of the Corporation a loan is not available to a satisfactory applicant through an approved lender). By Government policy, direct loans for rental guarantee projects have not been made in recent years. Loans corresponding to Part I loans have in the past been restricted in general to home ownership in the smaller urban centres. On May 22, 1958, however, direct lending was extended to include builders in any area and home owners in the larger centres, with the loans subject to size limitations which place the house in the small home category. Loans were made through agents of the Corporation between Sept. 3, 1957 and the suspension of the arrangements, which occurred for rental loans on Feb. 8, 1959 and for home-owner and builder's loans on Apr. 10, 1958. Funds that were available to CMHC under the statutory vote for direct lending purposes were fully committed in the first 10 months of 1959 and it was necessary to stop accepting new applications on Oct. 30.

Under Sect. 16 of the National Housing Act, the Corporation, with Government approval by Order in Council, may make a loan to a limited-dividend housing company to assist in financing the construction of a low-rental housing project or in the purchase of existing buildings and their conversion into a low-rental housing project. The dividends of the company are limited by the terms of its charter to 5 p.c. or less of paid-up share capital. A loan under Sect. 16 may not exceed 90 p.c. of the lending value which is established by the Corporation. The period for repayment may not exceed the useful life of the project and in any case may not be for more than 50 years. The interest rate is established by Order in Council. The 10-p.c. equity must be provided by the borrower in cash in advance. The company must present evidence that conditions of shortage, overcrowding or substandard housing exist in the district. Plans and specifications must be approved by the Corporation. The borrower pays to the Corporation an application fee of \$35 for each housing unit in the project. This may be reduced to \$17.50 a unit if evidence is submitted that dividends payable will not be taxable under the Income Tax Act when received by the shareholders.

Limited-dividend projects are subject to proven end costs. The total loan plus the equity must not exceed the actual cost of the project. If final costs are less than originally established, the loan is reduced proportionately. The loan is also reduced by the net revenue earned prior to the completion of construction. The borrower enters into an operating agreement with the Corporation fixing the rentals, income ranges of eligible tenants, the establishment and use of reserves and the submission of annual financial statements. Those considered eligible for accommodation are persons with incomes in the lower third of the income level of the municipality. An in-coming tenant's family income must not exceed four times the shelter rent of the dwelling unit. A tenant's lease is automatically terminated when his family income rises above five times the shelter rent.

Projects may be designed especially for the elderly. These projects have usually been sponsored by non-profit organizations requiring no return on equity. The Corporation requires that the limited-dividend company contribute at least half of the required

10-p.c. equity. The remainder may be provided by provincial or other grants; in some provinces, provincial grants are available to non-profit organizations. The income for entry must be at least twice the shelter rent and leases terminate automatically when income exceeds five times the shelter rent that would apply with a 90-p.c. loan.

Guarantees.—Since 1955, loans to assist in financing the improvement of existing houses have been available under Sect. 24 of the National Housing Act. This Section authorizes CMHC to give a limited guarantee to banks or approved instalment credit agencies in return for an insurance fee paid by the borrower on loans made for additions, repairs and alterations to his own home. A home improvement loan and the balance owing on any existing NHA home improvement loan on the property may not exceed \$4,000 for a one-family dwelling or \$4,000 for the first unit of a duplex, semi-detached, or multiple-family dwelling, plus \$1,500 for each additional unit up to a maximum of \$8,500 for a four-unit dwelling. Loans are repayable in monthly instalments together with interest, in not more than 10 years.

Investments.—Under Sect. 36 of the National Housing Act and complementary provincial legislation, the Federal Government and the government of a province may enter into a partnership agreement to build rental housing for families of low income. The Federal Government bears 75 p.c. of the capital costs and the provincial government the remainder, although the latter may call upon the municipality concerned to bear a portion of the provincial share. Federal-provincial rental housing projects are of two types—subsidized and full-recovery. In subsidized projects, rents are related to the tenant's family income and size of family; in full-recovery projects, rents are set at a level sufficient to amortize capital costs and to recover operating expenses.

Under the same Section of the National Housing Act, the Federal Government and the government of a province may also enter into an agreement to provide for a land assembly project, which involves the development of raw land for housing purposes. After subdivision planning, installation of sewer and water lines and the construction of roads and sidewalks, serviced lots are made available for sale to prospective home owners or to builders for residential construction. The Federal Government pays 75 p.c. of the costs of such projects and the province concerned pays the remainder.

Corporation Building.—The Corporation may construct and administer housing and certain other buildings on its own account and for other government departments and agencies. Its responsibilities include the provision of architectural and engineering designs, the calling of public tenders and the administration of the construction contracts—including any necessary on-site surveys and engineering. On such contracts the Corporation carries out full architectural and engineering inspections.

Grants.—The Federal Government makes financial assistance available to municipalities for the study of existing conditions and the establishment of their needs for redevelopment and housing. Financial aid is also available when a municipality acquires land for slum clearance. The Federal Government contributes 50 p.c. of the cost of acquiring and clearing the land and the remainder is contributed by the municipality.

Research.—The Government's housing agency is concerned also with building technology in the formulation of standards for house construction, in the use of suitable materials and in the development of new building techniques. The Corporation has no laboratory facilities but has direct experience of performance in the field and seeks the advice of specialists in the various agencies and departments of the Federal Government in such matters. Research into the factors affecting housing are concerned with the measurement of the demand for new housing, the volume of new housing built and the supply of mortgage money for house construction. The Corporation also co-ordinates and publishes statistical information on housing. Supported by funds provided under the National Housing Act, the Canadian Design Council directs a program towards the improvement of housing design in Canada.

Other Federal Legislation.—The Farm Credit Act, 1959 provides for federal long-term loan assistance for housing as well as for other farm purposes (see p. 442); the Veteran's Land Act, 1942 provides a form of loan and grant assistance to veterans for housing and other purposes (see p. 338); and the Farm Improvement Loans Act, 1944 provides for guarantees for intermediate- and short-term loans made by approved lending agencies to farmers for housing and other purposes. These three statutes are concerned only incidentally with housing. The primary provisions for housing as such are those in the NHA.

Provincial Assistance.—All provinces except Prince Edward Island have complementary legislation providing for joint federal-provincial housing and land assembly projects. In addition, separate legislation with respect to housing has been enacted by several provinces.

An Act to Improve Housing Conditions, 1948, passed by the Quebec Government, provides for a subsidy on mortgage loan interest charges in excess of 3 p.c. on new dwellings. In Ontario, the Planning Amendment Act, 1952 empowers municipalities with approved official plans to designate redevelopment areas and acquire and clear land therein for designated purposes. The Rural Housing Assistance Act, 1952 authorizes the establishment of a Crown company—the Rural Housing Finance Corporation—to lend and invest mortgage money for new rural housing. The Junior Farmer Establishment Act, 1952 provides for loans to young qualified farmers for housing and other purposes. The Elderly Persons Housing Aid Act, 1952 authorizes capital grants to limited-dividend corporations in respect of housing projects for elderly persons.

Manitoba, under the Elderly Persons Housing Act and amendments, authorizes capital grants to assist limited-dividend housing companies by the payment of 20 p.c. of construction costs up to a maximum of \$1,000 for a two-person unit and \$700 for a bachelor unit. The grant may be used to purchase furnishings and fixtures for the housing units. Saskatchewan assists limited-dividend projects for the elderly under the Housing Act and amendments, with capital grants up to 20 p.c. of the total capital cost. British Columbia assists limited-dividend projects for the elderly under the Elderly Citizen's Housing Aid Act. Capital grants not exceeding one-third of the total cost of the project may be made.

Subsection 2.—Housing Activities in 1959

House-building activity in 1959 was somewhat below the level of the previous year but was the second highest on record. Starts numbered 141,345 compared with the peak of 164,632 units in 1958 but the number of dwellings completed during 1959 at 145,671 was approximately the same as the 1958 total of 146,686. Production during the year was more than enough to meet the basic need for new housing.

During the five-year period 1955-59, new housing completions averaged 134,000 units a year. The proportion of new dwellings has been increasing steadily since the end of the War; from 1946 to 1959 some 1,500,000 new dwellings have been added to the country's housing stock which now comprises more than 4,000,000 units. This addition, however does not mean that there has been enough new housing to meet all needs, since there are still many poorly housed people in Canada, but the rate of new house-building has been more than sufficient to meet the requirements arising out of growth and movement of the population—factors that absorb an estimated 125,000 housing units annually.

Much of the falling-off in starts of both single-family and multiple-family dwellings in 1959 was in those financed by private lending institutions under the National Housing Act. Some decline also occurred in starts of dwellings financed by mortgage loans from

individuals and other non-institutional lenders, or financed without recourse to mortgage loans. There was little change in the number of dwelling starts financed by direct mortgage loans from the Central Mortgage and Housing Corporation and, for the second consecutive year, such starts made up more than 20 p.c. of the total for the year. Starts of dwellings financed by conventional loans from lending institutions increased in number.

The decline in starts of dwellings financed by institutional loans under the NHA was mainly attributable to a shortage of funds for such loans. Heavier demands for funds for other purposes and rising interest rates made the NHA mortgage, with its maximum interest rate of 6 p.c., less attractive to investors as the year progressed. Thus, towards the close of the year, before the maximum NHA interest rate was raised to 6½ p.c., the approved lenders had virtually stopped making loans under the Act. Nevertheless, housing demand remained strong throughout the year. As already stated, there were almost as many dwelling starts financed under the direct lending provisions of the Act in 1959 as in 1958 and, since a good proportion of them were started in the latter part of the year, construction was active during the winter months and about 82,000 units were carried over into 1960.

¹ Based on assessment reports. ² House-building activity in the fringe areas of major urban centres is included even where these areas are outside centres of 5,000 population or over. This activity is not included, however, in the total for all centres of 5,000 population or over. ³ Excludes the Yukon and Northwest Territories.

Operations under the National Housing Act.—In 1959, for the first time, public funds exceeded private funds in mortgage loan commitments under the National Housing Act. Direct mortgage loan commitments amounted to \$343,200,000 and the value of commitments by approved lenders amounted to \$282,300,000. Though there was little change from 1958 in the volume of direct lending, a substantial decline took place in insured mortgage lending under the Act.

As stated previously, competing demands for funds for other purposes and rising interest rates were responsible for the decrease in NHA activity of approved lenders during 1959, a decrease that was felt in all regions but particularly in Ontario and Quebec. In that year approved lenders made NHA loans amounting to \$282,300,000 for 25,000 dwellings compared with commitments of \$510,000,000 for 46,000 dwellings in 1958. All types of lenders

shared in the decline. The banks made loans for 14,000 dwelling units in 1959 compared with 25,700 in the previous year, and life, trust and loan companies made loans for 11,000 dwellings compared with 20,000. It is also noteworthy that the average amount of loan on an NHA insured dwelling was slightly higher in 1959 at \$11,283 than the 1958 average of \$11,156.

In 1959, direct mortgage loans were made by the Corporation for 32,228 dwelling units compared with 36,453 in 1958. Though the difference in the number of loans approved in the two years was not great, despite the absence in the later year of rental loans other than those to limited-dividend companies, there was considerable difference in the timing of these loans. In 1958 loans were available to owners and builders throughout most of the year; in 1959 loans to owner applicants were available throughout most of the year but loans to builders were not available until September. In the first eight months of 1959, Corporation loans were down from the previous year by 39 p.c. but in the last four months there was an increase of 32 p.c. Because of the short period of availability, there was a marked decline in loans to builders for the year, but this was largely offset by a considerable increase in loans to owner applicants, particularly those in the smaller centres of fewer than 55,000 population.

Loans to Limited-Dividend Companies.—Loans were made to limited-dividend companies in 1959 to finance the construction of 4,518 low-rental dwellings in areas where conditions of shortage, overcrowding or substandard housing existed; this figure compares with loans for 6,282 limited-dividend units approved in the previous year. The accommodation in 1959 was directed towards the lower-third income level and projects were designed so that their capital costs would be consistent with low rents. More than 900 of the dwellings approved were designed for elderly persons and were sponsored mainly by non-profit companies.

Borrower and House Characteristics.—The average new owner of a 1959 house financed under the NHA was slightly more than 34 years of age and had either one or two children. His income was \$5,716 a year, compared with \$5,657 for the average new owner in 1958, and the house he bought cost \$14,516 with an additional amount of \$228 for the mortgage insurance fee. The new owner made a down-payment of \$3,000 and committed himself to payments of \$96 a month for mortgage, principal, interest and taxes, which amount represented 20.1 p.c. of his income. These were the figures for the average new owner but there were substantial differences between different groups of owners. Borrowers who financed their houses with Small Home Loans had incomes nearly \$900 a year less than those who financed their houses under the insured loan program. Under the Small Home Loans program, the houses cost \$2,156 less than those financed by insured loans, and the down-payment was \$1,268 less.

More than 80 p.c. of the houses financed under the Act in 1959 were three-bedroom bungalows and split-level houses made up most of the remainder; two-storey and one-and-a-half-storey houses represented only 2 p.c. of the total. There was little change from the previous year in the average size of dwelling—1,108 sq. feet in 1959 compared with 1,118 sq. feet in 1958. Dwellings financed under the Small Home Loans program averaged 1,046 sq. feet, other Corporation-financed dwellings 1,089 sq. feet, and dwellings financed by the approved lenders averaged 1,165 sq. feet.

On the other hand, there was some increase in 1959 in the costs of dwellings financed under the Act. Land costs were up about 3 p.c., raising the cost of the average lot to \$2,533 compared with \$2,471 in 1958. Construction costs per sq. foot increased by 2 p.c. to \$10.79. With little change in size, these increases raised the average cost of dwellings to \$13,987 under the Small Home Loans program and to \$15,896 for dwellings financed by the approved lenders. An additional \$228 was required for the mortgage insurance fee.

Home Improvement Loans.—Lending under the Home Improvement provisions of the NHA was again substantial as the Federal Government continued to encourage owners to make improvements to their homes during the winter months. Nearly 33,000 loans, amounting to \$37,500,000, were made during 1959 as compared with 34,000 loans amounting to \$36,000,000 made during 1958.

Urban Improvement.—Grants were approved in 1959 to assist three municipalities—Halifax, Toronto and Windsor—in the redevelopment of blighted areas. The contributions of the Federal Government, which amount to one-half the cost of acquiring and clearing the area, totalled \$5,000,000. Grants were also made to ten municipalities to assist in carrying out urban renewal studies, which usually precede redevelopment programs.

Federal-Provincial Projects.—Nine public housing projects were approved under the federal-provincial partnership arrangement of the Act during 1959. These projects will provide 772 low-rental apartments in nine Canadian municipalities; the Federal Government will advance 75 p.c. of the capital cost of each project and the province concerned will bear the remainder. Under similar partnership arrangements, whereby land may be obtained for residential use, 1,775 lots were sold during 1959, raising to a total of 7,936 the number serviced and sold out of some 14,800 authorized for development.

Housing Research and Community Planning.—The Corporation, in the course of its work, engages in housing research. In addition, it has a specific responsibility under the Act to carry out or arrange for studies and investigations by other institutions or agencies which will lead to the improvement of housing and community planning. In 1959 expenditures for these activities amounted to \$1,100,000, of which more than one-third was spent outside the Corporation.

Arrangements were continued during 1959 with Canadian universities for the advancement of training in community planning. Federal grants provide for fellowships and bursaries for postgraduate and research work in housing, planning and urban development and for assistance to the four universities having faculties for these studies. A grant was approved to assist a country-wide inquiry undertaken by the Royal Architectural Institute of Canada into the design of residential areas. The Corporation also continued to give financial assistance to the Community Planning Association of Canada, a voluntary society incorporated to promote nation-wide recognition of the importance of orderly community and regional development.

CHAPTER XVI.—SURVEY OF PRODUCTION*

CONSPECTUS

	PAGE		PAGE
SECTION 1. DESCRIPTION OF THE COMMODITY PRODUCTION SERIES.....	739	SECTION 2. TRENDS IN COMMODITY PRODUCTION.....	740

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Description of the Commodity Production Series

The scope of the Survey of Production is limited to industries engaged chiefly in the production of commodities, the term "production" applying to such processes as the growing of crops, the mining of metals and other minerals, the catching of fish, the conversion of falling water into electric energy, the construction of buildings and the manufacturing and processing of goods. The activities of the transportation, communications, trade, finance and service industries are excluded, except as certain of their costs are indirectly reflected in the value of output of commodity-producing industries. This is in contrast to the scope of the widely used Gross National Product series (see Chapter XXIII) which encompasses all industries.

The "net" value of production, or "value added", is generally considered the most significant measure of production, since in assessing the contribution of each industry to the total it is essential that inter-industry duplication be eliminated. Value added is computed by deducting from the total value of output (excluding indirect taxes) for each industry, the cost of materials, fuels, purchased electricity and process supplies consumed in the production process.

The measurement of value added is similar to although not strictly comparable with the concept involved in the contribution of each industry to the gross domestic product at factor cost (net income originating plus depreciation). The main difference is that value added, as computed for each commodity-producing industry, includes the cost of such services as insurance, advertising, communications, etc., which originate in the non-commodity-producing industries. In national income accounting, the contribution of these services to gross national product is classified with the non-commodity-producing group. For instance, the cost of insurance incurred by manufacturers is included in the net value of the manufacturing industry in the Survey of Production series but is not included in the contribution of manufacturing to the gross national product. Thus the measurement of the value of output based on value added contains a certain amount of duplication and the figures for the industrial groups are always higher than those given in the National Accounts series.

One of the major advantages of the commodity-production series is that the statistics may be classified by provinces. With the exception of personal income and its major components, the geographical distribution of gross national product is not available mainly because profits cannot be allocated according to the provinces in which they are generated by productive activity. A more detailed explanation of the series and the conceptual and classification differences as compared with the Gross National Income series is given in DBS Bulletin *Survey of Production 1926-1956* (Catalogue No. 61-202).

* Prepared in the National Income Section, Research and Development Division, Dominion Bureau of Statistics.

Section 2.—Trends in Commodity Production

The decade 1947 to 1957 was a period of tremendous growth in commodity production in Canada. The total net value of output all but doubled from 1947 to 1955 and increased another 13.0 p.c. by 1957. Among the primary industries, mining showed the greatest absolute increase, advancing from \$402,538,000 to \$1,308,518,016 or by 225.1 p.c. Electric power followed, rising 172 p.c. in the same comparison and reflecting the increase in installed generating capacity during the period. However, the great activity experienced by the construction industry all across the country during these years resulted in that industry showing the largest proportionate gain of all the major commodity-producing industries in the 1947-57 comparison; its net value of output rose by 285.6 p.c. from \$963,100,000 to \$3,713,372,000. Manufactures also advanced steadily throughout the period, reaching a total 129 p.c. above that of 1947.

The shift in relative importance of primary and secondary production during the 1947-57 period is noteworthy. In the earlier year primary production represented 34 p.c. of the total net value of Canadian production and secondary output 66 p.c.; by 1957 the proportions were 24 p.c. and 76 p.c., respectively. Internally, agriculture's share of total net value dropped from 20 p.c. to 9 p.c. over the ten-year period and the relative importance of construction increased from 12 p.c. to 21 p.c. The contribution of manufacturing to total net value of production remained fairly steady at from 53 to 55 p.c.

1.—Net Value of Production and Percentage Analysis, by Industry, 1947, 1950, 1953 and 1955-57

NOTE.—Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and supplies consumed in the production process. Data for fisheries and trapping represent total value.

¹ Excludes agriculture in Newfoundland.

² Excludes farm woodlots.

³ Method of compilation changed in 1956. Net value of production for electric power on the old basis was \$613,773,000 in 1956.

Although all provinces and territories contributed to the increase in net value of production over the 1947-57 decade, there was considerable variation in their rates of advance. Ontario, with a record net value of output amounting to \$7,541,109,610 in 1957, recorded by far the largest absolute increase over 1947, followed in order by Quebec, British Columbia and Alberta. However, the percentage increase of 153.9 shown by Alberta was higher than that of Ontario at 138.4, and the percentage increase shown by British Columbia at 128.9 was higher than that of Quebec at 121.7. The relative contributions of the provinces to the total net value showed little change over the decade. Ontario's share increased from 40 p.c. to 42 p.c., Alberta and British Columbia showed marginal increases and the contributions of the other provinces remained almost unchanged.

It is also interesting to note the consistencies and shifts in the contributions of the different provinces to the net value for certain industries. Over the 1947-57 period, and indeed over the past two or three decades, the provincial contributions to the over-all value of manufacturing has remained quite stable. Approximately 80 p.c. of the net value of manufacturing normally has originated in Ontario and Quebec and, when British Columbia is added, about 90 p.c. of the net value of manufacturing is covered. In mining, the historical record shows that both Ontario and British Columbia have been losing their prominence to Alberta and Quebec. Saskatchewan has also recorded sharp relative growth in mining over the past two decades. Since 1953 Alberta has contributed more to the net value of mining than any other province, whereas before 1953 Ontario was in the lead. Actually the drop in the prominence of Ontario has been very sharp since 1935 when that province contributed 50 p.c. of mining net value compared with only 23 p.c. in 1957.

In forestry, British Columbia and Alberta have been making larger relative contributions to the total net value in recent years at the expense of Quebec and, to a lesser extent, of Ontario. Provincial contributions to agriculture, while very erratic from year to year, have not changed significantly over the past few decades. Perhaps the most striking fact about agriculture is the extent of the variations in net value originating by province. Saskatchewan is particularly affected by the success or failure of grain crops.

¹ Excludes agriculture, with British Columbia.

² Construction figures for the Yukon and Northwest Territories are included

The chart on p. 743, calculated by using the formula for compound interest and the years 1947 and 1957 only, shows graphically the compounded average annual rates of growth for industries and for provinces for the decade 1947-57. According to this calculation, the average annual rate of growth in the total net value of commodity production was just over 8 p.c. Construction, indicative of heavy new investment expenditures, reflected the sharpest growth rate (+15 p.c.), while trapping (-4 p.c.) was the only industry to decline over the period. Agriculture showed no change. Mining, reflecting the substantial increases in petroleum, natural gas, uranium and iron ore production, had an average rate of growth of nearly 13 p.c. Electric power and manufactures also showed rates of growth that exceeded the total whereas fisheries and forestry were below the average. The compounded annual rates of growth of the provinces varied between 4 p.c. and 10 p.c. over the decade. Alberta, reflecting the effects of the sharp expansion in oil and gas production, had the highest rate of growth (10 p.c.), and Saskatchewan's rate was the lowest, indicating the province's dependence on the fortunes of agriculture. Over the decade, the annual rates for Ontario, Quebec and British Columbia ranged between 8 and 9 p.c. New Brunswick, Manitoba, Prince Edward Island and Nova Scotia recorded rates of growth between 4 p.c. and 7 p.c.

Developments in 1957 Compared with 1956.—The net value of Canadian commodity production reached the record total of \$17,825,000,000 in 1957, only slightly above the 1956 total of \$17,702,000,000. There were both gains and losses among the industries. Construction increased by 11 p.c., mining and electric power each by 7 p.c. and manufacturing by 2 p.c. Agriculture showed the sharpest of the losses, its net value of output being down more than 23 p.c. Forestry decreased by 13 p.c., and fisheries and trapping each by 11 p.c.

Commodity production in the different provinces in 1957 is analysed in the following paragraphs.

Newfoundland.—The net value of commodity production in Newfoundland, exclusive of agriculture, amounted to \$193,000,000 in 1957, constituting just over 1 p.c. of the Canadian total. This amount represented a decline of 9 p.c. from the 1956 value level, a decline apparent in all industries except electric power. Manufacturing, the principal commodity-producing industry in Newfoundland, accounts for approximately 30 p.c. of commodity net value. Other major industries, in order of relative importance, are construction, mining, forestry, and fishing; recently mining has been increasing its share of the provincial total largely as a result of the Labrador iron ore output.

COMPOUNDED ANNUAL RATE OF GROWTH⁽¹⁾ IN NET VALUE OF COMMODITY PRODUCTION 1947-57

(1) CALCULATED USING THE FORMULA FOR COMPOUND INTEREST AND THE YEARS 1947 AND 1957 ONLY.

Prince Edward Island.—The economy of this province is largely agricultural—farm production accounted for 39 p.c. of the total net value of commodity production in 1957, construction for 28 p.c. and manufacturing for 19 p.c. The total, which amounted to \$35,000,000 was down about 10 p.c. from the level of the previous year.

Nova Scotia.—The net value of commodity production in Nova Scotia in 1957 increased 4 p.c. over 1956 to reach \$396,000,000. Of this amount, manufacturing accounted for 44 p.c. and construction, second in importance, for 22 p.c. Mining continued to rank as Nova Scotia's main primary industry, contributing over 13 p.c. of the total net value of output, and agriculture and fisheries each accounted for 6 p.c. The net value of commodity output of the province constitutes about 2 p.c. of the Canadian total.

New Brunswick.—In 1957, the net value of commodity production in New Brunswick amounted to \$297,000,000, a drop of 7 p.c. from the preceding year. The province's share of the Canadian total was 1.6 p.c. Manufacturing is the principal activity and accounted for nearly 42 p.c. of the total net value in 1957; construction, the relative importance of which has been increasing in recent years, accounted for 26 p.c. Forestry, the principal primary industry, contributed 11 p.c. of the total in 1957 and agriculture 10 p.c.

Quebec.—Quebec's net value of production was 2 p.c. higher in 1957 than in 1956, increasing from \$4,543,000,000 to \$4,629,000,000. The province's share of the Canadian total was 26 p.c. Manufacturing leads all industries in Quebec, accounting in 1957 for nearly 64 p.c. of the province's net value of output. Construction contributed 18 p.c. while agriculture and mining, the main primary industries, each accounted for 5 p.c.

Ontario.—The net value of commodity production in Ontario advanced nearly 7 p.c. from \$7,070,000,000 in 1956 to \$7,541,000,000 in 1957, the latter being 42 p.c. of the Canadian total for that year. The economy of Ontario, like that of Quebec, is largely dominated by manufacturing which has contributed between 67 p.c. and 69 p.c. of the provincial net value of commodity output in recent years. The net value of construction accounted for more than 17 p.c. of the provincial total in 1957 and agriculture, the next in importance, accounted for 7 p.c.

Manitoba.—Manitoba's net value of commodity production declined from \$687,000,000 in 1956 to \$637,000,000 in 1957, a drop of over 7 p.c., mainly as a result of lower value of agricultural output. Manufacturing, which has been the province's principal activity since 1953, accounted for 43 p.c. of 1957 net value. Construction has increased in importance in recent years and accounted for 26 p.c. of the total in 1957. Agriculture's share of the province's net value of output was 20 p.c. in 1957 compared with 27 p.c. in 1956.

Saskatchewan.—The economy of Saskatchewan is largely dependent on agriculture and particularly on wheat production. Thus the reduced yield of 1957 brought a sharp decline in the value of the province's commodity output. The total was \$760,000,000, 26 p.c. below the 1956 level, with the result that Saskatchewan's contribution to the Canadian total declined to 4 p.c. from 6 p.c. in 1956. The agriculture industry accounted for 39 p.c. of the province's net value of output in 1957 compared with 59 p.c. in the previous year. Construction and manufacturing contributed 26 p.c. and 14 p.c., respectively, in 1957 and mining, with a contribution of 17 p.c., increased its share of the provincial output from 7 p.c. in 1956.

Alberta.—The net value of commodity production in Alberta amounted to \$1,438,000,000 in 1957, down 5 p.c. from the 1956 total of \$1,512,000,000. The province's contribution to the Canadian total was 8 p.c. in 1957. Agriculture in Alberta has declined in relative importance in recent years, and accounted for only 19 p.c. of the provincial total in 1957 as compared with nearly 26 p.c. in 1956. Construction, mining and manufacturing industries, on the other hand, have all increased; they contributed 29 p.c., 26 p.c. and 22 p.c., respectively, to the provincial total in 1957 compared with 26 p.c., 25 p.c. and 19 p.c., respectively, in the immediately preceding year.

British Columbia.—British Columbia's net value of production dropped slightly to \$1,867,000,000 in 1957. The province contributed 10.5 p.c. of the Canadian aggregate, ranking third among the provinces. Manufacturing is the leading industry and accounted for 41 p.c. of the province's total net value of commodity output. Construction, which has increased in relative importance in recent years, contributed 31 p.c., forestry nearly 14 p.c. and mining 5 p.c.

¹ Included with British Columbia.

Per Capita Value of Commodity Production.—Per capita net value of commodity output in Canada in 1957, at \$1,090, was slightly lower than in 1956. In three provinces the per capita output was higher than the Canadian average; Ontario ranked first with \$1,341, British Columbia second with \$1,250 and Alberta third with \$1,240. Per capita net value of output in the Maritime Provinces was less than half the Canadian average, and Quebec's per capita production was 11 p.c. below the national figure. Saskatchewan, where value of output fluctuates widely with crop conditions, was 21 p.c. below the Canadian average in 1957.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—The Government in Relation to Labour

Subsection 1.—Federal Labour Legislation

The federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

The statutory duty of disseminating information concerning labour and industrial matters is set out in the Department of Labour Act passed in 1909. In addition, the Minister is responsible for the administration of the following statutes: Conciliation and Labour Act (1906); Government Annuities Act (1908)†; Government Employees Compensation Act (1918); Fair Wages and Hours of Labour Act (1935); Unemployment Insurance Act (1940); Vocational Training Co-ordination Act (1942); Reinstatement in Civil Employment Act (1946); Merchant Seamen Compensation Act (1946); Industrial Relations and Disputes Investigation Act (1948); Canada Fair Employment Practices Act (1953); Female Employees Equal Pay Act (1956); and the Annual Vacations Act (1958).

Fair Wages Policy.—The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act and Order in Council P.C. 2029 of Dec. 22, 1954. Hours of work on construction contracts are limited to eight per day and 44 per week, except in an emergency or in exceptional circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour.

* Except as otherwise noted, this Chapter has been revised under the direction of A. H. Brown, Deputy Minister, Department of Labour, Ottawa.

† Statistics and details of administration under this Act are given at pp. 312-313.

Wages and hours of work on contracts for equipment and supplies are also regulated by Order in Council P.C. 2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. This Order in Council contains a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

*Government Prevailing Rate Employees.**—Many departments and agencies of government employ non-office workers in public buildings, defence establishments, parks and forests, experimental farms, canal operation, airports and government vessels, survey parties, special projects, etc. Such positions are exempt from the operations of the Civil Service Act and rates of pay are fixed by the Treasury Board in consultation with the Department of Labour on the basis of prevailing private industry rates for comparable work in the employment area. Data used in the determination of these pay rates are secured from wage surveys made by Industrial Relations Officers of the Department of Labour and wage research conducted by the Economics and Research Branch as well as from collective agreements and information supplied by some provincial Departments of Labour.

The Fair Wages and Prevailing Rates Division of the Industrial Relations Branch also recommends rates of pay for 3,700 commissionaires employed by various government departments and agencies throughout Canada, provides wage data to assist certain Crown corporations in the preparation of their wage schedules, and gives assistance in the establishment of class titles, job descriptions and the application of job evaluation techniques.

Three sets of comprehensive Regulations have been established by the Treasury Board governing the hours of work, overtime, vacations, statutory holidays, sick leave, pensions, etc., for (1) prevailing rate workers generally employed, (2) ships' officers and (3) ships' crews.

The Industrial Relations and Disputes Investigation Act.—This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act, which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain

* Statistics on numbers and earnings of prevailing rate and other groups of federal employees exempt from the Civil Service Act are given at pp. 148-156.

provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions that must be observed prior to strike and lockout action are provided for in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, from Sept. 1, 1948 to Dec. 31, 1959 the Canada Labour Relations Board received 1,104 applications for certification, 652 of which were granted, 217 rejected, 218 withdrawn and 17 were pending at the end of the period. Of the 681 industrial disputes dealt with under the conciliation provisions of the Act, 594 were settled by conciliation officers and conciliation boards, 51 were not settled, 13 lapsed and 21 were pending at Dec. 31, 1959.

Labour-Management Co-operation Service.—During World War II, production committees based on the principle of joint consultation between labour and management were established in many vital industries. Since 1947 the establishment of labour-management production committees in industry has been encouraged and assisted by the Labour-Management Co-operation Service, a division of the Industrial Relations Branch of the Department of Labour. The number of active committees has grown from 526 in 1947 to approximately 1,552 at Dec. 31, 1959. Their activities are directed towards such objects as better understanding between management and labour, improved production efficiency, improved quality, reduction of waste, accident prevention, good housekeeping, and reduction of absenteeism.

Reinstatement in Civil Employment Act.—This Act provides for the reinstatement in their civil employment of discharged members of the Armed Forces and other designated persons. It was originally passed in 1942 and revised in 1946 and is administered by the Minister of Labour through the Unemployment Insurance Commission. In 1954, by the Veterans Benefit Act, the Act was made applicable to certain ex-members of the Special Force and to former members of the regular Forces who had served for a period not exceeding three years after July 5, 1950 and whose enlistment occurred prior to July 1, 1955.

Canada Fair Employment Practices Act.—This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction—those covered by the Industrial Relations and Disputes Investigation Act (see p. 749). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies which practise discrimination; and of advertisements or inquiries in connection with employment which express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Female Employees Equal Pay Act.—This Act came into effect on Oct. 1, 1956, and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an

employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

Annual Vacations Act.—This Act was passed in January 1958 and became effective by proclamation on Oct. 1, 1958. It provides a one-week vacation with pay for the first year of employment and a two-week vacation for subsequent years. Vacation pay is computed at 2 p.c. of wages, as defined in the Act, for a vacation of one week and 4 p.c. for a vacation of two weeks.

Subsection 2.—Provincial Labour Legislation

Because of the authority given by the British North America Act to provincial legislatures to make laws in relation to local works and undertakings, and in relation to property and civil rights, there is a large body of provincial labour legislation dealing with relations between employers and employees and the trade unions representing employees, working conditions, qualifications of tradesmen, compensation for work accidents, and other matters. In each province a Department of Labour is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a board appointed by the Lieutenant-Governor in Council.

Factory legislation and shops legislation in several of the provinces prohibit child labour, regulate the hours of work of women and young persons, and contain provisions to ensure the safety and protect the health of employees in industrial and commercial establishments. All provinces have minimum wage legislation, and most have legislation establishing maximum working hours in at least some types of employment. The industrial standards legislation in Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta enables the wages and hours of work agreed upon at a conference of representatives of employers and employees in designated trades to be made the minimum standards throughout the trade concerned. The Quebec Collective Agreement Act permits certain terms of collective agreements between employers and trade unions to be made binding on all in the industry.

In all provinces there is legislation to protect freedom of association, to promote collective bargaining and to assist in the settlement of industrial disputes. Nine provinces have legislation dealing with apprenticeship and all have legislation providing for the licensing of certain classes of workmen. Seven provinces have equal pay laws, and six have fair employment practices Acts prohibiting discrimination in hiring and conditions of employment and in trade union membership on grounds of race, colour, religion or national origin. All have workmen's compensation laws.

Provincial labour legislation enacted in 1959 is outlined in the following paragraphs.

Newfoundland.—The *Labour Relations (Amendment) Act* empowers the Lieutenant-Governor in Council to dissolve any trade union in the province which is a branch, local or affiliate of a trade union or organization of trade unions outside the province, if it appears to the Lieutenant-Governor in Council that a substantial number of the superior officers, agents or representatives of such union outside Newfoundland have been convicted of any heinous crime, and any or all of them retain offices in the union organization. Where a trade union is dissolved, any collective agreement to which it is a party becomes void and, if it is a certified bargaining agent, its certification is revoked.

The Labour Relations Board is given authority to revoke a union's certification on the following conditions: (1) if any union officer or representative continues in his position after being convicted of an offence against the Criminal Code in connection with a trade dispute or an offence under the Act; (2) if the union itself has been convicted of a breach of the Act; (3) where an employer has been excluded from Sect. 12 (the provision requiring either party to bargain on notice from the other); (4) if an injunction other than an interim injunction has been granted against a union officer, agent, representative or member in

connection with a trade dispute; (5) if a judgment has been given against a union or any of its officers, members, agents or representatives in respect of a tortious act. The Lieutenant-Governor in Council may also revoke a union's certification after due inquiry, in which case the Board is precluded from entertaining a new application for certification without the consent of the Lieutenant-Governor in Council and any collective agreement held by a decertified union is void from the date of revocation of its certificate.

New provisions prohibit strikes and picketing for certain purposes. For a contravention of these new provisions, the penalty is a maximum fine of \$5,000 for a union and \$500 or three months' imprisonment for an individual.

The Act also makes a trade union suable in an action for damages for tortious acts alleged to have been committed by or on behalf of the union, and legally responsible for any act or thing done by a union member or officer.

The *Trade Union (Emergency Provisions) Act* revoked the certification of two locals of the International Woodworkers of America, declared void any collective agreement in force between these locals and employers and prohibited the re-certification of these two locals without the consent of the Lieutenant-Governor in Council.

The *Boiler and Pressure Vessel Act* was amended to provide for the establishment of a Board of Examiners to examine candidates for engineers' or firemen's certificates and for the setting up of a tripartite advisory committee to hear appeals and to advise the Minister with respect to the administration of the Act. Provision is made for the issuance of welders' certificates of proficiency.

Prince Edward Island.—A *Women's Minimum Wage Act* was passed, providing for the fixing of minimum rates by the Labour Relations Board established under the Trade Union Act, subject to the approval of the Lieutenant-Governor in Council. The Act covers all female employees except farm workers and domestic servants but the Board may exempt other employees from the operation of the Act or of any minimum wage order.

An *Equal Pay Act* was enacted prohibiting employers from discriminating between male and female employees by paying a female employee at a lower rate than a male employee for the same work done in the same establishment. A complaint that the Act has been violated may be made to the Labour Relations Board.

An amendment to the *Trade Union Act* provides for the establishment of a tripartite Labour Relations Board. The Board will deal with certification of unions as bargaining agents and perform such other functions as the Lieutenant-Governor in Council may designate.

An amendment to the *Workmen's Compensation Act* raises the lump sum payment to a widow from \$100 to \$200.

Nova Scotia.—The *Fair Employment Practices Act*, formerly restricted to employers with five or more employees, was amended to apply to any employer who employs one or more persons.

An amendment to the *Workmen's Compensation Act* increased the rate of compensation for disability from 70 to 75 p.c. of earnings and established the maximum earnings base at \$3,600. The minimum weekly payment for temporary total disability was increased to \$20 or earnings if less. In fatal cases, the allowance for funeral expenses was raised from \$200 to \$250, the lump sum payment to a widow from \$110 to \$150, the widow's monthly allowance from \$50 to \$60, and the monthly allowance for a dependent child from \$20 to \$22.50. The increased benefits to widows and children are made applicable to existing pensioners as well as to new awards. Coal miners' pneumoconiosis is added to the schedule of industrial diseases and compensation made payable under substantially the same conditions as for silicosis. The Workmen's Compensation Board is authorized to make regulations providing for periodic X-ray examination of workmen exposed to silica dust or coal dust and for the issuance of certificates of fitness following such examination. Other amendments provide greater protection for workmen in the fishing and dredging industry where an employer is individually liable for the payment of compensation,

raising the maximum liability with respect to claims related to one vessel from \$50,000 to \$200,000 and removing the former \$1,200 limit on the earnings of sharesmen deemed to be wages for compensation purposes.

New Brunswick.—An amendment to the *Workmen's Compensation Act* increased the monthly allowance for a child to \$20 and for an orphan to \$40. The amount allowed for funeral expenses was raised from \$200 to \$300. The minimum payment for temporary disability was increased from \$15 to \$25 a week, or earnings if less. All increases came into force on Jan. 1, 1960.

The *Labour Regulations Act* was amended to cover municipal employees except those specifically excluded by resolution of a municipality.

A new *Stationary Engineers Act* was passed which, among other changes, provides for the issue of "learner" type operator permits for a period of up to six months, requires the annual inspection of insured boilers and pressure vessels, lays down the qualifications required for inspectors' certificates of competency, sets out more explicitly than formerly the powers of inspectors, and requires the reporting of accidents.

Quebec.—The *Trade-Schools Act* was replaced by the *Private Vocational Schools Act* which provides for closer government supervision of private schools giving vocational training.

The *Workmen's Compensation Act* was amended to raise from \$4,000 to \$5,000 the maximum annual earnings on which compensation may be based, and also raised the benefits payable to dependants in fatal cases. The monthly allowance to a widow was increased from \$55 to \$75, for a dependent child from \$20 to \$25, and for an orphan child from \$30 to \$35. The allowance for funeral expenses was raised from \$200 to \$400, and the lump sum payment to a widow from \$200 to \$300. Benefits to dependants are made applicable also to persons receiving allowances by reason of past accidents. The increased rates took effect Jan. 1, 1960.

Ontario.—The *Mining Act* was amended to impose additional safety requirements in connection with such matters as blasting operations and control of vehicle traffic underground and to provide for the establishment of compulsory standards for conveyor belts.

The *Trade Schools Regulation Act* was amended to authorize more supervision of private vocational or trade schools, particularly with regard to registration practices, and the safety of school premises and equipment.

Manitoba.—The *Vacations with Pay Act*, which had provided for a one-week vacation with pay after one year of service with an employer and a two-week vacation after three years of service, was amended to provide for a vacation of two weeks with pay after one year of service.

An amendment to the *Labour Relations Act* gives a trade union the right to prosecute in its own name for an offence under the Act.

The *Workmen's Compensation Act* was substantially amended, increasing the ceiling on annual earnings from \$3,500 to \$4,500 and raising the minimum weekly payment for temporary total and permanent total disability from \$15 to \$25, or earnings if less, and reducing the "waiting period" to one day. The lump sum payable to a widow was increased from \$200 to \$300 and the monthly pension from \$65 to \$75. The allowance for a dependent child was raised from \$25 to \$35 and for an orphan from \$35 to \$45. Increases in compensation to widows and children were made applicable to existing as well as new pensions. The coverage of the Act was also extended.

Saskatchewan.—The *Queen's Bench Act* was amended to abolish *ex parte* injunctions in connection with labour disputes.

The *Fair Employment Practices Act* was amended to strengthen the provisions regarding advertisements, application forms and inquiries in connection with employment. They now prohibit not only any direct or indirect expression of discrimination but also any expression of intent to discriminate on grounds of race, religion, colour or national origin. The

amendment further provides that no person may include in an application form, advertisement or inquiry a question or request for particulars as to an applicant's race, religion, colour or national origin unless the question or request is based upon a *bona fide* occupational qualification.

The *Annual Holidays Act*, which provided for a two-week vacation after one year of service with one employer and three weeks after five years, was amended to extend the benefits of a three-week vacation to persons whose employment with the same employer has not been continuous. A new provision states that an employee is entitled to a three-week vacation with pay after five "accumulated" years of employment, provided that no break in his service has exceeded six months (182 days).

The *Workmen's Compensation Act* was amended to increase the lump sum payable to a widow from \$250 to \$300 and to provide for the payment of a sum not exceeding \$50 for a burial plot, and for the payment of a lump sum not exceeding \$50, at the discretion of the Workmen's Compensation Board, to each orphan child under 16 to meet expenses arising from the death of the parent. The minimum weekly payment for permanent and temporary total disability was increased from \$25 to \$30, or earnings if less. All increases in compensation are effective from July 1, 1959. The conditions laid down for the payment of compensation for silicosis were relaxed so that the period of exposure necessary to qualify for benefits is now three years instead of five.

Alberta.—The *Master and Servants Act* was amended to improve the procedure for collection of wages pursuant to a court order.

The *Apprenticeship Act* was amended to prohibit any employment in a designated trade by a person eligible to be an apprentice (apart from employment under apprenticeship contract) except with the permission of the Board.

Legislation was enacted dividing the Department of Industries and Labour into two separate Departments, each with its own Minister.

British Columbia.—The *Trade-unions Act* replaced legislation of the same title. Both trade unions and employers' organizations are declared legal entities for purposes of prosecuting and being prosecuted for offences against the Labour Relations Act and for purposes of suing and being sued under the Trade-unions Act. An employers' organization, a trade union or other person who fails to comply with the Labour Relations Act or the Trade-unions Act is declared to be liable in damages to anyone injured thereby, and the act of any member of an employers' association or trade union is presumed, unless otherwise shown, to be authorized by the employers' organization or trade union. The new Act also sets out the circumstances in which picketing and other forms of persuasion may legally be carried on, limiting it to legal strikes and to lockouts, and to premises where an actual dispute is in progress, further providing that it may be carried on only by the union whose members are on strike or locked out. All other picketing or other forms of persuasion directed against an employer are contrary to the Act.

The Act also prohibits the use of *ex parte* injunctions to restrain a union or other person from any act relating to a legal strike or lockout except where necessary to safeguard public order or to prevent substantial or irreparable damage to property, in which case such an injunction may be granted for a period of not more than four days. Another provision removes trade unions from the law of civil conspiracy, stating that no act done by two or more members of a trade union is actionable, if done in contemplation or furtherance of a labour dispute, unless the act would be wrongful if done without any agreement or combination.

An amendment to the *Constitution Act*, to be brought into effect by proclamation, prohibits all picketing designed to persuade anyone temporarily to withdraw his services from the provincial government or any of its departments or, with certain exceptions, from any Board or Commission appointed by an Act of the Legislature or by the Lieutenant-Governor in Council. Picketing designed to persuade a provincial civil servant from doing anything or to refrain from doing anything in contravention of his oath of office or of the statute from which his duties devolve is also prohibited.

Extensive changes were made in the *Workmen's Compensation Act*. The ceiling on annual earnings for compensation purposes was raised from \$4,000 to \$5,000 and the waiting period reduced to three days. In fatal cases, the lump sum payment to a widow was increased from \$100 to \$250 and the monthly pension from \$75 to \$90. The monthly allowance for a child was raised from \$25 to \$35 and that for an orphan from \$30 to \$40. The new rates for dependants are applicable to existing pensioners. The definition of "silicosis" was also revised to make conditions for the establishment of a claim for compensation for the disease less stringent. The coverage of the Act was extended.

Amendments to the *Boiler and Pressure-vessel Act* prohibit the installation or alteration of a low-pressure boiler plant without a permit and change the duties which a boiler operator Class A is qualified to perform.

Regulation of Wages and Hours of Labour under Industrial Standards Legislation and the Quebec Collective Agreement Act.—The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan and the Labour Act of Alberta provide that wages and hours agreed upon at a conference of representatives of employers and employees, called by the Minister of Labour or his representative, may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth and Sydney.

In *Nova Scotia*, 13 schedules of hours and wages for individual building trades were in force during the year ended Mar. 31, 1958.

In *New Brunswick*, four schedules for individual building trades were in force during the year ended Mar. 31, 1958.

In *Quebec*, under the Collective Agreement Act, hours and wages and also apprenticeship, vacations with pay and family allowances provisions, established by a collective agreement voluntarily entered into by employers and unions or groups of employees, may be made legally binding by Order in Council on all employers and employees in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1958, 102 agreements covering 262,867 workers and 28,056 employers had been generalized to apply either throughout the province or to a certain district. The agreements in force throughout the province apply to the following industries: building materials, the manufacture of women's cloaks and suits, dresses, millinery, ladies' handbags, men's and boys' clothing, men's and boys' hats and caps, men's and boys' shirts, fine gloves and work gloves, shoes, furniture, paint, corrugated and uncorrugated paper boxes, the tanning industry, the elevator construction industry, and the casket manufacturing industry. Other agreements concern industries in particular cities or parts of the province including all building trades and printing trades in large urban centres and many rural districts.

In *Ontario*, there were 128 wages and hours schedules in force at Mar. 31, 1958. Throughout the province schedules were in effect for the ladies' cloak and suit industry, the men's and boys' clothing industry, men's and boys' hats and caps, the millinery industry and the hard furniture industry. In the construction industry, 53 schedules, each for a

single trade in a single locality, covered one or more trades in 26 zones. Four schedules were in effect for certain zones in the retail gasoline service industry, and barbers had schedules in 64 zones.

In *Manitoba*, the Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking except agriculture. Orders in Council under this legislation have been passed fixing wages and hours in the barbering and hair-dressing trades. A schedule for the construction industry applies to private construction work in the larger centres of population as well as to public construction work throughout the province.

In *Saskatchewan*, 22 schedules were in effect at Mar. 31, 1958. The schedule for barbers covered the whole province; others applied to bakers and bakery salesmen, carpenters, electrical workers, painters, shoe repairers and beauty culture operators in one or more areas.

In *Alberta*, 28 schedules were in effect during 1958. These governed, in one or more areas, bakers and bakery salesmen, certain individual building trades, dairy employees, garage and service-station workers, radio service, laundry and dry-cleaning employees and barbers.

Regulation of Hours and Annual Holidays.—Five provinces—Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—have statutes that either place absolute limits on working hours or require time and one-half the regular rate to be paid if work is continued after specified limits. There is, in addition, an Act of limited application in Quebec. In the provinces that have no special hours-of-work legislation, the only statutory regulation of hours, apart from that described on p. 755 under the Industrial Standards Acts and the Quebec Collective Agreement Act, is that imposed by factories Acts, mines Acts and, in Newfoundland, an Act governing shops. In New Brunswick and Quebec the limits imposed by the factories Acts apply only to women and boys under 18 years of age. Several minimum wage Acts give authority for the regulation of hours as well as of wages.

In Ontario there is a maximum eight-hour day and 48-hour week with certain exceptions. In Alberta the maximum daily and weekly hours in the cities of Calgary, Edmonton, Lethbridge and Medicine Hat are eight and 44; in the remainder of the province they are eight and 48. In British Columbia hours are limited to eight in a day and 44 in a week. In these three provinces the Acts apply to most workers except farm labourers and domestic servants. In Saskatchewan the Act requires time and one-half to be paid for work after eight hours daily and 44 hours weekly and applies to workers in all industries except agriculture and domestic service. A Manitoba Act covering most industrial workers in the province requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men and 44 hours for women. In all provinces that have Acts regulating hours, longer hours may be worked in an emergency or by permission of the administrative authority.

Seven provinces—Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—have legislation in effect providing for annual holidays with pay for workers in most industries, and New Brunswick has legislation requiring annual holidays in the mining and construction industries and for fish, fruit and vegetable packers. In all these provinces, except British Columbia, Saskatchewan and Manitoba, workers are entitled to a one-week holiday with pay after a year of employment. A two-week holiday is given in British Columbia, Saskatchewan and Manitoba after a year of employment and in Alberta after two years except in the case of workers in the highway, pipeline and heavy

construction industries who are entitled to a two-week vacation after one year of service. A three-week holiday is required in Saskatchewan after five years of service with the same employer. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for each month. Coal miners in Alberta are entitled to a one-day holiday with pay for every 20 days worked in a month but not more than two weeks in a year.

Farm workers are excluded from the holiday provisions in all provinces, and domestic servants in all but Manitoba and Saskatchewan. In addition, Quebec exempts public corporation employees, salesmen, janitors and watchmen, and certain part-time workers. Ontario exempts professional workers, salesmen, and funeral directors and embalmers. Manitoba and Saskatchewan exempt ranch and market garden employees, and British Columbia exempts professional workers and horticultural workers.

Minimum Wage Regulations.—In Nova Scotia the minimum wage law applies only to women. In Ontario, though the Act applies to both sexes, Orders apply only to women. In Newfoundland, New Brunswick and Alberta there are separate Orders for men and women and lower rates are set for women. In British Columbia all but a few Orders set the same rates for men and women. The Manitoba Order sets lower rates for women than for men. In Quebec and Saskatchewan all Orders and the rates set apply to both sexes.

Table 1 shows the minimum rates in effect in December 1959 for several classes of establishment in the principal cities. In Newfoundland, New Brunswick, British Columbia and, with respect to men in Manitoba, the rates set are for the entire province. Elsewhere rates vary according to zone.

¹ Rates apply to 48 or 54 hours in factories; 48 hours in offices; 54 hours in laundries, shops, beauty parlours and theatres; 60 hours in hotels. ² Applies only to canning or processing of fish, vegetables or fruit. ³ Chauffeurs, watchmen, stationary enginemen and firemen 60 cents; bell boys 35 cents. ⁴ Dollars per week.

Section 2.—The Labour Force

The current pace of economic activity in Canada necessitates constant planning and study. To the labour leader, the business man, the social administrator and the legislator, this pace requires a continuous process of plan-revision. To provide up-to-date and reliable information concerning the Canadian labour force, a current and periodic analysis of the state of employment in Canada was organized. A labour force survey, on a sample basis, was conducted in the autumn of 1945 and quarterly surveys were carried on until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample covers over 35,000 households in more than 160 different areas of Canada. The estimates of the labour force are restricted to the civilian labour force; net strength of the Armed Forces is obtainable directly from official sources. Inmates of institutions and Indians living on reserves are excluded.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity during the week that precedes the beginning of the survey, and who had jobs or were seeking work during the survey week. These divisions of the labour force are defined as follows:—

- (1) **Persons with Jobs.**—This category comprises: (a) persons at work—those who did any work for pay or profit or who did unpaid work which contributed to the running of a farm or business operated by a relative; and (b) persons with jobs but not at work—those who had jobs but did not work because of illness, bad weather, vacation, industrial dispute or temporary layoff with definite instructions to return to work within 30 days of the time of being laid off. Persons who worked part of the survey week and also looked for work are classed as "persons with jobs".
- (2) **Persons without Jobs and Seeking Work.**—This classification includes those persons who were looking for work during the survey week and did not work. Persons who were temporarily away from their jobs during the whole of the survey week seeking other work were considered as without jobs and were included in this category. In addition to those who were actively looking for work, this classification includes persons who would have looked for work, except that they were temporarily ill, were on indefinite or prolonged layoff, or believed that no work was available.

Information relating to the population 14 years of age or over not in the labour force is also collected. Persons not in the labour force include such groups as those going to school or keeping house in their own homes, persons who are permanently unable to work because of old age or other reason, and persons who are retired or voluntarily idle. Persons such as housewives, students and others who worked part time are classed as "persons with jobs" or, if looking for work, they are classed as "persons without jobs and seeking work".

The estimates derived from the labour force surveys are subject to sampling error. In general the percentage of error tends to decrease as the size of the estimate increases. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete count is less than that shown below.

<i>Size of Estimate</i>	<i>Sampling Variability</i>
50,000.....	8,000
100,000.....	11,000
500,000.....	24,000
1,000,000.....	33,000
5,000,000.....	58,000

Data in Table 2 for June 1, 1946 to 1959 are compiled from labour force surveys conducted in late May or early June of those years. The information for years before 1946 is taken from estimates based upon 1931 and 1941 Census material rearranged according to the definitional system used in the labour force surveys, the revised census data being linked with the June 1946 survey on the basis of monthly and annual employment and unemployment figures.

2.—Estimates of the Civilian Labour Force and its Main Components, June 1, 1939-59

NOTE.—Figures do not include persons in institutions and Indians on reserves.

¹ Employers, 'own-account' and unpaid family workers.

² Newfoundland included from 1950.

Main Characteristics of the Civilian Labour Force, 1946-59.—At the beginning of June 1959 the civilian non-institutional population 14 years of age or over was 11,531,000, an increase of 32 p.c. over the June 1, 1946 population of 8,768,000. In the same period the civilian labour force increased 27 p.c. from 4,862,000 to 6,186,000. The proportion of the population 14 years of age or over in the labour force at the beginning of June 1959 was 53.6 p.c. as compared with 55.5 p.c. in June 1946. A higher average school-leaving age and an increased proportion of the population in the age group 65 years or over were mainly responsible for this decrease in the rate of labour-force participation. The effect of these factors was modified by the increased proportion of married women having jobs outside the home.

Persons with jobs increased 24 p.c. to 5,852,000 at the beginning of June 1959 from 4,738,000 in 1946. Employment in agriculture declined continuously over the period from 1,271,000 in 1946 to 724,000 in 1959, a decrease of 43 p.c. Non-agricultural employment, on the other hand, increased 48 p.c. from 3,467,000 in 1946 to 5,128,000 in 1959; paid workers employed in non-agricultural industries increased by 53 p.c. The number of persons without jobs and seeking work fluctuated over the period; the proportion of the labour force in this category at the beginning of June 1959 was 5.4 p.c. as compared with 2.6 p.c. at June 1, 1946.

The number of persons not in the labour force at the beginning of June 1959 was 5,345,000, a figure 37 p.c. higher than on June 1, 1946. The increase in this category was most marked for students.

While the proportion of males 14 years of age or over in the labour force decreased from an average of 85.2 p.c. in 1946 to 81.1 p.c. in 1959, the proportion of females in the labour force showed an increase from 24.7 p.c. to 26.7 p.c. Of the total females with jobs, an average of 27.2 p.c. in 1946 were married women; this proportion rose steadily year by year, reaching 44.9 p.c. in 1959.

The decline in agricultural employment relative to the population was large for both males and females. In 1946, 23.4 p.c. of the male population 14 years of age or over was employed in agriculture; by 1959 the proportion had dropped to 11.2 p.c. The decrease for females was relatively greater. Both males and females showed increases in the percentage of the population in non-agricultural employment even though for males the labour force participation rate decreased and the percentage of persons without jobs and seeking work nearly doubled. The proportion of males not in the labour force increased from 14.8 p.c. in 1946 to 18.9 p.c. in 1959; students advanced from 5.5 p.c. to 7.2 p.c. during the period. For females, the proportion not in the labour force decreased from 75.3 p.c. in 1946 to 73.3 p.c. in 1959. Females keeping house increased from 63.2 p.c. in 1946 to 66.7 p.c. in 1953 and by 1959 had dropped to 62.3 p.c. Females attending school increased over the period from 5.1 p.c. to 6.4 p.c. while the remainder of the category decreased from 7.0 p.c. to 4.6 p.c.

In 1946, 14.1 p.c. of the males and 14.4 p.c. of the females 14 years of age or over were in the 14-to-19-year age group. These percentages decreased gradually for five years, held steady for some time and in the following two years gave indication of increasing in line with the wartime increase in the birth rate. The proportion of males aged 65 years or over increased from under 10 p.c. in 1946 to about 11 p.c. in 1952, held steady until 1956 and then decreased somewhat; for females, the proportion 65 years or over increased from 9.5 p.c. in 1946 to 11.1 in 1959. There was little change during the period in the relative size of the 20-to-64 group for either sex.

3.—Percentage Distribution of the Population 14 Years of Age or Over in Labour Force and Non-labour Force Categories, by Sex, 1946-59

NOTE.—Percentages are annual averages; those for 1946-52, inclusive, are based on estimates from quarterly surveys and those for 1953-59 on monthly estimates.

Sex and Year	Population (14 years or over)	Labour Force				Not in Labour Force

Section 3.—Employment, Earnings and Hours*

Subsection 1.—Historical Commentary

Monthly reports on employment have been furnished for many years to the Dominion Bureau of Statistics by establishments usually employing 15 persons or over in the following major industrial divisions: forestry; mining; manufacturing; construction; transportation, storage and communication; public utility operation; trade; finance, insurance and real estate; and certain branches of the service industry, mainly hotels and restaurants, laundries and dry-cleaning plants, recreational and business services. The surveys relate to all sectors of the eight industrial divisions first named. To supplement the employment record that goes back to 1921, monthly statistics of weekly payroll disbursements have been prepared since 1941, permitting calculation of per capita weekly wages and salaries. Subsequently, these series were carried back, on an annual basis only, to 1939.

* Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

The current survey was further extended in the late months of 1945 to include information on earnings and hours of wage-earners for whom industrial establishments can furnish statistics of hours actually worked and paid for during periods of absence. Commencing in 1946, monthly figures of employment have been published separately for men and women. Additional and more detailed data on earnings and hours of work of both wage-earners and salaried employees are collected annually from manufacturers for the last week in October; this series yields separate figures for men and women in the two categories.

The statistics obtained monthly since 1941 relate to all paid workers on the staffs of respondents and their pay for services rendered or during paid absences in their last pay periods in the month, except that casual employees on strength for less than one day in the pay period are omitted. Statistics for owners are excluded by definition, even though they receive part of the return on their investment in the form of salaries. The earnings include wage and salary payments for straight-time and overtime work, shift differentials, regularly paid production, incentive and cost-of-living bonuses and commissions. Payrolls and hours reported for periods exceeding one week are reduced to weekly equivalents.

Although the surveys are restricted to establishments usually employing 15 persons or more, they include high but variable proportions of all paid workers at work in the covered industries as enumerated in the 1951 Census. The estimates of coverage in Canada range from 45 p.c. in the included service groups to 92 p.c. in manufacturing and 96 p.c. in mining, with the industrial composite figure relating to 79 p.c. of the total number in the industries surveyed. It is also estimated that the establishments contributing to the monthly record employed 62 p.c. of the total number of paid workers enumerated in all industries, including those in agriculture, fishing and trapping, education, health, government and other services excluded from the surveys, as well as employees of small establishments in the covered industries for which monthly data are not obtained.

Industrial employment averaged about 1.5 p.c. higher in 1959 than in 1958, but was 2.4 p.c. below the 1957 all-time high. The monthly employment indexes (1949=100) in the three years averaged 119.7, 117.9 and 122.6, respectively. Most industry divisions surveyed participated in the increase in 1959 over 1958, the exceptions being mining and transportation, storage and communication. On the average, mining employment was virtually unchanged between the two years and the annual figure for transportation, storage and communication declined by 1 p.c.

For a number of years, index numbers of industrial employment have been compiled separately for men and women. The year-to-year trends for workers of the two sexes have followed the same direction, but on some occasions the changes have differed in magnitude. Thus in 1958 the index for men fell from 1957 by 4.6 p.c. to 116.7, and that for women by only 1.4 p.c. to 122.0. The 1959 indexes were 118.6 and 123.5, respectively, showing relatively similar percentage increases of 1.6 p.c. and 1.2 p.c. over 1958. The greater stability of employment in industries largely staffed by women than in those requiring mainly male labour contributes materially to the smaller variations usually shown in the index for women.

The composite payroll index reached a new high of 205.7 in 1959, 6 p.c. above the 1958 figure and 5.6 p.c. higher than that for 1957. Average weekly wages and salaries continued to rise, the 1959 figure reaching \$73.47 as compared with \$70.43 in 1958 and \$67.93 in 1957. The movement of per capita earnings was steadily upward throughout the period for which these statistics are available (1939-59), the average increasing from \$23.44 in the earlier year to \$73.47 in the later. In the same period, the consumer price index (1949=100) rose from 63.2 to 126.5 and income tax rates increased substantially.

Subsection 2.—Employment and Weekly Wages and Salaries, 1959

The monthly industrial composite index of employment tended to increase gradually through the early part of 1959. However, the seasonally adjusted index declined in July and August, mainly owing to employment reductions in British Columbia, largely resulting

from industrial disputes in the province. Following termination of these disputes, the September adjusted index reached a level of 121.0, the highest recorded in the year. In the last quarter, the figures were slightly lower than in September, but averaged higher than those recorded for either of the first two quarters of 1959.

Employment by Industry.—Forestry employment tended to be higher in the 1959-60 winter season than in 1958-59 or 1957-58, but remained considerably below levels of most earlier winters in the postwar period. Mining employment (seasonally adjusted) was fairly steady through 1959, except for declines in February and March, reflecting temporary layoffs of coal miners in Nova Scotia. For most of the year, seasonally adjusted indexes for the industry remained close to 124 points, the level reached in the third quarter of 1958, following declines from the 1957 highs. The stability of the over-all mining figure hides fluctuations in some of the component industries. Thus employment in coal mining in 1959 was quiet, falling by 13.8 p.c. from 1958; employment in oil and natural gas showed a minor decline but moderate improvement was recorded in metal mining and in the non-metal group.

In manufacturing, employment in durable goods tended to advance through the early part of 1959 despite major layoffs in the aircraft industries. Industrial disputes in British Columbia brought down the figures for July and August. Steel shortages resulting from strikes in the United States led to layoffs which affected the November figures. In non-durables, a gradual upward movement through the first part of the year was reversed in the last half; weakness in the clothing and leather goods industries contributed to this decline.

Construction employment in most months of 1959 was higher than in the corresponding months of 1958. However, the seasonally adjusted index for the building and general engineering component of the industry began to decline during the autumn after rising through the early months of 1959.

Employment trends in the service-producing industries continued generally upwards through 1959, except in transportation, storage and communication. There were gains in service, in finance, insurance and real estate, in trade and in public utility operations, although trends in the latter two industries appeared to have levelled by the end of the year. Employment in several industries in the transportation, storage and communication division tended to decline in 1959. These industries included steam railways, water transportation and special communication projects.

6.—Annual Average Index Numbers of Employment by Industrial Group 1950-59, and Monthly Indexes 1958 and 1959

NOTE.—These indexes are calculated as at the last day of each month, on the base 1949=100.

¹ Includes New Westminster from 1956. ² The proportion of employees reported in metropolitan areas to the total reported by all employers making returns in Canada (12-month average).

Average Weekly Wages and Salaries.—Average weekly wages and salaries rose by 4.3 p.c. from 1958 to 1959. The increase was larger than those taking place in periods when employment was relatively quiet, but exceeded the year-to-year rises recorded in other years since 1947. The largest percentage increase was recorded for transportation, storage and communication (6.6 p.c.) in which group higher wage rates for railway employees were a major factor in the change. Increases in all other divisions except forestry and construction were very close to the 4.3 p.c. recorded in the general average. In construction, the rise was 2.7 p.c. Average weekly wages and salaries in forestry, where many wage-earners are paid on a piece-work basis, declined fractionally from 1958 to 1959. This was the first instance of a year-to-year reduction in average weekly earnings in any industry division noted in the postwar period. Industrial disputes in British Columbia, which affected the figures for July and August, contributed to the lower average for the industry in 1959, earnings in that province being above the Canada level.

10.—Annual Index Numbers of Employment and Payrolls, together with Average Weekly Wages and Salaries, by Industry, Province and Urban Area, 1957-59

Subsection 3.—Hours and Hourly Earnings, 1959

Since the end of 1944, the monthly survey of employment and payrolls has also obtained, for wage-earners, statistics of hours worked and paid for during periods of absence, with corresponding totals of gross wages paid to the wage-earners for whom records of hours are maintained. These are mainly hourly rated or production workers; the necessary information on hours is frequently not kept by employers for ancillary workers or, in many establishments, for any wage-earners. Salaried employees are excluded by definition from this series. In a number of industries, precise records of hours worked are lacking, with the result that data are available for fewer industries than are covered in the employment and average weekly wage and salary statistics.

The questionnaire used in the monthly survey calls for entry of the gross wage payments in the reported pay periods, before deduction for income tax and unemployment insurance deductions, etc. They include such items as payments for premium overtime work, shift differentials, production, incentive and cost-of-living bonuses where paid, as well as straight-time wages including the earnings of wage-earners employed for only part of the pay periods covered by the monthly surveys.

The general movement of average hourly earnings and weekly wages has been upward throughout the postwar years, while the work week has been shortened in most industries. In highway, bridge and street construction, however, average hours have risen since 1945, when labour and materials were in short supply. The changes from 1945 to 1959 are summarized in Table 12.

The percentage increases in earnings in manufacturing in the period have been notable, particularly in the non-durable goods component. Above-average expansion in recent years in employment in the relatively high-pay groups of that division, such as oil refining,

pulp and paper, and printing and publishing, and a levelling in several of the relatively low-pay industries, have been important factors in narrowing the percentage differences between earnings in plants producing durable goods and those manufacturing non-durable goods. Substantial advances in employment during the 14 years were also reported by several of the heavy industries, notably non-ferrous metal products and electrical apparatus and supplies, but the levels in these classes were closer to the divisional average so that the rise in their working forces had less effect on the group than the changes in industrial distribution taking place in the non-durable group as a whole.

Service.....	43.8	39.4	-10.0	0.43	1.00	+ 133	18.92	39.29	+ 108

In 1959, average hourly earnings in manufacturing generally rose 6 cents over 1958, or 3.6 p.c., to \$1.72. Although this gain was larger than that recorded in 1958 over 1957, it was smaller than in most of the postwar years. Per capita weekly wages also rose to a new high of \$70.16, increasing 5.1 p.c. over 1958. This was the greatest percentage advance since 1952 and was partly a result of a gain of 0.5 hours in the length of the average work week. At 40.7 hours, this was at its highest level since 1956.

In the durable goods component of manufacturing, average hourly earnings advanced by 3.9 p.c. in 1959 over 1958. With a rise of 0.7 hours in the length of the average work week, per capita weekly wages increased to a greater extent—by 5.9 p.c. Restoration of more usual conditions following settlement of major industrial disputes in iron and steel products and in smelting and refining, which had seriously affected the situation in 1958, contributed materially to the higher figures. Wage rates moved up in many industries. On the other hand, substantial lay-offs of relatively highly paid wage-earners in aircraft, railway rolling-stock and shipbuilding plants tended to offset the effect of these factors on the group averages.

Average hourly earnings in the light manufacturing industries showed a gain of 3.3 p.c. in 1959, bringing the figure to \$1.58. The average work week was 0.3 hours longer than in 1958 and weekly wages rose by 4.2 p.c. The gain in average hourly earnings was the smallest recorded in a year-to-year comparison since 1949, although that in weekly wages was larger than the 1958 increase over 1957, reflecting the longer work week. Wage-rate increases in meat products, breweries, rubber and textile products, pulp and paper mills, printing and publishing, petroleum refining and other industries contributed to higher average earnings in 1959. A higher level of employment in the rubber group, in

which earnings exceeded the divisional average, was also a factor. On the other hand, increased activity in industries employing high proportions of women, such as the textile, clothing and leather groups, with declines in the relatively highly paid petroleum refining and chemical industries, tended to limit the amount of the increase in the non-durable goods group as a whole.

In mining, average hourly and weekly earnings of the reported wage-earners were 4 p.c. higher in 1959 than 1958, while the work week was unchanged. Settlement of industrial disputes in base metal mines as well as wage-rate adjustments contributed to the increases. There was a moderate rise in average hourly earnings in construction, with a smaller gain of 2.5 p.c. in the weekly figure, average hours having fallen from the 1958 figure. Higher wage rates in electric and motor transportation accounted for much of the increase in earnings recorded in electric and motor transportation in 1959.

¹ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes all other manufacturing industries.

Subsection 4.—Hours and Earnings in Manufacturing Industries*

Information obtained in an annual survey of earnings and hours in manufacturing relating to the last week of October supplements the monthly data included in the preceding Subsections. Separate figures of hours and earnings of men and women wage-earners and salaried employees are obtained each year, while for some time additional data have been obtained in a triennial rotation. Distributions of wage-earners in a given range of hours were collected each year from 1946 to 1949 and every third year thereafter to 1958, for which statistics are given in Table 18. In 1950, 1953, 1956 and 1959, percentage distributions of wage-earners and salaried employees by amounts earned in the survey week were obtained (1956 data are given in the 1959 Year Book, p. 743; those for 1959 were not available at time of printing); and in 1951, 1954 and 1957, hours and earnings of office workers were segregated from those for managerial, supervisory, professional and other senior salaried employees (1957 data are given in the 1959 Year Book, p. 742).

The annual survey, like the monthly survey, is limited to establishments usually employing 15 or more persons and covers approximately 90 p.c. of all employees reported to the annual Census of Manufactures. Establishments are asked to report for all casual, part-time and full-time employees on their staffs in the survey week, excluding proprietors, firm members, pensioners, homeworkers, employees absent without pay throughout the week, and staffs in manufacturers' separately organized sales offices. Gross earnings for the week are required, including regularly paid bonuses, overtime pay and amounts paid for absences in the survey week. The reported hours comprise part-time, full-time and overtime hours worked and hours of paid absence. The general averages obtained are usually very similar to those derived from the corresponding monthly survey.

The annual survey reflects a continued upward movement in wages and salaries throughout the postwar period. Table 14 provides year-to-year comparisons of average earnings from 1949. In the decade, men's weekly wages rose by 58.5 p.c. and their salaries by 65.7 p.c. In the same period, women's weekly wages advanced by 54.2 p.c. and their salaries by 65.8 p.c. Because the general trend in working hours has been downward as a result of reductions in the standard work week and other factors, the increases in average hourly earnings of wage-earners have been proportionately greater than in weekly wages, the gains in 1958 over 1949 amounting to 68.2 p.c. for men and 58.8 p.c. for women.

Variations in the magnitude of the changes shown in the general and group averages and in the year-to-year comparisons are obviously related to varying economic and other conditions affecting the component industries in the survey periods, as well as to the industrial and, in some cases, the area distributions of the reported employees. Tables 15 and 16 show the 1958 averages of hours and earnings for wage-earners and salaried employees, respectively, for the provinces, the six largest metropolitan areas, the major industry groups and several important industries. It will be noted that women earn consistently lower average earnings than men in the same area or industry unit. This results not only from pay differentials and occupational differences, but also from such factors as a frequently shorter work week for women, a greater incidence of part-time work and absenteeism among them, their higher proportions of younger and less experienced workers, and their industrial distributions.

Salaried employees comprise increasing proportions of manufacturing staffs as a whole. Table 17 shows that the proportion of salaried employees has risen from 17.6 p.c. in 1949 to 24.4 p.c. in 1958. This trend is associated with developments in planning,

* More detailed information is given in DBS annual report *Earnings and Hours of Work in Manufacturing* (Catalogue No. 72-204).

administration and record-keeping which have increased requirements for professional and clerical personnel, and with changes in manufacturing processes which have frequently reduced employment for production workers per unit produced. Changes in industrial distributions of the employees reported also contribute to variations in the ratio of salaried personnel to wage-earners, which in any one period may be further influenced by seasonal, market and other conditions affecting levels of production. These usually cause sharper fluctuations in numbers of wage-earners than of salaried employees.

14.—Average Earnings of Male and Female Workers and Increases over the Preceding Year, Weeks Ended Oct. 31, 1949-58

(As reported by manufacturers usually employing 15 or more persons.)

Section 4.—Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and region or city, and standard weekly hours of labour are compiled by the federal Department of Labour and published in the annual report *Wage Rates, Salaries and Hours of Labour*. The statistics published are based on an annual survey covering some 20,000 establishments in most industries and apply to the last normal pay period preceding Oct. 1.

Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers in a given occupation are shown separately but are combined in the calculation of index numbers. Predominant ranges of rates for each occupation used are also given. Overtime pay is excluded.

The industry index numbers measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. More detailed information on concepts and methods of developing these statistics is given in the annual report.

19.—Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1949-58

(1949=100)

NOTE.—Indexes back to 1901 may be obtained from the Department of Labour publication *Wage Rates and Hours of Labour 1957*.

¹ Exclusive of Newfoundland.

Table 23 gives summary data on working conditions of plant and office employees in manufacturing industries for the years 1955 to 1959. The percentages in this table denote the proportions which employees—plant or office—of establishments reporting specific items bear to the total number of all such employees in all establishments replying to the survey; they are not necessarily the proportions of employees actually covered by the various items.

Two columns of percentages, designated as A and B, are given for the year 1959. The percentages in column A are comparable with those for previous years, being based on a similar establishment coverage; the percentages given in column B were compiled on the basis of an expanded mailing list, including as many as possible of the country's manufacturing establishments having 15 or more employees.

It will also be noted that for each of the years 1955 to 1958 the number of establishments shown as having plant employees is identical with the number having office employees, while for 1959 these numbers differ. The explanation is that in 1959 separate counts of establishments having plant workers and establishments having office employees were obtained, while in previous years counts of establishments were obtained without distinguishing between those with both plant and office employees and those with either one or the other only. Year-to-year differences in coverage for 1955 to 1958 are attributed to differences in rates of response or to the fact that all the establishments included in the survey did not necessarily operate in all years.

Wages of Farm Labour.—Wage rates for farm help have been increasing slightly over the past few years. Moderate gains were recorded in 1952 and 1953 and after levelling off in 1954 and 1955 the upward trend was resumed in 1956. The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland.

24.—Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1955-59

NOTE.—Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

Section 5.—Unemployment Insurance

During the depression of the 1930's the necessity arose for some form of systematic unemployment assistance, for legislation that would provide for federal control and administration of such assistance and for an employment service that would be closely related to it. In 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, consent of the provinces was sought to an amendment to the British North America Act to empower the Federal Parliament to legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance scheme and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations carried on under the Act. The Act, which came into effect on July 1, 1941, was later amended on several occasions and was replaced by a new Unemployment Insurance Act passed on July 1, 1955, and effective Oct. 2, 1955.

Legislation provides for compulsory coverage of some four-fifths of non-agricultural employees under an insurance program administered by the Federal Government, and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the

payment of benefits to unemployed insured persons. The Act is administered by a Commission of three persons appointed by the Governor in Council of whom one is the Chief Commissioner. One Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations, and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service, except the following: employment in specified industries or occupations such as agriculture, horticulture and forestry (effective Jan. 1, 1956, coverage was also extended to certain employments in these three industries); the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; private domestic service; private-duty nursing; teaching; certain director-officers of corporations; workers on other than an hourly, daily or piece rate, earning more than \$4,800 a year, unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece rate (including a mileage rate) are insured regardless of amount of earnings, together with all employees who receive \$4,800 or less at weekly, monthly, yearly or commission rates.

Unemployment Insurance Fund.—Employers and employees contribute to the Unemployment Insurance Fund, the amounts paid by each group being equal. The Federal Government contributes an amount equal to one-fifth of the combined employer-employee contributions and assumes the cost of administration. From July 1, 1941 to Mar. 31, 1957 employers and employees contributed \$1,950,260,488 to the Fund and the Federal Government added \$390,053,679. Interest and profit on the sale of securities amounting to \$246,910,437 and fines of \$340,830 made a total revenue of \$2,587,565,435.

Benefits first became payable on Jan. 27, 1942, and from that date to Mar. 31, 1957 total benefit payments amounted to \$1,843,365,310, leaving a balance of \$744,200,125 in the Fund. Revenues of the Fund are invested in Government of Canada and Canadian National Railway bonds with a par value of \$743,551,500 as at Mar. 31, 1958.

\$57.00 or over.....	60	60	1.20			

¹ The weekly contribution is based on actual earnings in the week irrespective of the number of days in which the earnings are obtained.

² Unemployment insurance stamps combine both employer and employee contributions.

³ Regular benefit rates calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. Since Oct. 2, 1955, a claimant, to justify for benefit, must have at least 30 weekly contributions in the last 104 weeks prior to claim; eight weekly contributions since the start of the last preceding regular benefit period or in the last year prior to claim, whichever is the shorter period; and 24 weekly contributions since the start of the last preceding benefit period, or in the year prior to the claim, whichever is the longer period.

⁴ Employees earning less than \$9 in a week receive one-half of a 32-cent stamp (8 cents from the employer and 8 cents from the employee).

The duration of regular benefit is related to the contribution history—one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 36 weeks. The rate of benefit is determined by the average of the contributions in the past 30 weeks. No benefit is payable in a benefit period until a claimant has served a waiting period equivalent to one full week's benefit.

Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Seasonal benefit is payable in the period Dec. 1 to mid-May to certain claimants whose benefits have been exhausted or who have insufficient contributions to qualify for regular benefit. Prior to 1958 the period was Jan. 1 to mid-April. A temporary extension of six weeks to the seasonal benefit period was made in 1958.

Statistics of Unemployment Insurance.*—Detailed statistics on unemployment insurance, collected for administration purposes, also provide information of general interest on employment and unemployment and on financial aspects of the scheme. Table 25 shows, for 1957 and 1958, the number of claims received each month in local offices of the Unemployment Insurance Commission, the number of active claimants at each month-end, the average weekly number of beneficiaries each month and total benefits paid. The number of claims received shows the volume of new cases of recorded unemployment among insured persons, while the number of active claimants at month-end indicates recorded unemployment at a given time. Initial and renewal claims filed in 1958 increased by 407,307 from the previous year to a total of 2,780,542. The month-end count of active claimants, who were either applying for or receiving benefit, averaged 380,178 in 1957 and 551,508 in 1958. The average weekly number of beneficiaries in the peak month of March was 498,300 in 1957 and 802,200 in 1958. The difference between the 1957 and 1958 levels of beneficiaries narrowed to 2,100 by December. Benefits paid rose from \$305,000,000 in 1957 to some \$493,000,000 in 1958.

* Statistics of unemployment insurance are compiled and published by the Unemployment Insurance Section, Labour Division, Dominion Bureau of Statistics, from material supplied by the Unemployment Insurance Commission. More detailed analysis of these data is available in DBS publication *Annual Report on Benefit Periods Established and Terminated under the Unemployment Insurance Act* (Catalogue No. 73-201) and monthly *Statistical Report on the Operations of the Unemployment Insurance Act* (Catalogue No. 73-001).

In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are published of the persons employed in insurable employment and of benefit periods established and terminated. The data on the insured population in Table 26 were obtained from returns from the renewal of insurance books and contribution cards at May 1, 1957 and June 1, 1958. Included are persons contributing in insurable employment on those dates and persons on claim. The number insured at June 1, 1958 increased by 247,770 from the previous book renewal to 4,055,090. Unemployment insurance was extended to fishermen on Apr. 1, 1957. This coverage change is interesting since the majority of commercial fishermen in Canada are not wage-earners but sharmen or lone workers. It was decided to treat as the 'employer' the person who first acquires the catch from the person who does the actual fishing. In some instances this is his actual employer, in others it is the buyer of the catch, and in still others it is the person or organization that markets the catch for the fisherman or makes contributions to the Fund. Fishermen were not considered for benefit until the 1957-58 seasonal benefit period.

Table 27 distributes by province persons establishing regular benefit periods, regular benefit periods terminated, average weeks paid and average dollar benefit paid on these terminations. A claimant establishes a *regular benefit period* when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit authorized, the weekly rate authorized and total entitlement are then calculated and the claimant's benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates when either he has exhausted the amount authorized or when 12 months have elapsed since he established, whichever comes first. The number establishing benefit periods in 1958 increased by 5,312 from 1,086,172 to 1,091,484. The duration of paid benefit in 1958 averaged 14.3 weeks, compared with 12.0 weeks in 1957. Ordinary benefit paid averaged \$313.87 on terminations in 1958, up from \$256.26 on terminations in 1957.

Table 29 gives the provincial distribution of persons establishing seasonal benefit periods in 1957 and 1958, average weeks paid and average benefits paid. Newfoundland claimants in 1958 averaged the largest duration of paid seasonal benefit but ranked below Prince Edward Island in 1957. Again, Newfoundland claimants averaged the highest paid benefit. The average duration of paid seasonal benefit was 7.08 weeks in 1957 and 11.20 weeks in 1958; the average benefit in 1957 amounted to \$141.86 in 1957 and \$233.37 in 1958.

Employment Service.—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint federal-provincial arrangement for more than two decades, were taken over by the Commission on Aug. 1, 1941, and additional offices were established in all provinces except Quebec. The Commission established its own offices in Quebec and the provincial government thereupon reduced the number of its offices.

Section 6.—Vocational Training*

The federal Department of Labour, under the authorization of the Vocational Training Co-ordination Act 1942, co-operates with the provinces in promoting and developing vocational training in Canada by sharing with the provincial governments the costs of establishing and operating various types of schools and training programs designed to fit trainees for employment.

The federal-provincial program under which all classes and training projects are operated is known as 'Canadian Vocational Training'. In conducting this program, the Minister of Labour receives advice and co-operation from the Vocational Training Advisory Council which consists of representatives of provincial governments, employers, organized labour and other bodies concerned with vocational training in Canada. Problems regarding apprenticeship, including federal participation therein, are referred to the Apprenticeship Training Advisory Committee which reports to the Minister through the Council.

The established procedure is to have all training programs operated by or under the supervision of the appropriate provincial authority and to reimburse the provinces for provincial government expenditures in connection with such projects. Where classes or training programs are operated for Federal Government departments, the Armed Forces, or other federal agencies, the provinces are reimbursed for the full costs; otherwise they are reimbursed for one-half of such expenditures subject to the limitation of funds voted for such purpose by Parliament.

There are three federal-provincial agreements governing the nature and extent of the sharable expenditures for different types of training: the Vocational and Technical Training Agreement No. 2, the Apprenticeship Training Agreement, and the Special Vocational Training Projects Agreement.

Vocational and Technical Training Agreement.—This Agreement which provides for the expenditure, over the five-year period that began Apr. 1, 1957, of \$40,000,000 of Federal Government assistance to the provinces in the building, equipping and operating of vocational and technical schools, institutes and training centres, was signed by all

* More detailed information is given in the annual report *Canadian Vocational Training Branch*, published as a supplement to the annual report of the Department of Labour.

provinces except Quebec. Of this amount, \$25,000,000 is provided exclusively for assistance on capital projects, with preference being given to trade and technical institutes although approved vocational high schools are also eligible to share. This capital appropriation is allotted to the provinces on the basis of population in the 15-19 age group. The remaining \$15,000,000 is distributed by way of annual allotments to the provinces for sharing in operating costs of similar institutes and schools or, if desired, a province may claim as much as half of its annual allotment against capital costs of such institutions. The Agreement provides for annual allotments totalling \$2,500,000 in each of the first two years of operation, \$3,000,000 in the third year, and \$3,500,000 in both the fourth and the fifth years. The annual allotments consist of initial allotments of \$30,000 to each province and \$20,000 to each of the Yukon and Northwest Territories, the remainder being allotted on the basis of population in the 15-19 age group. Federal expenditure under this Agreement for the year ended Mar. 31, 1959 was \$4,795,722.

Apprenticeship Training.—Apprenticeship agreements covering a ten-year period commencing Apr. 1, 1944 were signed by all provinces except Quebec and Prince Edward Island. Newfoundland signed an agreement in 1950 for the remainder of the 1944-54 period. These agreements were renewed for a further ten-year period expiring on Mar. 31, 1964. They provide for sharing, on a 50-50 basis, in provincial government expenditures on the training of indentured apprentices who are registered with the provincial Departments of Labour under the provisions of the apprenticeship Act of each province. Training is provided on the job and in specially organized classes which may be conducted on a full-time basis during the day or as part-time day or evening classes. As of Mar. 31, 1959, a total of 18,567 apprentices had been registered. Federal Government expenditures for this purpose for the year ended Mar. 31, 1959, were as follows:—

Province	Payment	Province	Payment
	\$		\$
Newfoundland.....	46,054	Alberta.....	391,005
Nova Scotia.....	82,332	British Columbia.....	362,165
New Brunswick.....	71,927	Northwest Territories.....	304
Ontario.....	519,512		
Manitoba.....	76,347	TOTAL.....	1,674,591
Saskatchewan.....	124,946		

Special Vocational Training Projects.—Agreements have been in operation since 1939 which provide for sharing with the provinces the costs of various types of training projects, other than those regularly conducted in schools assisted under the provisions of the Vocational and Technical Training Agreement No. 2 and programs of Apprenticeship Training. These Agreements are now consolidated under the Special Vocational Training Projects Agreement, effective from Apr. 1, 1959 until Mar. 31, 1964, except that the provision for sharing the costs of financial assistance to university students and nurses-in-training is subject to renewal on a year-to-year basis. The conditions governing financial assistance to the various types of projects are set forth in schedules attached to and forming part of the Agreement. These schedules cover special training classes for members of the Armed Forces and training programs arranged by the provinces for employees of the Federal Government departments, the costs of which are borne entirely by the federal treasury. In addition, the costs of the following types of classes are shared equally by the federal and provincial governments: training for unemployed persons who require such training to fit them for employment; rehabilitation training for disabled persons; short-term classes for employment in primary industries; training programs for supervisors in industrial establishments; and preparation, printing and revision of vocational correspondence courses made available by the provinces to students anywhere in Canada on the same terms as to students in the province where the course has been prepared. In the year ended Mar. 31, 1959, federal expenditures of \$1,183,352 were made towards programs now covered by the Special Vocational Training Projects Agreement.

Section 7.—Industrial Accidents and Workmen's Compensation

Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, from departmental correspondents and from press reports.

31.—Fatal Industrial Accidents, by Industry, 1955-58

Totals.....	1,326	1,462	1,387	1,269	100.0	100.0	100.0	100.0

Causes of Industrial Fatalities.—During 1958, of the 1,269 fatal accidents to industrial workers, 309 were the result of the victims being struck by objects: 54 by falling trees and limbs, 37 by objects falling or flying in mines and quarries, 32 by automobiles or trucks, 23 by tractors, loadmobiles, etc., 23 by objects being hoisted or conveyed, and 21 by landslides or cave-ins. Collisions, derailments, wrecks, etc., were responsible for 308 industrial fatalities; automobiles and trucks were involved in 151 of these fatalities; tractors and loadmobiles in 65; watercraft in 56; and aircraft in 21. Falls and slips were responsible for 224 industrial deaths, of which 215 were falls to different levels, including 51 deaths caused by falls into rivers, lakes, seas or harbours, 33 by falls from buildings, roofs or towers, and 32 by miscellaneous falls to different levels. Conflagrations, explosions and exposure to hot substances caused 145 industrial fatalities. There were 89 deaths caused by exposure to dust, poisonous gases and poisonous substances. Contact with electric current was responsible for 72 fatalities and 26 were caused by over-exertion, strain, etc.

Subsection 2.—Workmen's Compensation*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or for disablement caused by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined

* More detailed information is given in the Department of Labour publication *Workmen's Compensation in Canada, A Comparison of Provincial Laws*.

by the Board and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act.

In all provinces, free medical aid is given to workmen during disability. Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus, and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

Scope of the Workmen's Compensation Acts.—The Acts vary in scope but in general they cover construction, mining, manufacturing, lumbering, transportation and communication and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

Benefits.—Each Act provides for a waiting period, i.e., a minimum period of time during which a workman must be disabled from earning full wages in order to qualify for compensation. In Manitoba, Saskatchewan and Alberta the waiting period is one day. Compensation is not payable when a workman is off work only for the day on which the accident occurs but if he is disabled for a longer time compensation begins from the day following the accident. The waiting period in British Columbia is three days, in Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick four days, and in Quebec and Ontario five days. Where a disability continues beyond the waiting period, compensation is payable from the date of the accident. The waiting period does not restrict the right of the workman to medical aid which, under all the Acts, is given from the date of the accident.

Burial expenses are paid to the amount of \$400 in Quebec, \$300 in New Brunswick and Ontario, \$250 in Nova Scotia, Saskatchewan and British Columbia, and \$200 in Newfoundland, Prince Edward Island, Manitoba and Alberta. In all provinces except Prince Edward Island and Nova Scotia an additional sum is allowed for transporting the workman's body.

A widow or invalid widower or a foster mother with children under the age limit receives a monthly payment of \$90 in British Columbia, \$75 in Quebec, Ontario, Manitoba and Saskatchewan, \$60 in Newfoundland, Nova Scotia and Alberta, and \$50 in Prince Edward Island and New Brunswick. In addition, a lump sum of \$300 is paid in Quebec, Ontario, Manitoba and Saskatchewan, \$250 in British Columbia, \$200 in Prince Edward Island, \$150 in Nova Scotia and Alberta, and \$100 in Newfoundland and New Brunswick.

For each child in the care of a parent or foster mother receiving compensation a monthly payment of \$35 is made in Manitoba, Saskatchewan and British Columbia, \$30 in Alberta, \$25 in Quebec and Ontario, \$22.50 in Nova Scotia, and \$20 in Newfoundland, Prince Edward Island and New Brunswick.

For each orphan child a monthly payment of \$45 is made in Manitoba and Saskatchewan, \$40 in New Brunswick and British Columbia, \$35 in Quebec and Ontario, and \$30 in Newfoundland, Prince Edward Island, Nova Scotia and Alberta. In Alberta, a further amount, not exceeding \$10 a month, may be given at the discretion of the Board, and the maximum allowance payable to a family of orphans is \$120 in Prince Edward Island and \$150 in Nova Scotia. In Saskatchewan, the Board may in its discretion make a lump sum payment, not exceeding \$50, to an orphan child.

Invalids excepted, payments to children are not continued beyond the age of 16 years in seven of the provinces but the Board has discretion to pay compensation to the age of 18 (19 in Saskatchewan) if it is considered desirable for a child to continue his education. In Quebec, the age limit is 18 years, and in New Brunswick and British Columbia compensation is paid to the age of 18 if a child is attending school regularly.

In Newfoundland, Prince Edward Island and Alberta, payments are made to invalid children only for the length of time the Board considers that the workman would have contributed to their support. In the other provinces payments are continued until recovery.

All the Acts provide that where the only dependants are persons other than consort or children compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly amount to be paid to all such dependants is limited to \$100 in Ontario, \$90 in British Columbia, \$85 in Alberta, and \$60 in Prince Edward Island, Nova Scotia and Manitoba. In British Columbia, if a workman leaves dependent parents as well as a widow or orphans, the maximum payable to a parent or parents is \$90 a month. Compensation to dependants, other than consort or children, is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta and British Columbia, each Act places a maximum on the total amount of benefits payable to dependants if the workman dies. A maximum is placed on the amounts that may be paid to the widow and children and to orphan children in Prince Edward Island and Nova Scotia; in Prince Edward Island the maximum is \$170 to a widow and children and \$120 to orphan children, and in Nova Scotia the corresponding amounts are \$172.50 and \$150. The maximum to all dependants is 75 p.c. of the workman's earnings in Newfoundland, Prince Edward Island, New Brunswick, Quebec and Manitoba. In Ontario and Saskatchewan, the average earnings of the workman are the maximum amount payable.

Irrespective of the workman's earnings, however, compensation may not fall below certain minimum monthly amounts. The minimum payable to a consort and one child in Quebec is \$100 a month, to a consort and two children \$125, and to a consort and more than two children \$150; in Manitoba, the minimum is \$110 if there is a consort and one child and \$145 if there is more than one child; in Saskatchewan, the minimum is \$100 a month to a consort and one child and \$125 to a consort and two children plus \$15 a month for each additional child. In Newfoundland, a widow must receive at least \$60 a month with a further payment of \$20 a month for each child under 16 unless the total exceeds \$130. In Ontario, the minimum payable to a widow is \$75 a month with a further payment of \$25 for each child up to but not exceeding \$150 a month.

Compensation for total disablement in all provinces is a periodical payment for the duration of the disability equal to 75 p.c. of average earnings. Except in New Brunswick, the Acts fix minimum sums to be paid for a permanent total disability. The minimum is \$15 a week in Prince Edward Island and Quebec, \$25 in Manitoba, Alberta and British Columbia, and \$30 a week in Saskatchewan. In Newfoundland, the minimum is \$65 a month, and in Nova Scotia and Ontario \$100 a month. If average earnings are less than the minimum amount allowed, the amount of the earnings is paid in all provinces except Nova Scotia and Saskatchewan. For partial disablement, compensation is either 75 p.c. of the difference in earnings before and after the accident or the amount is determined by the Board on the basis of impairment of earning capacity estimated from the nature of the injury. In the latter case the workman is entitled to the same fraction of 75 p.c. of earnings as his impairment is of his full earning capacity. In all provinces, if the impairment of earning capacity is 10 p.c. or less (5 p.c. or less in Alberta), a lump sum may be given.

The average earnings on which compensation is based are limited to \$5,000 a year in Quebec, Ontario, Saskatchewan and British Columbia, \$4,500 in Manitoba, \$4,000 in New Brunswick and Alberta, \$3,600 in Nova Scotia, and \$3,000 in Newfoundland and Prince Edward Island. If the workman's earnings at the time of accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid to a workman under 21 years of age may be raised later if it appears that his earning power would have increased had the injury not occurred.

Table 32 gives the number of industrial accidents reported by each of the provinces and the amount of compensation paid by the Workmen's Compensation Board in the years 1957 and 1958.

32.—Industrial Accidents Reported and Compensation Paid by Workmen's Compensation Boards, 1957 and 1958

¹ Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces. ² Includes, except where noted otherwise, payments to compensate loss earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities. ³ Excludes payments by employers who make direct compensation to their employees; such employees come under Schedule II of the Ontario and Quebec Workmen's Compensation Acts. ⁴ Excludes hospital and rehabilitation costs.

Section 8.—Organized Labour in Canada*

Close to 1,460,000 Canadian workers belonged to labour unions in 1959. Two central bodies—the Canadian Labour Congress and the Canadian and Catholic Confederation of Labour—continued to represent some 85 p.c. of organized labour, with most of the remainder distributed among organizations active on a regional, national or international level, but independent of a central labour congress. At the beginning of 1959 unions belonging to the Canadian Labour Congress had a total membership of 1,154,000, and the membership of the Canadian and Catholic Confederation of Labour was approximately 97,000.

More than two-thirds of the organized labour force in Canada belong to unions that operate on the international level. Ninety of the 110 international unions active in Canada in January 1959 were affiliates of the Canadian Labour Congress, and 84 of these were also within the American Federation of Labor and Congress of Industrial Organizations. Twelve of the remaining 20 international unions had no congress link in Canada, but were affiliated with the AFL-CIO. There were 51 national and regional unions in Canada at the beginning of 1959, 20 of them affiliated with the CLC and 13 with the CCLL.

* A special article on the History of the Labour Movement in Canada prepared by Dr. Eugene Forsey, Director of Research, Canadian Labour Congress, appears in the 1957-58 Year Book, pp. 795-806.

International, national and regional unions had together a membership of more than 1,381,000, distributed among 161 organizations ranging in size from eight members to the 80,000-member United Steelworkers of America. The United Brotherhood of Carpenters and Joiners of America retained its position as the second largest union in Canada with nearly 70,000 members, followed by the 60,000-member International Union, United Automobile, Aircraft and Agricultural Implement Workers of America. The National Union of Public Employees, with a membership of nearly 43,000, was the largest national union in Canada in 1959, surpassing the Canadian Brotherhood of Railway, Transport and General Workers, which was in first place in 1958.

The grand total of nearly 1,460,000 members reported by labour organizations in 1959 to the Canadian Department of Labour amounted to approximately 33 p.c. of the estimated total number of non-agricultural paid workers in Canada.

33.—Union Membership in Canada, 1930-59

Section 9.—Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. Tables 36 and 37 cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Where the number of workers involved varied in the course of a stoppage, the peak figure was used in tabulating annual totals. Workers indirectly affected, such as those laid off as a result of a work stoppage, were not included in the number of workers involved.

Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. Where the number of workers involved varied during the period of a stoppage, an appropriate adjustment was made in the calculation as far as this was practicable. The duration in man-days of all work stoppages in a year is shown as a percentage of estimated working time, based on the annual average of all non-agricultural paid workers in Canada.

The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the economy.

Section 10.—Canada and the International Labour Organization

The Department of Labour is the officially designated liaison between the Government of Canada and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization and by the United Nations General Assembly in 1946, the Organization became a specialized agency of the United Nations although retaining its autonomy.

The ILO is an association of 80 Member States, financed by their governments, and democratically controlled by representatives of those governments and of their organized employers and workers. It is comprised of three main organs: (1) the Governing Body; (2) the International Labour Office; and (3) the International Labour Conference. Since World War II the ILO has extended its field of activities by the establishment of ten tripartite industrial committees to deal with problems of important world industries, by the holding of regional and special technical conferences, and by technical assistance to aid under-developed countries in such fields as co-operatives, vocational training, productivity techniques and employment service organization.

The Governing Body consists of 40 members—20 government representatives, 10 employers' representatives and 10 workers' representatives. Of the government seats, each of the 10 Member States of chief industrial importance (of which Canada is one) holds a permanent place, and the other 10 government representatives are elected triennially by the Conference. The worker and employer members are elected by their groups every three years at the Conference. The Governing Body meets three times a year and has supervision over the work of the International Labour Office and the various

Conferences and Committees, in addition to framing the budget and approving the agendas of the Conferences and meetings. Canada's representative on the Governing Body is the Assistant Deputy Minister of Labour for Canada.

The International Labour Office acts as the permanent secretariat of the ILO and as a world research and information centre and publishing house on all subjects concerned with working and living conditions. In the operational field it assists Member States by furnishing experts on manpower training and technical and other types of assistance. The ILO maintains branch offices in all parts of the world; the Canada Branch is located at 202 Queen Street, Ottawa.

The International Labour Conference is a world assembly for the consideration of labour and social problems. It meets annually and is attended by four delegates from each Member State (two representing the government, one representing the employers and one representing the workers) accompanied by technical advisers. The Conference formulates international standards concerning working and living conditions in the form of Conventions and Recommendations. A Convention, after adoption, must be considered by the competent authorities in each Member State with a view to possible ratification; however, each Member State decides whether or not to ratify any Convention, and only by ratification does it assume the obligation to bring its legislation in that field up to the standard set by the Convention. A Recommendation is less formal: it contains general principles for the guidance of governments in drafting legislation or in issuing administrative orders and is not subject to ratification by the Member States.

There have been 43 Sessions of the International Labour Conference at which 114 Conventions and 112 Recommendations have been adopted, covering a wide range of subjects such as industrial relations, freedom of association, hours of work, weekly rest, holidays with pay, minimum wages, night work of women and young persons, industrial health and safety, workmen's compensation, conditions of work for seamen and dockers and for fishermen, unemployment and health insurance, protection of migrant workers, equal remuneration, discrimination, forced labour, and many other aspects of industrial and social problems. By Jan. 1, 1960, ratifications of Conventions by Member States numbered 1,935.

Canada has ratified 19 ILO Conventions, of which 12 concern maritime and dock labour. In Canada the provincial legislatures are the competent legislative authorities with jurisdiction over the subjects covered by most of the ILO Conventions and Recommendations. The Department of Labour, as the official link with the International Labour Organization, is responsible for forwarding to the ILO annual reports on ratified Conventions as well as periodical reports on many other industrial and social matters. Canada is represented at most of the ILO annual and special meetings, and accounts of the discussions and the decisions are regularly published in the *Labour Gazette*. The Department also keeps the provincial governments and the major employer and worker organizations informed of ILO activities.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by areas of rough, rocky forest terrain such as the region lying between New Brunswick and Quebec, and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. Unevenly distributed along a narrow southern strip of Canada's vast area is its relatively small population of 17,442,000 (estimate of June 1, 1959). To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence.

The extent of government control over the agencies of transportation is covered in Part I of this Chapter; Parts II to VI deal with the various types of transport facility.

PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION

The Federal Government's control and regulation of transportation reflect to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was a direct outcome of such particular matters as the prevention of unjust discrimination in rates and charges resulting from monopoly conditions in the industry and the safety of

transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime, conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway transportation. Unlike the competition that existed between railways in early stages of their development, today's competition shows little indication of starting a trend toward consolidation and a return to semi-monopolistic conditions within the industry. Because so many shippers now provide their own transportation, it is evident that a large part of the present competition between common carriers has become a permanent feature of the transportation industry.

It is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, are now alleged to have become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are therefore faced with the problem of piecemeal revision of their regulations—retaining those where railway monopoly or near-monopoly conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to maintaining a balance between the several competing modes of transport. Indicative of this trend is the amendment to the Transport Act passed in 1955, which extends the freedom of the railways to make contract rates with shippers known as 'agreed charges'.

On Nov. 2, 1936, the amalgamation of the Department of Railways and Canals and the Department of Marine, together with the Civil Aviation Branch of the Department of National Defence to form the new Department of Transport brought under one control railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

Road and highway development is mainly under provincial or municipal control or supervision. According to the judgment of the Judicial Committee of the Privy Council dated Feb. 22, 1954, jurisdiction over interprovincial and international highway transport rests with the Federal Government. Federal and provincial representatives conferred at Ottawa in April 1954 on means of implementing that decision and on June 26, 1954, the Motor Vehicle Transport Act was passed by the Federal Parliament giving to all provinces, at their option, the authority to apply to interprovincial and international highway transport the same regulations respecting certificates of public convenience and necessity and rates as they apply to undertakings operating entirely within the province. This Act has since been proclaimed in seven provinces.

The Board of Transport Commissioners for Canada.—The Board of Transport Commissioners for Canada was created and initially named the Board of Railway Commissioners for Canada by the Railway Act 1903, and was given its present name by the Transport Act 1938. It was organized on Feb. 1, 1904, and succeeded to all the powers and duties of its predecessor, the Railway Committee of the Privy Council. It was also given additional powers and duties which have been greatly enlarged since that date. When organized, the membership of the Board consisted of a Chief Commissioner, a Deputy Chief Commissioner and one Commissioner. In 1908 an Assistant Chief Commissioner and two other Commissioners were added. The Board is a statutory court of record, so constituted by the Railway Act and recognized as such by other courts, but it also has extensive regulative and administrative powers.

The great majority of applications and complaints to the Board are disposed of without hearing in open court, but public hearings are held in various places throughout Canada as the Board sees fit, particularly to suit the convenience of the parties and avoid expense to them. Evidence at public hearings is given under oath and interested parties appear personally or by counsel or representatives. The finding or determination of the Board upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of

Canada upon a question of law or a question of jurisdiction with leave of a Judge of that Court, or by the Governor in Council.* Two Commissioners are a quorum or 'panel' for the hearing of a case and it is not unusual for two panels to be sitting at the same time on different appeals.

The Board has jurisdiction under more than a score of Acts of Parliament, including jurisdiction, under the Railway Act and the Transport Act, over transportation by railway and by inland water, and over communication by telephone and telegraph.

Under the Railway Act its jurisdiction is, stated generally, in respect of construction, maintenance and operation of railways that are subject to the legislative authority of the Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation, freight and passenger rates, and uniformity of railway accounting. The Board also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada, the British Columbia Telephone Company, the Quebec and Gaspé Telephone Company and the Yellowknife Telephone Company, and over express traffic and tolls for the use of international bridges and tunnels.

The Board has jurisdiction to inquire into, hear and determine any application by any party interested who complains that any company or person has violated or failed to comply with the Railway Act or a Special Act or any order made thereunder, or who requests the Board to make any order or give any direction, leave, sanction or approval that, by law, it is authorized to make or give or with respect to any matter, act or thing that by the Railway Act or Special Act is prohibited, sanctioned or required to be done. It has power to make orders and regulations generally for carrying the Railway Act into effect and for exercising jurisdiction conferred on the Board by any other Act.

Regulation of railway freight and passenger rates is one of the Board's principal tasks. Except for certain statutory rates, it has power "to fix, determine and enforce just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require"; it may disallow any tariff that it considers to be unjust or unreasonable or contrary to any provision of the Railway Act; it may prescribe other tolls in lieu of the tolls disallowed, or require the railway company to substitute a tariff satisfactory to the Board. Since the end of World War II there has been a succession of applications for authority to make general freight rate increases and general telephone rate increases.

A review of transport regulation was undertaken by the Royal Commission on Transportation, under the chairmanship of the Hon. W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951. (See 1952-53 Year Book, p. 741.) Certain of its recommendations, including the following, were incorporated into the Railway Act by amendments made in 1951: the equalization of freight rates; the requirement that, when transcontinental competitive freight rates are published, the corresponding rates to intermediate points shall not be more than one-third greater than the former; the payment by the Government of Canada of the cost of maintaining the so-called 'bridge' lines of the transcontinental railway systems in Ontario (between Sudbury, Capreol and Cochrane, and between Port Arthur and Armstrong) up to the amount of \$7,000,000 annually, the amounts so received by the railways to be applied to reductions in freight rates between Eastern and Western Canada over the trackage referred to; and the requirement of a uniform classification of accounts to be prescribed by the Board of Transport Commissioners for the Canadian Pacific Railway and the Canadian National Railways. Pursuant to the amendments, a uniform scale of mileage class rates has been prescribed by the Board and equalization of commodity rates is being proceeded with. The Board has also prescribed a uniform classification and system of accounts for railways and has approved a new freight classification.

* The Board's judgments are reported in *Canadian Railway Cases* and *Canadian Railway and Transport Cases*, and its judgments, orders, rulings and regulations are published fortnightly by the Queen's Printer, Ottawa, in what is known as *J.O.R. & R.*

Under the Transport Act the Board entertains applications for licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence the Board must be satisfied that public convenience and necessity require such transport. The Board also has regulative powers over tolls for such transport.

'Agreed charges' between shippers and carriers, authorized by the Transport Act, were also reviewed by the Hon. W. F. A. Turgeon in 1955 and his recommendations were implemented in amendments to that Act in 1955. Under the amendments, an agreement for an agreed charge shall be executed in tariff form and a duplicate original shall be filed with the Board within seven days after the making of the agreement, and the agreed charge takes effect twenty days after the filing, without necessity of the Board's approval of the charge. The Board continues to have power to fix a charge for a shipper who is unjustly discriminated against by an agreed charge and it also has power to vary or cancel an agreed charge referred to it by the Minister of Transport or the Governor in Council for investigation.

The Board is required by the Railway Act to make an annual report to the Governor in Council through the Minister of Transport. Copies may be obtained from the Secretary.

During the year 1959, a total of 3,153 applications were submitted to the Board under the provisions of the Railway Act, the Transport Act, the Maritimes Freight Rates Act, the Pipe Lines Act* and other legislation under the Board's jurisdiction; 3,330 Orders and 18 General Orders were issued.

The Board, shortly after the interim freight rate increase of 17 p.c. was authorized in November 1958, required the railways to specify before Apr. 10, 1959, the amount of supplementary relief sought. But before that date, the Government announced that no further general increases would be allowed for a period of one year pending the findings of a Royal Commission to be established to inquire into the railway rate structure and other matters affecting railway transportation. The Royal Commission was appointed May 13, 1959 and is still conducting hearings (August 1960) across Canada, receiving submissions from the railways and all interested parties. On July 8, 1959, Parliament passed the Freight Rates Reduction Act. Designed as a relief measure for shippers, the Act provided a fund of \$20,000,000 to permit a reduction in class rates and commodity rates (other than competitive rates) on Canadian railways for a period of one year—to Aug. 1, 1960. In compliance with the Act, the Board of Transport Commissioners ordered the substitution of an increase of 10 p.c. for the said permissive increase of 17 p.c. A further reduction to 8 p.c. was ordered by the Board as of May 1960 to continue in effect until Aug. 1. By an amendment to the Freight Rates Reduction Act dated July 28, 1960, the reduced rates will remain in effect until Apr. 30, 1961, and the \$20,000,000 authorized in lieu of the higher rates is increased to \$35,000,000.

The Air Transport Board.—The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. Subsequent amendments to the Act were made in 1945, 1950 and 1952. The Board has three members including the Chairman, and the staff comprises an Executive Director's Branch including Legal and International Relations Divisions, an Operations Branch comprised of the Traffic Division, Special Traffic Adviser and the Licensing and Inspection Division, and a Secretary's Branch including Administrative and Special Projects Division.

The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public.

* With the coming into effect of the National Energy Board Act as of Nov. 1, 1959, the administration of pipelines legislation was transferred to the National Energy Board.

As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and reports, ownership, transfers, consolidations, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders, relating to all air services or groups of air services; Board Orders relating to individual air services; and Rules and Circulars for general guidance and information.

Financial and operating statistics are collected under authority of the Board's Regulations by the Economics Division of the Department of Transport.

The Board continues to devote special attention to the uniform charter tariff and to its interpretation for the guidance of operators in the establishment of their rates and fares. Regional route operations are under current review by a staff committee set up for the purpose.

In the field of international aviation, the Board continues to take an active part in the work of the International Civil Aviation Organization, and to undertake bilateral negotiations with a number of countries for the exchange of traffic rights. Canada's two designated international scheduled carriers, Trans-Canada Airlines and Canadian Pacific Airlines Limited, have recently extended their operations pursuant to bilateral agreements, to serve Vienna and Rome, respectively (see pp. 871 and 872).

Canadian Maritime Commission.—By authority of an Act of Parliament (RSC 1952, c. 38) passed in 1947, the Canadian Maritime Commission was constituted for the purpose of examining into, keeping records of, and advising the Minister of Transport on matters pertaining to Canadian shipping and shipbuilding services. In addition to these duties, the Act empowers the Commission to:—

- (1) exercise and perform on behalf of the Minister such powers, duties and functions of the Minister under the Canada Shipping Act 1934 as the Minister may require;
- (2) administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament; and
- (3) exercise or perform any other powers, duties or functions conferred on or required to be performed by the Commission by or pursuant to any other Act or order of the Governor in Council.

The Commission is also responsible for the administration of a number of the provisions of the Canadian Vessel Construction Assistance Act.

The National Energy Board.—The National Energy Act (SC 1959, c. 46) proclaimed Nov. 1, 1959, provided for the establishment of a five-member Board charged with the duty of assuring the best use of energy resources in Canada. In the performance of this function, the Board is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipeline, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. Up to mid-1960, the work of the Board was confined mainly to the conducting of hearings in connection with the issuing of permits to export oil and gas and for that reason is covered in more detail in the Foreign Trade Chapter of this volume (see Index).

PART II.—RAIL AND URBAN TRANSPORT*

Section 1.—Railways

Since Confederation the railways of Canada have been the principal utility for the movement of passengers and freight throughout, and beyond, the nation. The two great national systems, supplemented by a newly completed north-south line on the West Coast

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division. Certain of the financial statistics were compiled in co-operation with the Department of Transport.

and a few regional independent railways, are the only carriers able to transport large volumes of freight at low cost in all weather by continuous passage over Canadian transcontinental routes. Though highway and air competition is increasing, the railways still retain their primary position in the freight transport field. However, growing public preference for air travel on long trips and for the use of private automobiles over short distances has greatly affected railway passenger services. Passenger trains have been eliminated on some branch lines and reduced on certain main lines, and economies have been derived from the wide use of rail diesel cars.

The two national railway companies control a wide variety of Canadian and international transport and communication services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. In addition, it operates a fleet of coastal and ocean-going steamships, a national telegraph system connecting the principal points of Canada with other parts of the world, an extensive express service in Canada and abroad, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European points. Its chief competitor, the Canadian Pacific Railway, is a joint-stock corporation operating an extensive transcontinental railway supported by a national telegraph system with connections throughout the world, a large fleet of inland, coastal and ocean-going vessels, a chain of year-round and resort hotels, a domestic north-south airline which is one of the world's great air-freight carriers, a transpacific airline service to the Orient and the Antipodes, air services to Mexico, Peru, Chile and Argentina, a transpolar air route connecting Vancouver and Amsterdam, a transatlantic service to Lisbon, Madrid and Rome, and a limited (one-flight daily each way) transcontinental air service between Vancouver and Montreal. Also included in the company's operations are a world-wide express service and a domestic truck and bus network.

The Pacific Great Eastern Railway, owned by the British Columbia Government, operates over a 788.6-miles route from North Vancouver to Fort St. John in the Peace River area of northeastern British Columbia, with a branch line from Chetwynd to Dawson Creek. The completion in 1958 of the northern extension of this line opened up to development the vast interior of the province and brought to an end the biggest railway construction job undertaken in North America for two decades. With the completion in May 1959 of the last link in the microwave system, the PGE became the first railway on the Continent to be operated entirely by means of radio communication.

The statistics of Subsections 1 to 3 of this Section cover the combined railway facilities of all companies operating in Canada, including intercity freight and passenger services of electric railway companies. Details relating to the Canadian National Railway System are dealt with separately in Subsection 4. A special article covering the consolidation and organization of the CNR appears in the 1955 Year Book at pp. 840-847.

Subsection 1.—Milage and Equipment

Construction was begun in 1835 on the first railway in Canada—the short link of 14.5 miles between Laprairie and St. Johns, Que.—but only 66 miles were in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building (1900-17), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

Only a gradual increase has taken place in the milage of single track line since the 1920's. Recently, however, the development of a number of large industrial projects in districts far removed from transport facilities has necessitated the building of branch lines.

Those constructed up to 1956 are listed in the 1957-58 Year Book at p. 815, and those constructed in 1957 and 1958 in the 1959 Year Book at p. 775. During 1959 the eastern section of the Chibougamau branch line constructed by the CNR from St. Félicien to Cache Lake in Quebec, a distance of 133 miles, was officially opened; the western section of this line, from Beattyville to Chibougamau, was completed in 1957, opening up mineral-rich areas and linking them with the industrial centres of the province. On the 52-mile line from Optic Lake to Chisel Lake in Manitoba, track-laying and much of the first ballast lift were completed. This line is being constructed to connect a base metal mining development with the smelter at Flin Flon.

While new construction has added considerably to single track mileage placed in operation in the past few years, other lines have been abandoned because they have become unprofitable. Thus new mileage is not altogether reflected in the totals shown in Table 1.

1.—Railway Track Mileage Operated, 1900-58

NOTE.—Figures of total mileage of single track operated for 1835-1909 are given in the 1941 Year Book, p. 546; for 1911-14 in the 1954 edition, p. 786; for 1916-24 in the 1955 edition, p. 830; and for 1925-49 in the 1956 edition, p. 792.

² Includes 28 miles of joint track.

³ Excludes 51 miles of joint track.

Rolling-Stock.—Although the figures of Table 2 show the number of the different types of rolling-stock in operation at the end of year from 1949 to 1958, they do not by any means give a complete picture of rolling-stock capacity for service. Each year hundreds of units, particularly freight cars, are retired and replaced by new more efficient equipment, much of it specially designed and engineered for specific hauling jobs. Improvement in the efficiency of car use is also a factor that may reduce amount of equipment required. Between 1949 and 1958 the average capacity of box cars increased from 43.5 tons to 46.6 tons, of gondola cars from 61.5 tons to 65.6 tons, flat cars from 42.9 tons to 46.8 tons, hopper cars from 58.7 tons to 66.5 tons and of all freight cars from 45.3 tons to 50.8 tons. The average tractive power of locomotives advanced during the same period from 41,923 lb. to 52,095 lb. Table 2 shows the increasing number of diesel locomotives in service up to the end of 1958; rapid replacement of steam units continued during the following year and by mid-1960 dieselization of the major lines was almost complete.

³ Includes 20 cars

Subsection 2.—Finances

The tables in this Subsection give information on capital liability and capital investment, earnings, operating expenses, employees and their earnings and government aid to all railways.* Financial statistics of government-owned railways are given separately and in detail in Subsection 4. A Uniform Classification of Accounts for common carriers became effective for the Canadian National and the Canadian Pacific Railways on Jan. 1, 1956, and for all other railways on Jan. 1, 1957. In transportation statistics a distinction is made between expenditures and expenses. In this Subsection, the term 'expenses' is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operations incident thereto, including maintenance and depreciation of the plant used in such service.

Capital Liability and Investment.—The capital liability of railways operating in Canada for the years 1939 to 1958 is shown in Table 3. The increase of \$269,554,630 in 1958 over 1957 compares with an increase in investment in road and equipment property of \$342,996,674 as shown in Table 4.

* Statistics for individual railways are given in DBS annual report *Railway Transport*, published in six parts (Catalogues Nos. 52-207—52-212).

3.—Capital Liability of Railways, 1939-58

NOTE.—Figures for 1876 to 1925 are given in the 1927-28 Year Book, p. 649, and those for 1926-38 in the 1947 edition, p. 662.

(Exclusive of Canadian railway capital owned by Canadian railways)

¹ Prior to 1956 and the Uniform Classification of Accounts, these data included investments in separately operated property, leased lines and non-cash items. ² Includes \$121,230,690 invested in the Quebec North Shore and Labrador Railway which reported for the first time in 1955.

Revenues and Expenses.—During the ten-year period 1949-58, the ratio of expenses to revenues of railways operating in Canada has fluctuated between a low of 86.94 p.c. in 1950 and a high of 97.30 in 1958. The trend for both revenues and expenses has been generally upward during the period, revenues being 30.1 p.c. higher in 1958 than in 1949 and expenses 36.2 p.c. higher. As a result of outlay increasing more rapidly than income, net operating revenue per mile of line in 1958 was at its lowest point since 1938.

5.—Operating Revenues and Expenses of Railways, 1949-58

NOTE.—Operating revenues and expenses from 1875 are given in previous editions of the Year Book beginning with the 1916-17 edition.

¹ Reported as operating expenses in accordance with the Uniform Classification of Accounts adopted in 1956.

Employment and Salaries and Wages.—During the period 1949-58 the number of railway employees fluctuated between a low of 190,385 in 1950 and a high of 215,324 in 1956; the 1958 figure was very little above that of 1949. In the same period annual average salaries and wages increased almost steadily from \$2,721 to \$3,931. Maintenance-of-equipment employees, on hourly rates, worked 17 p.c. fewer average hours and were paid 81 p.c. more wages per hour; average hours worked by transportation employees were 16 p.c. fewer, while their pay per hour was about 69 p.c. higher. These figures reflect salary and wage increases and the effects on employment of the five-day work week inaugurated in 1951. Statistics from 1956 have been reported in accordance with the revised "Canadian Classification of Railway Employees and Their Compensation" which became effective Jan. 1, 1956.

7.—Railway Employees and Their Earnings, 1949-58

NOTE.—Figures include employees and wages for 'outside' operations amounting to from 3 to 6 p.c. of total employees and from 2 to 5 p.c. of total salaries and wages. Figures for 1912-39 are given in the 1941 Year Book, p. 551, and for 1940-48 in the 1951 edition, p. 723.

¹ Newfoundland included from Apr. 1, 1949.

² Includes employees engaged in cartage and highway transport (rail) operations.

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the federal or provincial governments since 1939.

During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure, through funds raised by the issue of new bonds with Federal Government guarantee. Bonds guaranteed by the Governments of New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have been eliminated in this manner in recent years. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1958, amounted to \$1,024,612,449; this amount does not include \$97,756 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

Subsection 3.—Traffic

Table 8 shows passenger and freight statistics for all railways for the years 1949-58. A separate analysis of the operations and traffic of the Canadian National Railways is given at p. 820.

8.—Statistics of Passenger and Freight Services and Revenue Receipts, 1949-58

NOTE.—Figures for 1910-48 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition.

¹ Includes express, baggage, mail and other cars. ² Duplications included. ³ Newfoundland included for 1950 and subsequent years. ⁴ Includes caboose miles but excludes miles made in passenger and non-revenue trains. ⁵ Excludes traffic handled by more than one railway; see Table 9 for details of freight carried.

Revenue freight carried on railways in 1958 was considerably lower than in 1957, the over-all decrease amounting to 11.8 p.c. Among the main commodity groups, agricultural products was the only one to record an increase, attributable to higher shipments of grain. Mine products were down 18.3 p.c., animal products 15.7 p.c., forest products 12.5 p.c., and manufactures and miscellaneous products 10.0 p.c. Of the 153,441,756 tons moved in 1958 (excluding freight handled by more than one railway and in intermediate switching), mine products accounted for 39.0 p.c., manufactures and miscellaneous products for 30.3 p.c., agricultural products for 19.1 p.c., forest products for 9.5 p.c., animal products for 1.1 p.c., and less than carload freight for 1.0 p.c.

9.—Commodities Hauled as Freight on Railways, 1955–58

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

Railway Accidents.—The figures given in Tables 10 and 11 of persons killed or injured on railways include those involved in both train and non-train accidents. All passengers injured are included in the figures but, for employees, only those that kept the employee from his work for at least three days during the ten days following the accident are recorded.

10.—Passengers, Employees and Others Killed or Injured on Railways, 1949-58

NOTE.—Figures for 1919-48 are given in the corresponding tables of previous Year Books beginning with the 1922-23 edition.

¹ Includes postal, express and pullman employees, trespassers and others.
from Apr. 1, 1949.

² Newfoundland included

Accidents tabulated include all those in which railway trains were involved and accidents on railway property. The classification of accidents used for DBS vital statistics treats collisions between motor vehicles and trains as motor vehicle accidents; provincial statistics also class them as motor vehicle accidents and consequently adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor vehicle.

Subsection 4.—The Canadian National Railway System*

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. Its history is presented in a special article published in the 1955 Year Book at pp. 840-847. More detailed information than can be given here is obtainable from DBS annual report *Canadian National Railways* (Catalogue No. 52-201).

Financial Statistics.—The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the company on its formation in 1923 are described in the special article mentioned above. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain

* The Hudson Bay Railway, formerly managed and operated for the Federal Government by the CNR, was absorbed into the Canadian National Railway System on Jan. 1, 1958, to be operated in the same manner as other Canadian Government railway lines. Statistics of the Hudson Bay Railway are therefore included with CNR data for 1958 and subsequent years.

loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also for a term of ten years ending Dec. 31, 1961, the Railway is not obliged to pay interest on \$100,000,000 of its long-term debt. The Government is authorized to buy additional preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced.

The financial details presented in Table 14 are those of the entire Canadian National Railway System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications throughout, and highway transport (rail) operations from 1956. In conformity with the requirements of the Uniform Classification of Accounts, tax accruals and rents have been charged to operating expenses since Jan. 1, 1956.

14.—Total Revenue, Operating Expenses, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System¹, 1949-58

NOTE.—Figures for 1911-25 are given in the 1936 Year Book, p. 660; for 1926-39 in the 1942 Year Book, p. 590; and for 1940-48 in the 1951 edition, p. 731.

Section 2.—Express Companies

Express, which is actually expedited freight carried on passenger trains, is one of the services provided by companies which do not own the means of conveyance but use the facilities of railway companies under contract. The majority of such contracts provide for payment to the railways of a fixed percentage of the gross express revenue.

Express companies are organized under authority of federal legislation and their business concerns the rapid transit of valuable or perishable commodities and animals, the delivery of parcels and the issuing of financial papers, money orders, travellers cheques and letters of credit. Express rates are usually much higher than freight rates and the two services are not normally competitive. Both tariffs are subject to the approval of the Board of Transport Commissioners.

Five express organizations operate in Canada—four Canadian and one American. The Canadian Pacific Express Company is a subsidiary of the Canadian Pacific Railway Company and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Algoma Central and Hudson Bay Railway, the Canadian National Railway System, and the Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency Incorporated of the United States operates over the Canadian sections of United States railways and over the route from Skagway in Alaska to points in Yukon Territory. Operations of the Algoma Central and Hudson Bay Railway express department were reported for the first time in 1957. No statistics are available on the volume of express traffic because much of it consists of parcels and small lots that cannot be classified.

16.—Summary Statistics of Express Companies, 1949-58

NOTE.—Figures for 1911-48 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

Section 3.—Urban Transit Systems

The collection of statistical information on urban transportation systems has been extensively reorganized. Because of the drastic changes made in recent years in types of vehicles used for mass passenger movement in urban centres, the statistical series that began with the financial and operating statistics of electric railways and later included their motor bus and trolley coach lines, became quite inadequate.

Statistics of urban transit operations were previously contained in part in each of three statistical series: the monthly *Transit Report*, and the annual *Electric Railways and Motor Carriers, Freight-Passenger* reports. By 1954 it had become apparent that these reports dealt with four distinct and separate industries—the passenger bus industry, the urban transit industry, the intercity electric railway industry, and the motor carrier-freight industry—and that revision was necessary. As a first step, companies reporting 1954 statistics for the monthly transit report were divided into two groups on the basis of predominant type of operation, i.e., either urban transit or passenger bus (intercity and rural). Companies receiving more than 50 p.c. of their revenue from urban transit operations were defined as "Urban Transit" and those receiving more than 50 p.c. from intercity and rural passenger bus traffic were classified as "Passenger Bus (intercity and rural)". Starting January 1955, separate monthly reports were produced for the urban transit and the passenger bus industries.

During 1955, a similar examination was made of companies reporting statistics for the annual reports *Electric Railways and Motor Carriers, Freight-Passenger*. The former presented data for companies which operated or had at one time operated electric rail lines including urban streetcars, most of which had become strictly urban transit carriers using trolley coaches and motor buses. A new classification of these companies was made, also based on the predominant characteristic of their operations, i.e., either urban transit or electric railway (intercity and rural). Data for the latter group, which numbered five in 1958, are now included in the Railway Transit series of reports; data for the companies whose operations are predominantly urban are included in the monthly and annual series on Urban Transit statistics; and the *Electric Railways* report has been discontinued.

The companies reporting to the Motor Carriers, Freight-Passenger series formerly included those engaged in passenger bus operations, both urban and intercity and rural, as well as freight carriers. The operations of those companies are now being reported in

the Passenger Bus (intercity and rural) series, the Urban Transit series, or the Motor Carriers, Freight series, depending on the predominant characteristic of their operations. Thus, the annual *Urban Transit* report has contained, from 1956, statistics for the industry as a whole, including operations of motor buses, trolley coaches, streetcars and subway cars carrying passengers in urban and suburban service.

PART III.—ROAD TRANSPORT*

Highways and motor vehicles are herein treated as related features of transportation. An introductory section summarizes provincial regulations regarding motor vehicles and motor traffic.

Section 1.—Provincial Motor Vehicle and Traffic Regulations†

NOTE.—It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at p. 826.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized under the following headings.

Operators' Licences.—The operator of a motor vehicle must be over a specified age, usually 16 years (17 in Newfoundland and Quebec, and 18 in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests and renewable annually, except in Alberta and British Columbia where it is renewable every five years, and in New Brunswick and Manitoba where it is renewable every two years. Special licences are required for chauffeurs in all provinces except Newfoundland and in some jurisdictions special licences may be granted to those who have not reached the specified age.

Motor Vehicle Regulations.—In general, all motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back of trailers). In most provinces in event of sale the registration plates stay with the car but in Manitoba and Saskatchewan the plates are retained by the owner. A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is 90 days and British Columbia where it is six months) in any year to visitors' private vehicles registered in another province or a state that grants reciprocal

* Except as otherwise indicated, the material in this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

† The information in this Section has been revised from material provided by the officials in charge of the administration of motor vehicle and traffic Acts and Regulations in the individual provinces and territories.

treatment. Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device.

Traffic Regulations.—In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Quebec and New Brunswick is 60 miles an hour in daytime and 55 at night, in Manitoba and Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highways in Alberta where maximum speeds are 65 in daytime and 55 at night. In Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour. In the other provinces the maximum speed permitted is normally 50 miles an hour. Slower speeds are always required in cities, towns and villages, when passing schools and public playgrounds, at road intersections, railway crossings or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In almost all provinces, truck speed limits are at least five miles an hour below automobile speed limits. In all provinces and territories, accidents resulting in personal injury or property damage of \$100 or more must be reported to a police officer and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Penalties.—Penalties ascend in scale from small fines for minor infractions of any of the regulations to suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting to operate a motor vehicle while intoxicated.

Safety Responsibility Legislation.—Each province and the Yukon Territory has enacted legislation under this heading (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle permit of a person convicted of an offence arising out of a motor vehicle accident, or a person involved directly or indirectly in an accident who is not covered for third-party insurance at the time of the accident. The suspension remains effective until any penalty or judgment has been satisfied and proof of financial responsibility for the future is filed. In Manitoba, Saskatchewan, Alberta, British Columbia, and the Yukon Territory uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of \$100 (\$200 in Saskatchewan and \$250 in British Columbia).

Although safety responsibility legislation has not been enacted in the Northwest Territories, the Motor Vehicle Ordinances there require the owner of a motor vehicle to submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration.

Unsatisfied Judgment Funds.—Legislation has been enacted in all provinces except Quebec and Saskatchewan and in the Territories, usually in the form of an amendment to the motor vehicle laws of the province, providing for the establishment of an Unsatisfied Judgment Fund out of which are paid judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. The Fund is created by the collection annually of an Unsatisfied Judgment Fund fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued, except in British Columbia and in Nova Scotia where the Fund is maintained by insurance companies. This fee does not exceed \$1 per annum except that Ontario collects \$5 from each uninsured owner of a motor vehicle at the time of registration. A feature of this legislation which is contained in some provincial statutes provides for the payment of judgments in the so-called 'hit-and-run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles; any judgment secured against the Registrar is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. In Ontario, Alberta and British Columbia the limits are \$10,000 for

one person and \$20,000 for two or more persons injured in one accident. Ontario and Alberta provide for claims up to \$2,000 for property damage. In Manitoba the legal limits are \$10,000, \$20,000 and \$1,000, respectively, while other provinces retain lower limits of \$5,000, \$10,000 and \$1,000. For hit-and-run accidents, payments are made for personal injuries or death only.

Sources of information of provincial motor vehicle and traffic regulations:—

Newfoundland

Administration.—Deputy Minister of Highways, St. John's.

Legislation.—The Highway Traffic Act, 1951, as amended.

Prince Edward Island

Administration.—The Provincial Secretary, Charlottetown.

Legislation.—The Highway Traffic Act (RSPEI 1951, c. 73).

Nova Scotia

Administration.—Registry of Motor Vehicles, Department of Highways, Halifax.

Legislation.—The Motor Vehicle Act (1954, c. 184) as amended, and the Motor Carrier Act (RSNS 1923, c. 78) as amended.

New Brunswick

Administration.—Motor Vehicle Division, Provincial Tax Branch, Department of Provincial Secretary-Treasurer, Fredericton.

Legislation.—The Motor Vehicle Act (RSNB 1955) as amended.

Quebec

Administration.—Motor Vehicle Service, Provincial Revenue Offices, Parliament Bldgs., Quebec.

Legislation.—The Highway Code (RSQ 1941, c. 142) as amended.

Ontario

Administration.—Ontario Department of Transport, Toronto.

Legislation.—The Highway Traffic Act (RSO 1950, c. 167), the Public Vehicles Act (RSO 1950, c. 322) and the Public Commercial Vehicles Act (RSO 1950, c. 304).

Manitoba

Administration.—Minister of Public Utilities, Winnipeg.

Legislation.—The Highway Traffic Act (RSM 1954, c. 112) as amended.

Saskatchewan

Administration.—Treasury Department, Highway Traffic Board, Revenue Building, Regina.

Legislation.—The Vehicles Act, 1957.

Alberta

Administration and Legislation.—The Vehicles and Highway Traffic Act (RSA 1955, c. 356) and the Motor Vehicles Accident Indemnity Act (RSA 1955, c. 209) are administered by the Motor Vehicle Branch, Department of Highways, Edmonton. The Public Service Vehicles Act (RSA 1955, c. 265) and the Rules and Regulations are administered by virtue of authority vested in the Highway Traffic Board, Department of Highways, Edmonton.

British Columbia

Administration and Legislation.—Enforcement of the Motor Vehicle Act, the Commercial Transport Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces. The Motor Carrier Act is administered by the Public Utilities Commission, the Motor Vehicle Act by the Superintendent of Motor Vehicles and the Commercial Transport Act by the Minister of Commercial Transport, Victoria, B.C.

Yukon Territory

Administration.—Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Registrar of Motor Vehicles, Government of the Yukon Territory, Whitehorse, Y.T.

Legislation.—The Motor Vehicles Ordinance (Revised Ordinances 1958, c. 77) and amendments.

Northwest Territories

Administration.—Commissioner of the Northwest Territories. Address communications to the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

Legislation.—The Motor Vehicles Ordinance (SC 1956, c. 72) as amended.

Section 2.—Highways and Roads

The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1958, the mileage of highways and rural roads in Canada was 401,887. The decrease of 22,052 miles compared with the 1957 total is accounted for by certain exclusions in the later year, as shown in the footnotes to Table 1. The major increase during the year was in bituminous-surfaced highways.

The total of 401,887 miles includes all roads under provincial jurisdiction, federal roads, and local roads under municipal jurisdiction other than the milages in urban centres of more than 1,000 population. The latter are given separately under the heading "Urban Roads", p. 831. Federal roads, including those in the National Parks, the North West Highway System of British Columbia and the Yukon Territory, as well as other federally administered roads in the Yukon and Northwest Territories, totalled 4,217 miles; this figure excludes all Indian reservation roads except those with bituminous surface.

1.—Road Milages classified by Type and by Province, 1957 and 1958

NOTE.—The figures for Canada are the additions of the milages so reported. Urban streets are not included.

¹ Includes 9,914 miles previously included with earth road mileage.

² Excludes 4,690 miles unused road allowance previously included.

³ Excludes 23,305 miles unimproved road allowance previously included.

⁴ Decrease from 1957 due to elimination of duplications in reporting.

⁵ Includes roads in Provincial Parks, forest development and mining roads not included previously.

⁶ Excludes milages of all roads on Indian reservations except those with bituminous surface.

Total expenditures on roads and highways reached a new high in the year ended Mar. 31, 1959, amounting to \$772,748,991, 8 p.c. higher than such expenditures in the previous fiscal year. Output on construction was up 8 p.c. and maintenance costs increased almost 18 p.c. Table 2 shows expenditure by provinces and federal-provincial-municipal distribution of such expenditure for the years ended Mar. 31, 1955-59.

¹ Includes payments from railways and contributions from the Railway Grade Crossing Fund toward elimination of grade crossings, etc., amounting to \$1,237,237 in 1954-55, \$1,116,876 in 1955-56 and \$2,700,155 in 1956-57.

² Includes federal administrative costs *re* Trans-Canada Highway amounting to \$431,002 in 1954-55, \$462,600 in 1955-56, \$168,000 in 1956-57, \$235,000 in 1957-58 and \$242,100 in 1958-59.

³ Includes expenditures of \$1,767,698 by municipalities in Manitoba for which no breakdown is available.

⁴ Includes expenditures of \$2,573,262 by municipalities in Manitoba, of \$14,932,793 by municipalities in Saskatchewan and of \$1,514,533 by the British Columbia Department of Highways for which no breakdown is available.

⁵ Includes expenditures of \$3,091,156 by municipalities in Manitoba for which no breakdown is available.

The Trans-Canada Highway.—The original federal-provincial agreement for construction of the Trans-Canada Highway is given in outline, together with other data on specifications and proposed route across the participating provinces, in the 1951 Year Book, pp. 631-634. Under the Act, which became effective Dec. 10, 1949, agreements covering the Federal Government's participation in the cost of construction were entered into with each of the provinces (except Quebec). The Act set the standards to be met—a hard-surfaced, two-lane highway, 22 to 24 feet wide with ample shoulder widths, bridge clearances and sight distances, low gradients and curvature, a maximum load capacity of nine tons for one axle, and the elimination, wherever possible, of railway grade crossings. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces. Those sections within the National Parks were to be the responsibility of the Federal Government. Federal contribution was to be 50 p.c. of the cost of new construction and up to 50 p.c. of the cost of construction of sections of highway built prior to the passing of the Act, where those sections were properly incorporated in the Trans-Canada Highway. Total Federal Government contribution under this Act was limited to \$150,000,000.

An amendment to the Act in 1956 increased the extent of federal financial participation by providing for an additional 40 p.c. contribution on one-tenth of the highway mileage in each province. The construction period was extended to Dec. 31, 1960 and the aggregate limit of federal funds available for the purpose was increased to \$250,000,000. A second amendment passed in March 1959 added \$100,000,000 to the federal contribution and a third amendment passed in June 1960 raised the total amount of funds available for federal expenditure under the Act and its amendments to \$400,000,000. The 1960 amendment also extended for three years the period in which construction costs might be incurred under the Act.

Under present agreements, a paved highway is to be completed across Canada by May 31, 1964—a highway constructed in conformity with the general specifications laid down in the Act or paved to a satisfactory provincial standard. The latter concession was made to eliminate the need for reconstructing highways already paved in order to speed up the work on other sections. However, federal participation in the cost is limited to that portion constructed to Trans-Canada Highway standards.

In the nine participating provinces* the route as amended in 1959 totalled 4,491 miles. In Newfoundland its extent was 554 miles; in Prince Edward Island 71 miles; Nova Scotia 318 miles; New Brunswick 390 miles; Ontario 1,453 miles; Manitoba 309 miles; Saskatchewan 406 miles; Alberta 282 miles; British Columbia 568 miles; and in the National Parks 140 miles. Revisions in location have since made minor alterations in some mileage totals. For instance, the mileage through Mount Revelstoke and Glacier National Parks in British Columbia was shortened by a change of route, and the mileage in Newfoundland lengthened by 63 miles because of a change of location of Terra Nova, the new National Park. Thus National Park mileage has been altered to 143 miles. The sum of \$12,500,000 was allocated by Parliament for construction of the Highway through the National Parks during the year ended Mar. 31, 1959.

Contractual commitments of the nine participating provinces for new construction on the Highway up to February 1960 amounted to \$540,588,823, of which the federal share, including the additional 40 p.c. under the amended Act, was \$322,852,148. Federal payments to the provinces during this period for prior, interim and new construction totalled \$302,737,183. On-site labour expended on the Highway up to Mar. 31, 1959 was 7,976,220 eight-hour man-days of employment; off-site employment required for the provision of necessary material and services was estimated at 13,559,574 man-days.

In Saskatchewan, work was completed over the whole route of 406 miles in 1957 and the Highway was officially opened and dedicated on Aug. 21 of that year. In provinces more handicapped by problems of terrain and construction, progress was reported: at

* The Provincial Government of Quebec is not a party to a federal-provincial agreement but there is a paved highway across that province linking the two ends of the Trans-Canada Highway route in Ontario and New Brunswick.

Dec. 31, 1959, contracts for 3,290 miles of grading had been approved and the equivalent of 3,045 miles built; contracts for base-course had been approved for 3,000 miles and the equivalent of 2,731 miles completed; paving to specified standards had been completed over a distance of 2,373 miles; 448 bridges, overpasses and other structures of more than 20-foot span had been approved for construction.

Roads to Resources and Roads in the North.—Canada's ranking resources are often the hardest to reach. The richest mineral discoveries do not occur close to the main highways; roads must reach out to them. Access to the most valuable timber stands is almost always provided by roads built expressly for that purpose. The main freshwater fisheries do not operate next door to supermarkets. Indeed, few countries have more to gain from the provision resource roads than Canada.

This was the thinking behind the Roads to Resources program proposed by the Federal Government to the provinces early in 1958. The Federal Government at that time offered to contribute \$7,500,000 to each province for the construction of resource roads if the province would contribute the same amount. The program was not intended at any point to replace a province's normal highway commitments but to assist it with road construction which it otherwise could not undertake. The initiative in proposing routes was to lie with the provinces and they were to be responsible for construction and maintenance. No single time-ceiling was established, since the programs in each province would differ and obviously some would require more time than others. Projects submitted by the provinces were to be studied by the Interdepartmental Roads Appraisal Committee, a small continuing body set up to advise the Minister of Northern Affairs and National Resources. The provinces were keenly interested in the program and all have since signed Roads to Resources agreements and have programs in operation.

Excellent progress was made during 1960 and, by mid-summer, work to the value of more than \$26,000,000 had been done since the beginning of the program. To this amount, each partner concerned—federal and provincial—made equal contribution. The entire program calls for a joint investment of \$150,000,000 which will finance the construction of more than 4,000 miles of road to benefit the mining, forestry and commercial fishing (both inland and sea) industries and tourism. The significance of this mileage is indicated by the realization that if these resource roads were built as a single east-west route, that route would almost link the capital of Newfoundland with the capital of British Columbia.

Concurrently with the Roads to Resources program, the Federal Government is carrying out a Territorial Development Road program in the Yukon and Northwest Territories. These roads, to be constructed through promising resource areas, will link up with and form part of the existing Territorial roads system. The program envisages the construction of more than 1,200 miles of road and a number of bridges at an estimated cost of some \$70,000,000. Such trunk roads through promising areas will provide the travel surfaces over which equipment for resource development, construction workers and settlers will pass. Most of them are to be financed entirely by the Federal Government although the Territorial Governments will pay a share of the maintenance costs. However, where an access road leads from a development road to link up with an individual mine or other similar type of company operation, its cost may be shared by the Government and the company. The development roads are primarily designed to reach new mineral sources, particularly oil and gas.

Although two programs, Roads to Resources and Territorial Development Roads, are distinct—their location and method of financing make this clear—they are nevertheless related. In the western provinces most roads to be built under the first program will lie within, or head towards, the northern part of the province and so towards the 60th parallel of latitude. The Territorial program has been planned so that, in time, the new roads being built in the North will connect with the resource roads in the provinces.

An example already exists at the Alberta-Northwest Territories boundary. Here the provincial highway from Grimshaw, being improved as part of Alberta's Roads to Resources program, meets the federal Mackenzie Highway and forms one continuous road into the Northwest Territories.

The most important single project in the Northwest Territories is the extension of the Mackenzie Highway some 280 miles around the west end of Great Slave Lake to Yellowknife. This will give access to the highly mineralized area around Great Slave Lake and provide, as well, an overland route to Yellowknife. In the Yukon, development roads will give improved access to mineralized areas including access to the Eagle Plain oil reservation where a major oil discovery was made in 1959 and large-scale exploration is being conducted.

Urban Roads.—Information on urban roads is obtained from urban authorities in places with populations of over 1,000. Brief statistical data are given in Table 3; more detail may be obtained from DBS annual report *Road and Street Mileage and Expenditure* (Catalogue No. 53-201).

3.—Statistics of Urban Roadways, 1956-58

Section 3.—Motor Vehicles

Registration.—Motor vehicle registrations continue to increase year by year, reaching a record of 4,719,474 in 1958 compared with 4,497,091 in 1957 and 2,034,943 in 1948. Of the total in 1958, 3,572,963 were for passenger cars—one for every five Canadians. Registrations by province are given in Table 4 and types of vehicles registered by province in Table 5.

4.—Motor Vehicles Registered, by Province, 1949-58

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-48 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

Provincial Government Revenue from Motor Vehicles.—The taxation of motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1958 the average cost per motor vehicle for operating taxes and licences was about \$107. Lower gasoline tax rates in the five provinces from Ontario westward brought the averages for those provinces below the national average. Present gasoline tax rates range from one cent per gallon in the North-west Territories to 17 cents in Newfoundland and Nova Scotia.

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Federal Government revenue from import duties, excise and sales taxes are given in Chapter XXII on Public Finance.

¹ Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws. ² Included with trucks. ³ Included with other motor vehicles. ⁴ Included with miscellaneous revenues and therefore in total. ⁵ Included with passenger automobiles.

Sales of Gasoline.—Gasoline and diesel oil used as fuel in internal combustion engines are taxed when used by motor vehicles on highways. In some provinces they are taxed when used for other purposes. Liquefied petroleum gas when used in motor buses and trucks is considered as "gasoline". The consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 4.0 p.c. to 2,732,000,000 gal. in 1958. All provinces showed increases. Sales by province are shown in Table 8. Net sales are calculated by deducting from the gross sales (1) tax-exempt sales, (2) gasoline on which refunds have been paid, and (3) exports.

Motor Carriers—Freight.*—Statistics of the common carrier segment of the intercity and rural motor carrier industry have been collected since 1941. However, as little capital is required to enter the trucking business, many marginal operators are associated with the industry and the large turnover and numerous changes each year have created many problems in the collection of statistics; these are gradually being overcome. Statistics of contract carriers were collected for the first time in 1958. The 3,510 common carrier firms from which usable returns were secured in 1958 reported gross operating revenues of \$292,719,406 compared with 2,062 firms reporting \$259,056,237 in 1957. Usable returns for contract carriers reported a gross operating revenue of \$59,361,113.

Both groups of the motor carrier freight industry are divided into four classes based on gross annual revenue. Operators of vehicle fleets owned and operated by private companies, where the vehicles are not available for public service, such as dairies, bakeries, departmental and grocery stores, oil and gasoline distributors and breweries, are excluded.

* Statistics are given in more detail in DBS annual report *Motor Carriers—Freight* (Catalogue No. 53-205).

Passenger Buses.*—As explained on p. 822, since 1956 the operations of motor carrier companies predominantly engaged in passenger bus service have been given separately; they are summarized in Tables 11 and 12. Data refer to the for-hire segment of the industry and only those firms engaged in intercity and rural operations and having an annual gross revenue exceeding \$6,000 are covered. Operators predominantly involved in the provision of charter or school bus service are not included.

* Statistics are given in more detail in DBS monthly and annual reports *Passenger Bus Statistics* (Catalogue No. 53-216).

Motor Transport Traffic.*—Surveys of motor transport traffic have been conducted in all provinces on a continuing basis since 1957 by means of random samples of vehicles selected from provincial registration records. Approximately 3 p.c. of total registrations were sampled for surveys of truck operations during each quarter of 1958. Commencing with the second quarter of that year, each quarterly sample was spread over three survey weeks with one-third of the sample being used for a seven-day period (Sunday through Saturday) per month.

Excluding vehicles that do not perform normal transportation services, such as cranes, tow trucks, road building equipment, etc., the average number of trucks licensed in Canada during the year 1958 was 862,775. Of these, 5.9 p.c. were for-hire carriers, 23.8 p.c. were private intercity trucks, 35.9 p.c. were private trucks operated predominantly within urban areas, and 34.4 p.c. were farm trucks. One-third of the total number were registered in Ontario and one-half were registered in the two provinces of Ontario and Quebec.

13.—Average Truck Population, by Type of Operation and Province, 1958

Type of Operation	Atlantic Provinces	Quebec	Ontario	Manitoba	Saskat- chewan	Alberta	British Columbia	Canada
	No.	No.	No.	No.	No.	No.	No.	No.
For-hire.....	2,523	13,461	16,763	1,329	1,685	9,441	5,301	50,503

Totals.....	68,890	153,465	280,302	54,728	100,970	114,544	89,876	862,775

Canadian registered trucks travelled 6,616,000,000 miles in Canada during the year, of which mileage 20 p.c. was accounted for by for-hire trucks, 33 p.c. by private intercity vehicles, 32 p.c. by urban trucks and 15 p.c. by farm trucks, the most numerous of all vehicles.

For-hire trucks averaged 184,700 net ton-miles per vehicle and, although amounting to only 5.9 p.c. of total registrations, they accounted for 60 p.c. of the total net ton-miles performed by all commercial trucks in Canada, a result of the comparatively high average yearly mileage of for-hire trucks and also of the heavier average load carried (9.9 tons as compared with an average of 4.7 tons for all trucks). The predominance of heavier vehicles in the for-hire group also explains the low mileage per gallon of gasoline of 6.3 as compared with an average of 9.7 for all vehicles.

* Statistics are given in more detail in DBS annual reports *Motor Transport Traffic Statistics* for Canada and the provinces (Catalogue Nos. 53-207—53-214).

Motor Vehicle Accidents.—Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. Statistics on all deaths from motor vehicle accidents are shown in Table 15. A direct comparison of such statistics between the provinces is of little value because of differences in size, population, motor vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor vehicles has been tabulated. These data still give no weight to differences in use of motor vehicles, variations in climate, road conditions, tourist cars, etc., all of which are factors in accidents.

Data presented in Table 16 relate to traffic accidents only and consequently may not be compared with figures of Table 15 which include details of fatalities occurring elsewhere than on public streets or roads.

15.—Deaths Resulting from Motor Vehicle Traffic and Non-traffic Accidents, by Province, 1949-58

NOTE.—Figures for 1926-48 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

PART IV.—WATER TRANSPORT*

The Canada Shipping Act.—Legislation regarding all phases of shipping is consolidated in the Canada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

Section 1.—Shipping Facilities and Traffic

Subsection 1.—Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that the commerce of Canada is not dependent entirely upon Canadian shipping. However a large part of the inland and coastal traffic is carried in ships of Canadian registry.

Canadian Registry.—Under Part I of the Canada Shipping Act all ships in excess of 15 tons net register are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 hp. or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate established under and subject to the laws of some part of Her Majesty's Dominions and having their principal place of business in those Dominions. Under the British Commonwealth Merchant Shipping Agreement all Commonwealth ships are given the general designation 'British Ship'; and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping.

* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services by the Department of Transport and the National Harbours Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Canadian Maritime Commission; and canal traffic and statistics of shipping by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

1.—Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1957-59

NOTE.—Figures for 1935-56 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

¹ Includes N.W.T.—see footnote 2. ² Aklavik, N.W.T., closed as a port of registry Dec. 12, 1958. Ships using the Mackenzie River System registered at Edmonton, Alta.

Shipping Traffic.—Before 1952 the only information available on shipping activity in Canada was the number and registered net tonnage of vessels operating in and out of Canadian customs ports and the tonnage of cargoes loaded and unloaded at these ports destined for or arriving from foreign countries. In 1952 the coastwise movement of cargo in and out of customs ports was reported for the first time and in January 1957 the coverage was extended to include tonnage of vessels and tons of cargo in and out of non-customs ports. Reports are not required for vessels of less than 15 registered net tons.

2.—Vessels Entered at Canadian Ports, 1949-58

NOTE.—Exclusive of passenger service. Figures for 1929-48 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

The freight movement through a large port takes a number of different forms. The overseas movement of freight loaded on and unloaded from sea-going vessels frequently constitutes a surprisingly small part of the total. Usually the volume from coasting vessels is larger. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume.

Since 1957, shipping statistics are available covering traffic in and out of both customs and non-customs ports. Table 5 shows the principal commodities loaded and unloaded in foreign and coastwise trade at the seven ports handling the largest cargo volumes in 1958.

5.—Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Ports Handling the Largest Tonnages in 1958

NOTE.—Only commodities totalling over 50,000 tons are listed.

Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil and grain. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, dry dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours that are under the direct supervision of the Department of Transport. These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 131 of these harbours, their remuneration being paid from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the operating authorities, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil and sugar industries. At several of the ports there are also dry docks, as shown in Table 7.

National Harbours Board.—The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Trois Rivières, Montreal, Vancouver, and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal. These facilities represent a capital investment of approximately \$280,000,000. Current operating revenues and expenditures are given in Table 28, p. 868.

6.—Facilities of the Larger Harbours Administered by the National Harbours Board, as at Dec. 31, 1958

NOTE.—The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

Dry Docks.—The Department of Public Works of the Federal Government owns five dry docks—one at Kingston, Ont., two at Lauzon, Que., and two at Esquimalt, B.C.—and operates three with the one at Kingston under lease to and operated by the Canadian Shipbuilding and Engineering Company of Kingston and the old Esquimalt dry dock operated by the Department of National Defence as HMC Dockyard. Each of the large dry docks at Lauzon and Esquimalt can be divided for use of small vessels; the larger Lauzon dock cost approximately \$4,500,000 and the larger Esquimalt dock approximately \$7,000,000.

⁴ Over sill (H.W.).

Subsection 3.—Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport together with those under the jurisdiction of the St. Lawrence Seaway Authority comprise a series of waterways providing navigation for 1,875 miles inland from salt water.

The canals included under the two classifications—Seaway Canals and Department of Transport Canals—are listed in Table 9 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrews Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1958, 35,096,587 tons of freight and 27,451 vessels passed through the canals as compared with 37,230,349 tons of freight and 29,436 vessels during 1957. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1958 carried 139,729 passengers as compared with 96,360 in 1957.

Revenue from canals during the year ended Mar. 31, 1959 amounted to \$1,654,014, of which \$1,098,935 was derived from rentals for hydraulic and land privileges and wharfage; in the previous fiscal year the total revenue was \$1,984,717 with rentals and wharfage amounting to \$1,444,296.

9.—Lengths of Channels and Dimensions of Locks under the Control of the St. Lawrence Seaway Authority or the Department of Transport

¹ Figures for the United States include small amounts of traffic from other foreign countries.

The figures in Tables 12 and 13 include duplications where the same freight passes through two or more canals, but in Table 14 duplications in the traffic passing through the St. Lawrence and Welland Ship canals and the Canadian lock at Sault Ste. Marie have been eliminated wherever possible.

Grain trans-shipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne, Ont., or other trans-shipping port.

14.—St. Lawrence-Great Lakes Traffic using St. Lawrence, Welland Ship and Sault Ste. Marie Canals, 1958

Canals Used	Up-bound Freight	Down-bound Freight	Total
	tons	tons	tons
Traffic using Canadian St. Lawrence-Great Lakes System	7,175,034	20,214,574	27,389,608
St. Lawrence only	1,930,876	3,363,611	5,294,487
St. Lawrence and Welland Ship	2,691,046	3,459,443	6,150,489
St. Lawrence, Welland Ship and Sault Ste. Marie	33,971	78,819	112,790
Welland Ship only	2,205,943	12,510,028	14,715,971
Welland Ship and Sault Ste. Marie	74,627	220,317	294,944
Sault Ste. Marie only	238,571	582,356	820,927
Traffic using United States Locks at Sault Ste. Marie only	9,285,342	66,167,510	75,452,852
Totals	16,460,376	86,382,084	102,842,460

Traffic through the Sault Ste. Marie canals, Canadian and American, has fluctuated from a high of 128,489,000 tons reached in 1953 to 111,792,000 tons in 1957 and 76,684,000 tons in 1958. The dominant traffic from a tonnage aspect is iron ore which also reached its highest point in 1953 at 98,657,591 tons, decreasing to 86,509,714 tons in 1957 and to 54,188,010 tons in 1958. Soft coal has usually been second in volume to iron ore, increasing from 8,676,297 tons during the 1949 season to 13,301,048 tons in 1950; volume in recent years amounted to 9,053,769 tons in 1955, 10,238,048 tons in 1956, 8,970,640 tons in 1957 and 6,388,803 tons in 1958. Although wheat is generally third in tonnage, in 1958 it was in second place with a volume of 6,615,540 tons. Its value over the past quarter-century has been generally higher than that of either iron ore or coal. Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

Canadian use of the Panama Canal.—The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor importance. Of the total of 4,574,336 long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1959 and passing through the Panama Canal, only 25,974 long tons were destined for Eastern Canadian ports. Similarly, of the 282,206 long tons of cargo leaving Eastern Canadian ports and passing through the Panama Canal, 49,336 long tons were destined for Western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 523,174 long tons in the year ended June 30, 1959; the total from any origin arriving at Eastern Canadian ports after having passed through the Panama Canal was 317,302 long tons.

Subsection 4.—The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in previous Year Books, beginning with the 1954 edition. Also a special article carried in the 1956 Year Book (pp. 821-829) gives detailed information on Great Lakes-St. Lawrence waterway traffic immediately prior to the beginning of construction on the new project. The following article brings up to date the story of the Seaway after its first year of operation.

THE ST. LAWRENCE SEAWAY IN OPERATION*

The St. Lawrence Seaway has been described as the "master project of the North Atlantic Continent" and, indeed, it constitutes a transportation asset that may advance more notably than any other factor the economic integration of the mid-Continent region. With the deepening of the St. Lawrence River channels, larger ships with deeper draughts may ply into the heart of the Continent and smaller ships that were previously able to negotiate the river may now save eight to ten hours of time in their passage from Montreal

* Prepared by Dr. S. Judek, University of Ottawa. Statistical data were obtained from DBS annual report *Canal Statistics; Annual Report of the Lake Carriers' Association, 1959*; and *Annual Report of the St. Lawrence Seaway Authority, 1959*.

to Lake Ontario. Thus is increased the river's vital role of providing low-cost water transportation so essential to the economic development of Canada, enlarging the industrial areas of the east and stimulating the primary producing areas of the west. By connecting the oceans of the world with the rich industrial, agricultural, mineral and forested areas of North America, the enlarged waterway will increase Canada's ability to compete in overseas markets and also facilitate trade and foster closer economic relations between Canada and the United States. It is fortunate that both countries have a mutual interest in the Seaway as a common highway and transportation outlet for the industries and trades located in their respective territories.

The Seaway is a lasting monument to Canadian and American engineering skill and enterprise. The very magnitude of the project is well illustrated by the following facts: more than 140 separate major construction contracts were made; the project required excavation of 51,000,000 cu. yards of earth and the removing of another 18,000,000 cu. yards in dredging operations; more than 2,000,000 cu. yards of cement were mixed from 10,000,000 bags of dry cement; 58,000 tons of steel were used; the project provided at one time or another employment for nearly 61,000 persons whose earnings benefited various trades and towns along the St. Lawrence River; the total cost amounted to \$470,000,000 of which Canada's share was \$330,000,000; the relocation of towns required the evacuation of about 6,500 people and required an expenditure of \$30,000,000. The major part of the construction work, initiated in 1954, was completed by the spring of 1959 and the St. Lawrence Seaway was opened to commercial traffic on Apr. 25 of that year; the official opening by Her Majesty Queen Elizabeth II and President Eisenhower of the United States took place on June 26, 1959.

A number of factors contributed to the early difficulties encountered in the first year of operation of the Seaway. Lack of proper equipment on some foreign ships, unfamiliarity with procedures, inadequate loading and unloading equipment, an insufficient number of qualified pilots to ensure smooth flow of traffic, etc., delayed ships in their passage through the canals, particularly through the Welland Canal, and the cost of having a ship idle amounted to from \$1,000 to \$3,000 per day. However, these difficulties are gradually disappearing and, in time, ship operators will be able to maintain service on schedule.

The impact of the Seaway on other means of transportation and on the over-all national economy will become clearer as time progresses. It is believed that the immediate effects will cause some loss of traffic and revenue to the railways but that, in the long run, the industrial expansion and larger markets resulting from the enlarged waterway will more than compensate for the short-run loss. It is also likely that long-haul truck traffic will experience some reduction but that short-haul truck traffic will suffer no adverse effects. Although the potential volume of Seaway trade and the growing obsolescence of the present Canadian inland merchant fleet will ultimately require the addition of new and modern ships, it is not generally expected that the Seaway will have any perceptibly beneficial effect on the Canadian shipbuilding industry. A few new vessels for Seaway trade have been constructed and the building of additional large lakers, not designed to be ocean-going should provide some work for Canadian shipyards in the future. Work has already resulted from the conversion of small canallers into larger lake ships, though further conversion is unlikely. The volume of ship-repair business will depend on the number of inland merchant vessels using it, including perhaps foreign ships, but there will likely be little repair work with respect to foreign ocean-going ships because of the high cost of such work at Canadian shipyards.

Historical Background.—The Great Lakes-St. Lawrence waterway is a natural westward extension of the important North Atlantic sailing route, carrying it some 2,300 miles into the middle of the North American Continent. The Seaway proper extends from Montreal to Lake Erie and includes the Welland Ship Canal which bypasses Niagara Falls between Lakes Ontario and Erie. The first canal system and locks built to overcome natural barriers to navigation in the St. Lawrence River and in the waters connecting the Great Lakes were completed in 1700. By the middle of the 1800's, nine-foot canals had been completed in Canada and by 1900 the regulating depth was 14 feet.

The first co-operative action of the Governments of Canada and the United States leading towards the Seaway development may be said to date at least as far back as 1905. At that time, a Joint International Waterways Commission was established to deal with all matters pertaining to international waters between the two countries. In 1921 this Commission recommended a treaty for a joint project from Montreal to Lake Erie to deepen the waterway. Both countries signed the St. Lawrence Deep Waterway Treaty in 1932 but two years later it was rejected by the United States Senate. In 1938 attempts were made to negotiate a new treaty, without success. The wartime need for power led to the Great Lakes-St. Lawrence Basin Agreement of 1941 but it, too, failed to receive the ratification of the United States Congress. Then in 1951 an agreement was reached between the Federal Government of Canada and the Provincial Government of Ontario, which provided for the construction of the Seaway by the Federal Government and for the development of power in the International Rapids Section by The Hydro-Electric Power Commission of Ontario and a United States agency to be designated later. In 1952 Canada and the United States concluded an agreement on power development and Canada expressed the intention to go alone in developing navigation facilities on the Canadian side of the St. Lawrence River between Montreal and Lake Erie to provide for 27-foot depth. In 1953 the United States Supreme Court confirmed the previous action of the Federal Power Commission in granting a licence to the Power Authority of New York State, which decision made American co-operation possible. Meanwhile, however, the United States Congress enacted the Wiley-Dondero Act authorizing and directing the Saint Lawrence Seaway Development Corporation to join the St. Lawrence Seaway Authority, established in Canada in 1951, in constructing on United States territory all the navigation facilities necessary in the International Rapids Section of the River.

At last the imaginative and creative aspirations of generations in both Canada and the United States had been translated into action—no doubt the future will justify the wisdom of this decision and prove its economic value to both countries.

Waterway Service and Transport Facilities.—The St. Lawrence Seaway involves a total decline of about 600 feet. From the water level of Lake Superior, the Great Lakes-St. Lawrence inland waterway falls to sea level in five steps: (1) St. Mary's River between Lakes Superior and Huron, with a drop of 21 feet; (2) the St. Clair-Detroit passage joining Lake Huron and Lake Erie, with a drop of eight feet; (3) the Welland Canal from Lake Erie to Lake Ontario, with a drop of 326 feet; (4) the upper St. Lawrence River from Lake Ontario to Montreal, with a drop of 225 feet; and (5) the long passage from Montreal to the sea, with a drop of 20 feet. The eastern section of the route is the deep-water section from Montreal to the sea, including the St. Lawrence Ship Channel extending from Montreal to 30 miles below Quebec City. Canadian Government dredges maintain this channel at a depth of 35 feet and it has been widened and straightened to provide for increased traffic with the completion of the Seaway. The Seaway lies entirely in Canada except for a stretch of 47 miles in the International Rapids Section—from Cornwall to Iroquois—and a stretch in the Thousand Islands.

Navigation facilities have been improved by the elimination of the 14-foot canal bottleneck that existed between Montreal and Prescott and the provision of a channel of minimum 27-foot depth. Six St. Lawrence canals with 22 locks have been replaced by four canals with seven large locks—two of them in the United States across from Cornwall—which lift and lower vessels about 225 feet to and from Lake Ontario. The Welland Ship Canal, 27 miles in length, has been deepened from 25 to 27 feet. The old narrow and shallow canals allowed, on the average, ships to carry up to 3,000 tons only, as compared with the new capacity of 25,000 tons of bulk cargo in a modern lake carrier. Ocean-going ships may carry a maximum of about 10,000 tons.

St. Lambert Lock, at the southern end of the Victoria Bridge, lifts ships some 15 feet from the level of Montreal harbour to the level of Laprairie Basin in an 8½-mile-long channel. The Côte Ste. Catharine Lock lifts ships from the level of Laprairie Basin 30 feet to the level of Lake St. Louis. The Seaway allows ships to bypass the Lachine Rapids on the

other side of which the channel extends $7\frac{1}{2}$ miles before reaching Lake St. Louis. Then the Lower Beauharnois Lock at the west end of Lake St. Louis allows the bypassing of the Beauharnois Power House and lifts the ships 41 feet so that they may pass through a short canal to the Upper Beauharnois Lock, where they are again lifted 41 feet to reach the level of Lake St. Francis. After about 13 miles in the Beauharnois Canal, ships enter Lake St. Francis. Up to that point the building of all locks and the deepening of all channels were Canada's responsibility. Traffic moving westward then passes through two United States locks—the Snel Lock lifts ships 45 feet into the Wiley-Dondero Canal (10 miles long) and the Eisenhower Lock lifts them another 38 feet into Lake St. Lawrence. At the western end of this lake, Canada has built Iroquois Lock to allow ships to bypass the Iroquois Control Dam. After navigating the channel through the Thousand Islands to Lake Ontario, ships passing through a series of locks from Port Weller on the latter lake to Port Colborne on Lake Erie, a stretch of 27 miles, are raised 326 feet to the level of Lake Erie by way of the Welland Ship Canal. The usable length of the locks is 768 feet, the width 80 feet and the depth over sills, 30 feet.

Canadian Inland Shipping.—The number of Canadian flag vessels of 1,000 or more gross tons operating on the upper lakes and through the St. Lawrence canals in December 1959 was as follows:—

<i>Type of Vessel</i>	<i>No.</i>	<i>Gross Tonnage</i>	<i>Deadweight Tonnage</i>
Dry Cargo—			
Bulk freighters			
Iron ore.....	58	464,992	689,350
Self-unloaders.....	12	42,282	51,550
Mixed trades.....	124	273,804	405,850
Mixed barges.....	9	27,442	47,700
Package freighters.....	20	55,009	73,500
Tankers.....	41	80,681	117,995
Car Ferries.....	1	1,052	...
Passenger.....	5	13,080	...
TOTALS.....	270	958,342	1,385,945

It is commonly held that the dry bulk cargo ships, because of their special design and large carrying capacity, provide the lowest ton-mile transportation cost. The dead-weight capacity of the more recent additions to the fleet ranges from 5,000 to 25,000 tons. With the exception of self-unloaders, which carry their own cargo loading equipment, these ships rely on loading and unloading facilities at the ports. Package freighters carry a wide range of general merchandise including such commodities as farm equipment, automobiles and parts, hardware and electrical equipment and such package freight is of high value in proportion to its size and weight. These vessels usually run on regular schedules; they are faster than bulk carriers and a few carry passengers. Rates charged for package freight are under the control of the Board of Transport Commissioners. The small canallers, the majority of which are bulk dry cargo carriers, are gradually disappearing or are being converted into larger boats; they carry grain and other bulk cargo such as iron ore, coal, sulphur, pulpwood, etc.

The bulk carriers—which are mainly confined to the Great Lakes although they have great lifting capacity because of their relatively shallow draft—cannot operate much beyond Sept Îles but are better suited to ply in the St. Lawrence Seaway than the ocean-going freighters. The small ocean freighters that plied the old 14-foot canals are managing well enough but larger ocean freighters have encountered some difficulties. Having high superstructures, they are easily shifted by the wind and in narrow canals and locks have moved slowly and delayed other ships. In contrast, the lakers lie low and are not exposed to the winds and buffeted against the sides of a lock. Ocean-going vessels must carry only a light load when navigating the Seaway, and it has been estimated that the cost for an ocean-going ship to carry a load only to a 24-foot-six-inch draft (the Seaway maximum) is 25 p.c. higher than if the vessel were fully loaded for operations on the high seas.

It would seem that these initial difficulties will discourage larger ocean-going ships from using the Seaway and thus the waterway should become primarily the domain of inland shipping. This would imply that the Seaway will be used by the large lakers, dominated by grain and ore carriers, between lake ports and the St. Lawrence River ports and most of the large ocean freighters will discharge and take on their cargoes at or below Montreal. It is doubtful whether a ship can be designed combining the seaworthiness of ocean vessels and some of the capacity features of lakers to serve equally well in both ocean and inland waters.

In postwar years direct trade through the Great Lakes to overseas countries has shown a steady increase and this trend will probably continue despite the disadvantages encountered by ocean ships. Before the opening of the Seaway there were 17 shipping lines operating regular ocean services on this route, although most of them were of an experimental nature. In 1959 at least 17 countries took part in direct trade either with Canada or the United States through the St. Lawrence Seaway. In the bulk trade, cargoes transported in vessels other than Canadian or American totalled over 4,000,000 net tons and, in general and mixed cargo trade, foreign ships carried nearly 2,400,000 net tons. Apart from grain, the freight included manufactured goods such as iron and steel products, automobiles, electrical goods, glass, chemicals and clay and earthenware products.

Port Facilities.—Efficient and economical water transportation depends to a large degree on port and harbour facilities, such as docks, wharves, grain elevators, warehouses, loading and unloading equipment, railway connections, drydock accommodations, etc. Port facilities in the Great Lakes prior to the opening of the Seaway were, on the whole, adequate for the then-existing traffic. But the opening of the Seaway is probably the most significant factor in the economic development of the lake ports and, as traffic will be increasing steadily in volume, every major city on the lakes will attempt to improve its port facilities through a publicly financed program. The principal task of the ports is to change from local, industrial and bulk commodity ports to international, commercial ports dealing with a wide variety of goods, a task that must be accomplished within the next decade. Also co-operation among the lake ports is required in such matters as channel dredging, service rulings, priorities on lockages to be accorded foreign ships, etc.

Great Lakes ports which formerly specialized in trans-shipping grain and other bulk cargoes between lakers and canallers have lost their importance. Direct through-traffic from the Lakehead to St. Lawrence ports has had adverse effects on grain elevator business in Kingston, Collingwood, Goderich, Midland and Owen Sound ports. On the other hand, since the opening of the Seaway all transit sheds, open berths and other facilities at Montreal have been used to capacity. That port has 131 berths for ocean ships and over 30 transit sheds; the storage capacity of the grain elevators is nearly 17,000,000 bu. and grain can be loaded at 28 berths. Plans are ready for a new elevator of 5,300,000-bu. capacity. Montreal, being a midway point between the mouth of the St. Lawrence River and the Great Lakes, has served as a terminus for both ocean and Great Lakes navigation.

Toronto harbour facilities have been extended by a new modern terminal and a 50-ton lift; dredging operations to permit the docking of deepsea vessels and lakers have been completed. With growing business, it is planned to provide additional terminals, to construct an outer harbour and to install heavy lift equipment in the port. Grain elevators have a capacity of 4,000,000 bu.

It may be that increasing volume of business will develop Hamilton as an important inland port. Dredging is being carried out to provide 27-foot Seaway depth to selected wharves and to make Hamilton a deep-draft harbour. More extensive port facilities are being provided in terms of warehouses, berthing facilities, etc.

Windsor is also an important international port with a strong industrial background. No work is necessary to open this harbour to deep-draft ships since there is enough depth from Amherstburg Canal up the Detroit River to Lake St. Clair. Grain elevators here have a capacity of 1,250,000 bu. In Sarnia the main problem is to provide adequate facilities for larger vessels. The docking facilities require extension and plans are ready

for the construction of two piers in anticipation of heavier traffic. Two new warehouses have been constructed.

It is argued that the main difficulty in developing Kingston as a Seaway port results from the fact that the north channel, immediately outside the harbour, has a depth of only 16 feet and beyond that the river bed is of solid rock. The present small dock is being lengthened and there are dry dock facilities which could be improved for larger ships. Cornwall is planning a deep-water harbour to serve local industries which will accommodate the larger Seaway ships.

Port Arthur and Fort William, the twin ports at the head of the Lakes, have immediate plans for a new general cargo terminal for ocean and lake ships, for greater grain storage, for more dredging and for modernized iron-ore shipping facilities. There are ship-repairing facilities at these harbours and their present grain elevator capacity amounts to over 90,000,000 bu.

In addition to the grain-elevator capacities of the ports mentioned, there are also elevator storage spaces in the following St. Lawrence ports: Sorel, 3,000,000 bu.; Trois Rivières, 7,000,000 bu.; Quebec City, 4,000,000 bu. and Baie Comeau (opened July 1960), 11,868,000 bu.

Freight Traffic and Commodity Movements.—Most of the freight traffic on the Great Lakes consists of bulk shipments of commodities. The following figures show the increase since 1900 in the movement of the four most important commodities:—

<u>Year</u>	<u>Net Tons</u>	<u>Year</u>	<u>Net Tons</u>
1900.....	35,297,624	1940.....	145,216,410
1910.....	80,014,561	1950.....	177,952,946
1920.....	106,518,531	1953.....	199,696,932
1930.....	112,528,927	1959.....	144,622,380

These shipments reached a record level in 1953. Of the 144,600,000 tons shipped in 1959, about 51,500,000 tons (35.6 p.c.) were iron ore, 47,300,000 tons (32.7 p.c.) coal, 13,600,000 tons (9.4 p.c.) grain, and 26,200,000 tons (18.1 p.c.) limestone. An indication of the movements of these and other commodities in 1958 and 1959 is shown in the following statement of freight movements through the canals in the Great Lakes and the St. Lawrence River. They include all traffic passing through the canals, that is, traffic to and from all Canadian and American ports in vessels wherever registered. They exclude, however, shipments that do not pass through any of the canals—for instance, most of the limestone shipped on the Great Lakes to the steel industries does not pass through the canals and much of the soft coal from Lake Erie goes to other ports on the Great Lakes between the Welland and Sault Ste. Marie canals.

¹Including United States locks.

The total cargo passing through the three canal systems amounted to 109,800,000 tons in 1958 and 119,630,000 tons in 1959 as compared with the record reached in 1953 of about 145,000,000 tons. During 1959 approximately 88,170,000 tons moved eastward and 31,460,000 tons westward. Freight traffic on the Welland Canal was 6,230,000 tons or 29.3 p.c. higher than in 1958 and on the St. Lawrence canals 9,450,000 tons or 80.3 p.c. higher. The major increases occurred in the movement of iron ore and agricultural products.

On the other hand, traffic passing through the Sault Ste. Marie canals in 1959 was 5,830,000 tons, 7.6 p.c. lower than in 1958. A striking feature of the freight traffic picture is the volume passing through the latter canals compared with that going down river through the St. Lawrence canals, emphasizing again the difference in the amount of traffic on the Great Lakes compared with that on the St. Lawrence. Most of the traffic at Sault Ste. Marie passes through the four United States locks—of the total traffic of 70,920,000 net tons in 1959 only 1,230,000 tons passed through the Canadian lock. Noteworthy also is the predominance of iron ore shipments which amounted to more than the shipments of all other products through the Sault Ste. Marie canals. Coal and agricultural products, the latter mainly Canadian, accounted for more than 82 p.c. of the remaining traffic.

About 8,500,000 tons of the 27,500,000 tons of through and way traffic on the Welland Canal in 1959 passed from United States ports to Canadian ports. Soft coal (4,600,000 tons) and iron ore (1,800,000 tons) were the main items. Canadian coastal shipments accounted for nearly 6,700,000 tons, of which 4,380,000 tons were grain, and United States coastal trade for about 1,000,000 tons. Canadian shipments to the United States totalled 6,800,000 tons of which iron ore (5,260,000 tons) and newsprint and wood pulp (440,000 tons) were the main items. American overseas freight traffic amounted to about 3,500,000 tons and Canadian to about 550,000 tons.

Of the total traffic of 21,220,000 tons passing through the St. Lawrence canals in 1959, Canadian coastal trade accounted for nearly 8,100,000 tons of which grain from the Prairie Provinces made up nearly 3,800,000 tons, iron ore 1,280,000 tons, and petroleum and gasoline 810,000 tons. Canadian freight traffic to the United States accounted for 5,660,000 tons of which the largest item was iron ore (4,980,000 tons). American freight traffic to Canadian ports amounted to 1,760,000 tons of which soft coal (730,000 tons) was the principal commodity. About 900,000 tons were direct overseas shipments from Canada and a small amount moved in United States coastal trade. A great portion of the remaining freight traffic was United States overseas trade.

Agricultural products such as wheat, barley, corn, rye, flaxseed, flour and other mill products are the most important group of Canadian commodities moving by way of the St. Lawrence system from the Prairie Provinces to eastern parts of the country for domestic and export markets. The downbound movement of corn through the Welland and St. Lawrence canals comes from western Ontario and the United States. There is only light traffic in flour through any of the canals since this commodity is usually moved by rail.

Until the opening of the Seaway the only grain-carrying vessels reaching Montreal and Quebec were canallers with 100,000-bu. capacity but the Seaway now permits the passage of large upper lakere carrying about 800,000 bu. As a consequence, unloading facilities designed for canallers have required modification. The National Harbours Board in 1959 built eight special plants (six at Montreal and two at Quebec City) incorporating the belt-and-bucket elevator which dredges grain out of the hold and pneumatic equipment which sucks up the grain. These new plants give close to a 50-p.c. higher unloading rate (each has a rated maximum capacity of 27,000 bu. per hour) using only about half as many men as the standard type.

In July 1960 a new grain terminal was placed in operation at Baie Comeau on Quebec's north shore where ships carrying wheat from the Great Lakes may unload and pick up iron ore for the return trip. This, Canada's newest shipping centre, has an elevator capacity of 11,868,000 bu.; loading is accomplished by means of twin high-speed belts from the warehouse to 12 overhead spouts which drop grain into the ships at the rate of 100,000 bu.

hourly. The construction of this facility is expected to provide a new stimulus for the efficient movement of grain from lake ports and at the same time give ocean ships a more convenient year-round source of grain cargo.

Thus the Seaway and its facilities will likely improve the competitive position of Canadian grain in overseas markets. Although ocean-going ships may now go directly to Lakehead ports and take on grain for transfer overseas, most of the grain shipped from Port Arthur and Fort William has continued to move in lake vessels to Montreal and other ports for export; only 15,000,000 bu. were loaded in 1959 in sea-going ships at the Lakehead. Ocean-going ships are handicapped by the fact that they are not equipped to take grain quickly and thus cause congestion at the elevators.

Cheap water transportation of iron ore and limestone by way of the Great Lakes has been a major factor in the development of the steel industries of the United States and Canada. United States steel mills are located principally in the area around Lake Erie and south of Lake Michigan and Canadian mills are located at Hamilton, Welland and Sault Ste. Marie. These industries still rely primarily on iron ore from the Mesabi Range in Minnesota supplemented by ore from the Steep Rock and Algoma areas in Ontario. In 1959 total shipments of iron ore from ports on the Great Lakes amounted to nearly 55,000,000 net tons; most of these shipments were from United States ports on Lake Superior (Superior, Two Harbours, Duluth, Escanaba, etc.), a small proportion coming from the Canadian ports of Port Arthur and Michipicoten. The bulk of the ore went to United States steel plants.

The output of the United States Mesabi ore has now passed its peak and the cost of production there has been increasing. The United States steel industry, therefore, has been seeking new sources of ore to supplement the present supply and, since 1954, has imported iron ore from Venezuela and Canada in substantial quantities. The development of the tremendous reserve in the Quebec-Labrador area and the construction of the St. Lawrence Seaway provides the United States and the Canadian steel industries with a new source of iron ore, easily accessible and at a cost competitive with the present prices of ore from the Mesabi Range.

The long-term prospect of the Seaway as a main route for Quebec-Labrador ore to steel mills in Central Canada and the United States is excellent. This region in the next decade may produce about 30,000,000 tons of iron ore a year. The locks, however, offer some difficulty and it is hoped that the "twinning" of locks of the Welland Canal will allow the simultaneous handling of up and down ships. The movement of Labrador ore to the Hamilton steel mills without costly trans-shipments at intermediate ports should help to keep the price of steel down. At the same time, the Seaway will increase the competitive ability of European and United Kingdom steel producers in central Canadian markets. Before the opening of the Seaway, the additional costs of trans-shipment at St. Lawrence or Atlantic ports provided a degree of natural protection for the Canadian steel industry.

The forest group of commodities includes principally newsprint, wood pulp, pulpwood and lumber. Most of these products are shipped to the United States by rail rather than by water. Shipments of pulpwood are the most important—each year about half a million tons move down through the Sault Ste. Marie canals and about the same volume moves up through the St. Lawrence and Welland canals. About half of the pulpwood goes to the United States and the remainder to Thorold, Ont. Canadian wood pulp, like newsprint, has a substantial market in the United States but most of it moves by rail. Some wood pulp comes from Ontario and some from Quebec moves up through the St. Lawrence canals from Baie Comeau to the Chicago area. Only about a quarter of a million tons of newsprint pass through St. Lawrence canals to the United States. Lumber moving into Central Canada and the United States from British Columbia and the Maritime Provinces is largely transported by rail; British Columbia lumber also moves eastward by sea via the Panama Canal.

Most of the coal moving on the Great Lakes comes from the United States Lake Erie ports, though a small amount comes from South Chicago. As already mentioned, the greater part of these coal shipments does not go through the canals. The opening of the Seaway affected the movement of coal in Eastern Canada by allowing larger vessels to move in and out of the Great Lakes without trans-shipment. This fact improved marketing conditions for United States coal in Canada but affected adversely the coal industry in Nova Scotia, which is assisted by the Canadian Government freight subvention. There is also a relatively unimportant downbound traffic through the St. Lawrence canals in coke, which originates in the United States.

The Ontario ports of Sarnia, Toronto and Port Credit are the major Canadian distributing centres for gasoline and petroleum products in the Great Lakes region, and Montreal is the major distributing centre for the St. Lawrence region. The Seaway has opened new market potentialities for foreign oil in Central Canada. Montreal refineries are already served entirely by imports from Venezuela, the British West Indies and the Middle East. It is believed that the Seaway will increase the competitive ability of foreign oil because large oil tankers carrying loads of about 70,000 b/d will be able to supply Ontario refineries at Toronto and Sarnia, and the same may be true of other refined products.

Sand, gravel and stone represent low unit value and are usually carried in scows. They constitute a considerable volume of traffic in the Great Lakes area but are of no great importance on the St. Lawrence; only small amounts move down from the Oka region of Quebec to Montreal.

Also moving by way of the St. Lawrence system are some bulk commodities such as cement, gypsum, quartzite, fluorspar, sulphur, fertilizers, etc., which are shipped in relatively small quantities, and general merchandise such as salt, sugar, fish, packaged freight, etc. General merchandise, which consists of miscellaneous goods of varying sizes and weights, is of high unit value and provides considerable revenue to the shipowners.

Financing the Seaway.—The annual report of the St. Lawrence Seaway Authority for 1959 contains the financial statement for the first season's operation. By law, the St. Lawrence Seaway Authority and United States authorities are required to charge tolls on ships and cargoes using the Seaway, which would recover expenditures for Seaway operation and maintenance and pay interest and amortization of capital within the 50-year period. On this basis, after estimating annual cargo traffic over 50 years, a tariff of tolls has been established that would be high enough to cover the costs and yet low enough to encourage water traffic. The toll revenue earned from the Seaway, i.e., between Montreal and Lake Ontario, is divided between the United States and Canada according to the respective costs they incurred in its construction. Out of 1959 toll revenues, Canada received about 73 p.c. and the United States the remaining 27 p.c. The tolls derived from the Welland canal belong exclusively to Canada.

Total toll revenue of the St. Lawrence Seaway Authority on the Seaway in 1959 amounted to \$9,214,475, comprising \$7,105,279 assessed for transits through the new Seaway locks between Montreal and Lake Ontario, \$1,224,062 from the Welland Canal, and \$885,134 from other services. Administrative, operating and maintenance expenses amounted to \$3,953,000, resulting in a net income of \$5,261,000 before providing for interest and depreciation charges. The latter two items totalled \$11,949,000, out of which the due interest charge on loans from the Government of Canada was \$7,994,000. Thus the Canadian section of the waterway showed a loss of \$6,688,000. This substantial deficit resulted from a lower tonnage of traffic than had been forecast. At the end of March 1960, an interest payment of \$5,000,000 was made to the Federal Government of Canada.

Because of international agreement, there can be no alteration of the toll structure until 1964, when a review will take place. Any change upward in the toll structure would probably discourage some traffic. If the costs of construction of the Seaway cannot be recovered within the 50-year amortization period, then perhaps this period will be extended. Loan servicing may be deferred during the development period of the first ten years or so, and as traffic increases in volume it will generate more revenue to pay back the full cost of construction, plus interest.

Future of the Seaway.—The basic limitations of the Seaway are to be found in a navigation season of about 230 days only (from the middle of April to the middle of December) imposed by climatic conditions, and in the dimensions of the locks and canals. The latter in time will have to be adjusted to the future technological requirements of shipping. The capacity of the Welland Canal is being improved by the construction of the tie-up walls which enable ships to move quickly into the locks and to have more ships in the canal at one time.

A teletype system, installed during the winter of 1959 and connecting all locks on both the St. Lawrence and Welland systems, makes it possible to report quickly on the situation of any ship, e.g., a delay due to trouble, and to give information to port authorities as to probable arrival of ships so that berthing space may be allocated in advance for quicker loading and unloading. Moreover, with a tendency for larger vessels to use the Seaway, tonnage will increase more rapidly than the actual number of ships.

It appears now to be physically possible to keep the Seaway and its ports open throughout the year, although the maintenance of ice-free locks is as yet uneconomical. However, the more successful the Seaway becomes in terms of increased traffic and lowered transportation costs, the greater will be the incentive to lengthen the navigation season. It is expected that, with increased movement of iron ore, grain, coal, etc., about 50,000,000 tons of cargo will pass annually through the St. Lawrence Seaway within a decade. This build-up in traffic will, of course, be gradual and will result from the growth of the general economy of the mid-Continent and of Canadian foreign trade. But it can be claimed that the St. Lawrence Seaway is already performing the role for which it was designed—to be a low-cost waterway leading into the heart of the Continent, for Canada, the United States and other countries.

Subsection 5.—Marine Services of the Federal Government

The services covered in this Subsection deal with aids to navigation, including the maintenance of the St. Lawrence River Ship Channel, steamship inspection, pilotage service, sea-faring personnel and the operations of the Canadian National (West Indies) Steamships Limited.

Aids to Navigation.—Included under aids to navigation are the lighthouses and the whole system of marine danger signals on the East and West Coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the Mackenzie River and Arctic passages, the inland rivers and lakes, and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described at p. 862. A further aid to safe navigation is found in the chains of radio signal and direction-finding stations described under Marine Navigation in Chapter XIX, pp. 897-898. Lists of aids to navigation, with the exception of very minor ones, are published by the Department of Transport.

15.—Marine Danger Signals Maintained in Canada, Years Ended Mar. 31, 1958 and 1959

NOTE.—In addition to the aids to navigation listed, approximately 10,400 unlighted buoys, balises, dolphins and beacons are maintained. Lists of marine danger signals maintained from 1929 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Type of Signal	1958	1959	Type of Signal	1958	1959
	No.	No.		No.	No.

Diaphones and tyfons.....	247	267	Fog guns and bombs.....	6	4
Mechanical bells and gongs.....	49	20			

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Ice-breaking operations are carried on at the beginning and at the end of winter to prolong the season of navigation in important waters that freeze over—particularly in connection with sea-going shipping from Montreal—and to prevent flood conditions during the spring ice break-up.

St. Lawrence River Ship Channel.—This channel extends from about 40 miles below Quebec City to the foot of Lachine Canal at Montreal, a distance of 200 miles. About 113 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points, and additional anchorage and turning areas. This section comprises about 100 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 13 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec, maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Marine Reporting Service.

A fleet of ice-breaking vessels is maintained to facilitate the movement of shipping between Montreal and the sea during the opening and closing of navigation, and to alleviate flood conditions in low-lying areas.

16.—Seasons of Open Navigation on the St. Lawrence Ship Channel, 1940-59

NOTE.—Figures from 1882 are given in the corresponding table of previous Year Books beginning with the 1934-35 edition.

¹ "Channel Open" means the route can be navigated although there may be floating ice in the river.

Steamship Inspection.—The Steamship Inspection Service was established by authority of the Canada Shipping Act. Its functions include the approval of design of the hulls, machinery and equipment of ships; inspection during construction; periodic inspection and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers

employed in loading and unloading ships; the prevention from pollution of Canadian territorial waters by oil from ships; and the certification of marine engineers. The Board also looks after the interests of the Federal Government in schools for marine engineers.

The Chairman and the Board of Steamship Inspection are located at Ottawa and there are field offices in the principal ocean and inland ports.

Pilotage.—Pilotage service functions under the provisions of Part VI of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 42 pilotage districts in nine of which the Minister of Transport is the pilotage authority (see Table 18); in each of the other districts the authority is a local body appointed by the Governor in Council.

In addition there are 21 districts in Newfoundland under the local pilotage authority. These districts continued to be administered under Newfoundland statutes after union with Canada (Mar. 31, 1949). Part VI of the Canada Shipping Act with respect to pilotage has not been proclaimed in force in Newfoundland.

Seamen Engaged and Discharged.—Seamen engaged and discharged at Canadian ports under the provisions of the Canada Shipping Act during the years ended Mar. 31, 1949-58 are shown in Table 19.

19.—Seamen Engaged and Discharged at Canadian Ports, Years Ended Mar. 31, 1949-58

NOTE.—Figures from 1918 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Canadian National (West Indies) Steamships Limited.—In conformity with the Canada-West Indies Trade Agreement of 1926 (SC 1926, c. 16) the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships Limited.

The eight vessels owned by the Company ceased active operations on July 4, 1957, as a result of a strike called by the Seafarers International Union. Prolonged negotiations failed to end the strike and it was decided to sell the fleet and wind up the affairs of the Company. The vessels were sold in August 1958 to the Banco Cubano del Comercio Exterior of Havana, Cuba.

20.—Financial Statistics of Canadian National (West Indies) Steamships Limited, 1949-58

NOTE.—Figures for the years 1929-38 are given in the 1942 Year Book, p. 620; for 1939-44 in the 1950 edition, p. 777; and for 1945-48 in the 1956 Year Book, p. 844.

Section 2.—Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government. Capital expenditure by municipalities and private capital expenditure is confined almost entirely to terminal or dockage facilities. On the other hand, investment in shipping has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.—The only figures available of federal capital expenditure on Canadian waterways are those compiled from the *Public Accounts* and the annual reports of the Departments of Transport, Public Works and Finance. It must be realized that such expenditure cannot be regarded as any indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of works that have been superseded such as, for instance, the first Welland Canals. To this extent such figures are an overstatement of the present value of the works in use. The figures are further limited by the fact that they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Table 21 shows that capital expenditure on canals, marine services and miscellaneous water-transport facilities reached the grand total of \$455,311,994 by the end of March 1958, but this must be interpreted with the above qualifications in mind. In Table 22 the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1957 and 1958, and are additional to the capital expenditure of Table 21. Figures in Table 22 reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 21 for waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they also have been subject to deductions for depreciation and the scrapping or abandonment of plant and therefore more nearly approach the present value of the properties under the administration of the National Harbours Board.

21.—Capital Expenditure of the Federal Government on Canals, Marine Services and Miscellaneous Water-Transport Facilities, as at Mar. 31, 1957 and 1958

NOTE.—Compiled from annual reports of the Department of Transport and the *Public Accounts*.

Waterways Expenditure and Revenue on Consolidated Fund Account.—

Expenditure under this heading (Tables 24 to 26) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport and the Department of Public Works is shown in Table 27.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the Canadian National (West Indies) Steamships Limited and of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 29. Operating expenditure and revenue of facilities administered by the National Harbours Board are shown separately in Table 28.

PART V.—CIVIL AIR TRANSPORT*

Section 1.—Administration and Development

Historical Developments.—Canada's aviation history dates back to 1909 when the *Silver Dart*, piloted by Jack McCurdy (Hon. J. A. D. McCurdy, former Lieutenant-Governor of Nova Scotia), flew at Baddeck, N.S. This was the first aeroplane flight by a British subject in the British Empire.

There was little aviation development in Canada until World War I. Following the War, many of Canada's wartime aviators assisted in developing air transportation services into inaccessible areas, air forestry patrols and intercity air services. During this period the flying clubs movement received government assistance in the training of pilots and engineers required by Canada's civil aviation industry.

World War II was a period of intensive construction of airports and aerodromes to meet the requirements for the training of airmen under the British Commonwealth Air Training Plan. At the end of the War, many Service-trained Canadian airmen turned

* Sections 1 and 2 of this Part were revised in the Department of Transport and Section 3, except where otherwise indicated, in the Transportation and Public Utilities Section, Public Finance and Transportation Division, Dominion Bureau of Statistics. For military air transportation, see Chapter XXVI on Defence of Canada.

to commercial flying and were absorbed by existing operating companies or helped to develop other flying services. Transatlantic air services were inaugurated by the Department of Transport during the War and were turned over to Trans-Canada Air Lines which was created by Act of Parliament in 1937 to provide for the development of a government-controlled transcontinental air service for regular scheduled operations. Canadian Pacific Air Lines was created by the amalgamation of small commercial operators for the servicing of Canada's northland. In 1949 the Canadian Pacific Air Lines was designated to provide transpacific services on behalf of Canada and in the spring of 1959 began the operation of one daily transcontinental flight each way between Montreal and Vancouver. Current operations of TCA and CPA are covered on pp. 871-872.

The Control of Civil Aviation.—The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act 1919 and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Assistant Deputy Minister, Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain regulatory functions of commercial air services (see p. 806). Part III deals with matters of government internal administration in connection with the Act.

Weather Services.—Weather Services are provided by the Meteorological Branch of the Department of Transport to meet the increasing demands of agriculture, aviation, industry and the general public. The expanding weather services required by the Department of National Defence, both in Canada and for Canadian Armed Forces abroad, are a major responsibility of the Branch. A central analysis office is operated in Montreal together with 58 forecast offices across Canada, two on shipboard, and four in Europe. Forecast offices are linked by 39,220 miles of teletype and radio-teletype circuits, and by a national facsimile system covering a total of 13,800 airline miles. At Jan. 1, 1960, the Branch maintained 258 synoptic stations taking six-hourly observations, a network of 32 radiosonde stations including five in the extreme Arctic operated jointly with the United States, 71 stations recording upper winds, and 1,573 climatological stations. One ocean weather station taking weather observations every three hours in the Pacific, 1,000 miles west of Vancouver, is maintained under International Agreement. (See also p. 78.)

Air Industries and Transport Association.—Commercial flying schools that are members of the Air Industries and Transport Association numbered 57 at the end of 1958. During that year the number of students instructed and graduated as private pilots was 1,240, the number graduated as commercial pilots was 150 and 61,010 instructional hours were flown.

Royal Canadian Flying Clubs.—At the end of 1959 there were 41 flying clubs connected with the Royal Canadian Flying Clubs Association. The total membership was 10,562 and the aircraft available for instructional purposes numbered 207. During the year, 1,711 students were instructed and graduated as private pilots and 124 students were graduated as commercial pilots. Instructional hours of flying totalled 109,502.

International Air Agreements.—The position of Canada in the field of aviation as well as its geographical location makes imperative co-operation with other nations of the world engaged in international civil aviation. Canada took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization (ICAO) which has headquarters at Montreal, Que. A special article on The International Civil Aviation Organization and Canada's Participation Therein appears in the 1952-53 Year Book, pp. 820-827.

In recent years Canada has been a signatory to agreements concerning civil aviation with Australia, New Zealand, Belgium, Denmark, France, Ireland, Japan, Mexico, the Netherlands, Norway, Peru, Portugal, Sweden, Switzerland, the United Kingdom and the United States.

Section 2.—Air Services

Air transport services may be grouped into two broad classes—Scheduled Services and Non-scheduled Services. Services in the first group are operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft, serving designated points in accordance with a service schedule and at a toll per unit. The second group includes the following:—

- (1) Regular Specific Point Air Services—operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft serving designated points on a route pattern and with some degree of regularity, at a toll per unit.
- (2) Irregular Specific Point Air Services—operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft, from a designated base, serving a defined area or a specific point or points, at a toll per unit.
- (3) Charter Air Services—operated by air carriers who offer public transportation of persons and/or goods by aircraft from a designated base, at a toll per mile or per hour for the charter of the entire aircraft, or at such other tolls as may be permitted by the Board.
- (4) Contract Air Services—operated by air carriers who do not offer public transportation but who transport persons and/or goods solely in accordance with one or more specific contracts.
- (5) Flying Clubs—operated by air carriers incorporated as non-profit organizations for the purpose of furnishing flying training and recreational flying to club members.
- (6) Specialty Services—operated by air carriers for purposes not provided for by any other class, such as flying training, recreational flying, aerial photography and survey, aerial pest control, aerial advertising, aerial patrol and inspection, etc.

Current operations of the two major air lines forming the nucleus of Canada's freight and passenger air service are outlined below.

Trans-Canada Air Lines.—During 1959, TCA flew 1,828,902,000 passenger miles, carrying 3,209,197 passengers. Ton-miles of air freight totalled 15,100,000, air express 2,653,000 and mail 10,905,000.

During the year the company introduced non-stop Viscount service between Regina and Edmonton and extended Viscount operations to Tampa, Florida, from Toronto. In May, direct service began between Canada and Austria with a weekly flight to Vienna, while winter service to Antigua, West Indies Federation, was extended on a year-round basis. Transcontinental service was increased to 12 daily round-trip flights during summer months, representing 700 available seats in each direction, while as many as 18 weekly return flights were operated across the North Atlantic between Canada and the United Kingdom and Continental Europe. At the year's end, TCA was serving 39 Canadian cities, and six centres in the United States, as well as the British Isles, France, Germany, Belgium, Switzerland and Austria, Bermuda and the islands of the Caribbean over 30,500 miles of air routes.

TCA's fleet in service at the end of 1959 consisted of 49 Viscounts, 13 Super Constellations, 21 North Stars and nine DC-3's. Its working force numbered 10,452.

The airline took delivery of the first of six ordered Douglas DC-8 jets on Feb. 7, 1960, and the first of 20 Vickers Vikings on order was delivered to the airline in July for service on domestic and trans-border routes beginning in October. Combined with the long-range DC-8's and the short-range Viscounts, the Vikings will give TCA an all-four-engined, turbine-powered fleet in 1961, probably the first in the air transportation industry.

¹ Express and excess baggage.² Includes other revenue.

Canadian Pacific Air Lines, Limited.—Canadian Pacific Air Lines operates a 44,700-mile route pattern linking five continents as well as major cities in Canada. This pattern comprises 7,500 domestic route miles (including 2,450 miles on the Canadian mainline service inaugurated on May 4, 1959). In 1959, CPA flew 303,384 revenue passengers a total of 457,704,874 revenue passenger-miles. Revenue cargo amounted to 5,466,965 ton-miles and mail to 2,694,003 lb. CPA overseas routes, 37,200 miles in extent, operate from Vancouver to Australia, New Zealand, Honolulu and Fiji on the South Pacific service; to Japan and Hong Kong via the Great Circle Route through the Aleutian Islands of the North Pacific; from Vancouver to Amsterdam via Edmonton, across the Arctic; and across the Atlantic from Montreal to Portugal, Spain and Italy. A South American network serves Mexico City, Lima, Santiago and Buenos Aires. Two services link Mexico City with both Toronto and Vancouver. In Canada, CPA operates a mainline transcontinental service linking Vancouver, Winnipeg, Toronto and Montreal and also north-south routes in Western Canada.

At the end of 1959, CPA's fleet consisted of 32 aircraft. These will be augmented by four 159-passenger Douglas Super DC-8 jet airliners scheduled for delivery in 1961. The order for these six-million-dollar aircraft, with options for five more, was announced in October 1959.

Independent Air Lines.—In addition to the two major Canadian air carriers—Trans-Canada Air Lines and Canadian Pacific Air Lines, Limited—there are four domestic air carriers licensed to operate scheduled commercial air services in Canada, namely, Maritime Central Airways Limited, Charlottetown, P.E.I.; Pacific Western Airlines Limited, Vancouver, B.C.; Quebecair Inc., Rimouski, Que.; and TransAir Limited, Winnipeg, Man.

Licensed domestic air carriers operating in Canada as at Mar. 31, 1959 held valid operating certificates covering 43 scheduled, 119 flying training, and 779 other non-scheduled and specialty services. These non-scheduled services, in addition to providing effective access to sections of Canada that are inaccessible by other means of transportation, act as feeder lines to the scheduled airlines. They also include such specialty services as recreational flying, aerial photography and surveying, aerial pest control, aerial advertising and aerial patrol.

Commonwealth and Foreign Scheduled Commercial Air Services.—At the end of December 1959 there were 17 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences covering international scheduled commercial air services operating into Canada, as follows:—

Air France (Compagnie Nationale Air France) operates between Paris and other points in Metropolitan France; Montreal, Que., Canada; Chicago, Ill., U.S.A., and points beyond.

American Airlines, Inc. operates between Toronto, Ont., Canada, and New York, N.Y./Newark, N.J., via Buffalo, N.Y., U.S.A.

British Overseas Airways Corp. operates between London, England, Prestwick, Scotland, Shannon, Ireland, Gander, Nfld., and Montreal, Que., Canada; and between London, England, Montreal, Que., Canada, and Jamaica in the West Indies.

Eagle Airways (Bermuda) Ltd. operates between Montreal, Que., and Bermuda.

Eastern Air Lines, Inc. operates between the terminals Ottawa, Ont., Canada, and Montreal, Que., Canada, and New York, N.Y., U.S.A., direct or via Burlington, Vt., U.S.A.; and between the terminals Ottawa, Ont., and Montreal, Que., Canada, and Washington, D.C., U.S.A., direct or via Massena/Syracuse, N.Y., U.S.A.

KLM Royal Dutch Airlines operates between Amsterdam, the Netherlands, Gander, Nfld., Canada, and Montreal, Que., Canada; and between Amsterdam, the Netherlands, Gander, Nfld., Canada, and New York, N.Y., U.S.A.

Lufthansa German Airlines operates between Hamburg, Germany, and other points abroad; Montreal, Que., Canada; and Chicago, Ill., U.S.A.

Northeast Airlines, Inc. operates between Montreal, Que., Canada, and Boston, Mass., U.S.A., via Burlington, Vt., Montpelier-Barre, Vt., White River Junction, Vt. (Lebanon Airport, N.H.), and Concord, N.H., U.S.A.

Northwest Airlines, Inc. operates between Winnipeg, Man., Canada, and Fargo, N.D., U.S.A.; and between Minneapolis/St. Paul, Minn., U.S.A., Edmonton, Alta., Canada, Anchorage, Alaska, and beyond.

Pan American World Airways Inc. operates between Seattle, Wash., and Fairbanks, Alaska, U.S.A., with points of call at Juneau and Annette Island, Alaska, and Whitehorse, Y.T., Canada; and between points in the United States, Gander, Nfld., Canada, and Europe.

Qantas Empire Airways Ltd. operates between Sydney, Australia, San Francisco, Cal., U.S.A., and Vancouver, B.C., Canada.

Sabena Belgian World Airlines operates between Brussels, Belgium, via Shannon, Ireland, and Montreal, Que., Canada.

Scandinavian Airlines System operates between Stockholm, Sweden, Oslo, Norway, Copenhagen, Denmark, Prestwick, Scotland, Montreal, Que., Canada, and New York, N.Y., U.S.A.

Seaboard and Western Airlines, Inc. operates between points in the United States, Gander, Nfld., Canada, and beyond.

TWA (Trans-World Airlines, Inc.) operates between points in the United States, Gander, Nfld., Canada, and points abroad.

United Air Lines, Inc. operates between Vancouver, B.C., Canada, and Seattle, Wash., U.S.A., via Bellingham, Wash., U.S.A.

Western Air Lines, Inc. operates between Great Falls, Mont., U.S.A., Calgary, Alta., and Edmonton, Alta.

Section 3.—Civil Aviation Statistics

Ground Facilities.*—Aircraft landing areas in Canada are classified in Table 3 by administrative agency, as licensed or unlicensed land facilities or seaplane bases, and military air fields. The unlicensed aerodromes and seaplane bases shown are kept in varying degrees of readiness but lack one or more of the facilities usually found in licensed airports, such as lights, customs offices, passenger accommodation, ground/air communication, etc. Associated with these ground facilities is a network of radio aids to navigation designed to facilitate en route navigation and safe landings under low visibility conditions.

The Department of Transport operates 93 low frequency radio ranges, 20 VHF omni-directional ranges (18 under construction), 69 non-directional radio beacons and 30 instrument landing systems. These facilities are calibrated and flight-checked by Civil Aviation Inspectors on a regular schedule. Eighteen additional VHF omni-directional ranges are under construction.

3.—Aircraft Landing Areas classified by Type of Facility and Operator, by Province, as at February 1960

NOTE.—This information is based on the latest *Airport and Aerodrome Directory* published by the Department of Transport. Further details may be found in that publication and in the *Canada Air Pilot*.

Air Traffic Control.—The primary functions of the Air Traffic Control Division of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled air space, and between aircraft and obstructions on the movement area of controlled airports. This is accom-

* Compiled from information provided by the Civil Aviation Branch, Air Services Division, Department of Transport, Ottawa.

plished through airport control, approach control and area control services, together with flight information, alerting for search and rescue, customs notification and aircraft identification. These services are described below.

Airport Control is designed particularly to provide air traffic control service in the vicinity of major civil airports where the volume and type of aircraft operations, weather conditions and other factors indicate its need in the interests of safety. The service includes the control of pedestrians and vehicles on the manoeuvring area of the airport. Control is effected by means of direct radiotelephone communication or visual signals to aircraft and surface vehicles on and in the vicinity of controlled airports. The control towers are located at Whitehorse, Y.T.; Victoria, Port Hardy and Vancouver, B.C.; Lethbridge, Calgary and Edmonton, Alta.; Saskatoon and Regina, Sask.; Winnipeg, Man.; the Lakehead, Windsor, London, Toronto, Toronto Island, Ottawa and North Bay, Ont.; Montreal, Cartierville, Quebec, Val d'Or, Baie Comeau and Sept Îles, Que.; Moncton and Saint John, N.B.; Sydney, N.S.; Gander, Nfld.; and Frobisher, N.W.T. Most of these control towers are in continuous operation but a few provide 16-hour daily service only.

Approach Control service consists of the provision of standard IFR separation to aircraft operating in accordance with Instrument Flight Rules within the local approach control area, which is generally within a 30-mile to 40-mile radius of the airport. Such service is provided by approach control units at Vancouver, B.C.; Edmonton and Calgary, Alta.; Saskatoon and Regina, Sask.; Winnipeg, Man.; the Lakehead, Toronto, Ottawa and North Bay, Ont.; Quebec and Montreal, Que.; Gander, Nfld.; and Frobisher, N.W.T.

Area Control is designed particularly to provide air traffic control service to aircraft operating within controlled airspace during weather conditions which prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. Control centres are located at Vancouver, B.C.; Edmonton, Alta.; Winnipeg, Man.; Toronto, Ont.; Montreal, Que.; Moncton, N.B.; and Goose Bay and Gander, Nfld. Each centre is connected with the control towers, radio range stations and operations offices within its area by means of an extensive system of local and long-line interphone or radio circuits, and through the radio communication facilities available at these offices to all aircraft requiring area control service. Each area control centre is similarly connected with the adjacent centres, including centres in the United States, for the purpose of co-ordinating the control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of the movements of all aircraft operating in accordance with the Instrument Flight Rules, and a general record of the movements of all aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within the controlled airspace over Newfoundland, the Goose Bay and Gander control centres provide this service within the airspace over approximately one-half of the North Atlantic Ocean. The Vancouver area control centre also provides control service over the Pacific Ocean within the Vancouver Oceanic Control Area. Area control service is provided for approximately 16,000 miles of airways and control channels.

Flight Information provides advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refuelling and transportation facilities and other related data of assistance to the pilot in planning or conducting a flight. Such service is provided by all air traffic control units but particularly by the eight area control centres.

Alerting for Search and Rescue is designed to ensure that the appropriate organizations are notified of aircraft in need of search and rescue aid and otherwise to assist such organizations, as required. Area control centres are responsible for notifying these organizations promptly of non-arrival at destination of any aircraft for which a flight plan or flight notification has been received. This requires the maintenance and constant supervision of a continuous record of active flights to ensure that non-arrival of any aircraft is detected immediately. The service is available to any pilot who files either a flight plan or a flight notification with any communications agency of the Air Services of the Department or directly with one of the area control centres or control towers.

Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada-United States boundary. The Air Traffic Control communications system and units concerned therewith forward pilot requests to notify the customs officer at the airport of destination.

Aircraft Movement Information Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

The number of controlled operations in Canada during 1959 was 3,055,533.

Operation Statistics.—The statistics given in Table 4 show the volume of passenger, freight and mail traffic.

4.—Summary Statistics of Civil Aviation, 1955-58

NOTE.—Figures include operations of Canadian international carriers and Canadian operations of foreign carriers.

Table 5 shows civil aviation figures for 1958 by type of service. A definition of scheduled and non-scheduled carriers is given on p. 871. Statistics for international carriers include traffic over Canadian territory for both Canadian and foreign operators; a small amount of traffic across Canadian territory and between foreign stations is also included.

PART VI.—OIL AND GAS PIPELINES

A special article covering the history and development of pipeline construction in Canada appears in the 1954 Year Book at pp. 861-869. Additional information has been carried in each succeeding edition and the following Section brings pipeline development up to the end of 1959.

Section 1.—Pipeline Developments*

Oil Pipelines.—The growth of the oil pipeline transportation industry parallels the development of petroleum resources in Canada. Although various small diameter pipelines were built as early as 1875 in Ontario and 1925 in Alberta, almost all of the pipeline systems now in operation were constructed following the Leduc oil discovery in 1947 which ushered in the modern era of the Canadian oil and gas industry.

Except for the completion of one new pipeline from the Swan Hills area to Edmonton, built by Federated Pipe Lines Limited, there was very little oil pipeline construction in 1959. Most oil pipeline construction took place in Alberta and consisted of extensions to gathering systems. These extensions were made up largely of 40 miles of line from 12-inch to two-inch in the Swan Hills area and about 40 miles of small diameter line in the Pembina field. In addition to these, a six-inch condensate line was constructed from the gas-processing plant at Windfall to the Trans Mountain pipeline at Bickerdike pump station west of Edson. In Saskatchewan, Producers Pipeline Limited—Westspur Pipe Line

* Prepared under the direction of Dr. Marc Boyer, Deputy Minister of the Department of Mines and Technical Surveys, by R. A. Simpson, Mineral Resources Division.

added 80 miles of gathering line to its system in southeastern Saskatchewan. At the end of 1959 there were over 7,500* miles of oil pipeline in Canada. In addition there was a total of almost 1,400 miles of oil pipeline carrying Canadian crude exclusively within the United States.

There are two principal components of the oil transportation system: the trunk lines of Interprovincial Pipe Line Company and Trans Mountain Oil Pipe Line Company. Feeder lines which carry crude oil to the main terminals of these two systems fan out from Edmonton to fields as far as 125 miles away. In addition to Interprovincial's own line from the Redwater field, six pipeline companies including the new Federated line carry crude to the Edmonton terminals.

The Britam Oil Pipe Line Company operates a pipeline which originates in the Drumheller field about 140 miles south-southeast of Edmonton, and in turn takes crude from West Drumheller, Fenn-Big Valley, Stettler, Joffre, Malmo, New Norway, Duhamel and Battle fields. The Edmonton Pipe Line Company brings crude from the Camrose and Joarcan fields about 40 miles southeast of Edmonton. The Imperial Pipe Line Company system from the fields southwest of Edmonton is composed of three lines which transport crude oil from the Leduc-Woodbend, Acheson and Golden Spike fields. Pembina Pipe Line Limited carries crude from the Pembina field 70 miles west of Edmonton as well as from the Keystone field. Texaco Exploration Company operates a pipeline which takes crude oil from the Rangeland Pipe Line Company and Gibson Crude Oil Purchasing Company pipelines and from Westrose, Bonnie Glen, Wizard Lake and Glen Park fields. Rangeland serves the Sundre field, 125 miles south-southwest of Edmonton, as well as the Garrington, Innisfail, Gilby, Bentley and West Joffre fields. Gibson serves the Homeglen-Rimbey field. The Federated pipeline also serves the Edmonton terminals but is covered in some detail below.

Interprovincial Pipeline. -The Interprovincial system which, includes the wholly owned subsidiary Lakehead Pipe Line Company operating the portion of the line in the United States, is the longest oil pipeline in the world. It is 1,934 miles in extent stretching from the Redwater field 35 miles northwest of Edmonton to Port Credit near Toronto in Ontario. The system consists of two complete lines from Edmonton to Superior, Wisconsin, at the head of Lake Superior, a 30-inch line from Superior to Sarnia, Ont., and a 20-inch line from Sarnia to Port Credit. In addition to the lines bringing crude to Edmonton, one other pipeline in Alberta, two in Saskatchewan and two in Manitoba also deliver oil to the line. Deliveries are made to two pipelines in Saskatchewan, two in Manitoba and one in the State of Minnesota. Altogether, 20 refineries (13 in Canada and 7 in United States) are served either directly by Interprovincial or by connecting carriers. The capacities of the various sections of the line are as follows:—

Section	Barrels per Day Capacity
	No.
Edmonton, Alta., to Regina, Sask.	290,000
Regina, Sask., to Gretna, Man.	335,000
Gretna, Man., to Superior, Wisconsin.	346,000
Superior, Wisconsin, to Sarnia, Ont.	300,000
Sarnia, Ont., to Port Credit, Ont.	110,000

Trans Mountain Pipeline. -The Trans Mountain pipeline system is a 24-inch pipeline stretching from Edmonton to Vancouver. A lateral line transports crude oil across the border to refineries at Ferndale and Anacortes in the State of Washington. Two 50-mile loops were added earlier at bottlenecks to increase capacity, which in 1959 was 250,000 bbl.

* Mileage for 1960 will show the addition of 570 miles of pipeline in the Yukon Territory. These lines, running along the Alaska Highway between the Alaska boundary and Whitehorse and between Carcross and Watson Lake and originally forming part of the Canol system constructed by the United States during the Second World War to supply fuel for naval operations in the Pacific, were purchased by the Canadian Government from the United States on Mar. 31, 1960.

daily. In addition to taking deliveries of crude at Edmonton, it takes crude from the Peace River pipeline which serves the Sturgeon Lake, Sturgeon Lake South and Kaybob fields. Five refineries in British Columbia and three in the State of Washington are connected to the pipeline.

Federated Pipeline.—The Federated pipeline was largely completed in 1958 but first deliveries of crude oil to Edmonton were not made until late in January 1959. The main trunk line from the Swan Hills field is of 10½-inch pipe except for eight miles near Edmonton where 12½-inch pipe is needed. The line operates solely by gravity and can deliver up to 20,000 bbl. daily by this method. Pumps would raise the capacity to 78,000 bbl. daily. A lateral carries crude from the Virginia Hills, Judy Creek and Sarah Lake fields to the main line.

Pipeline Tariffs.—The cost of transporting oil by pipeline is considerably cheaper than by rail or truck. Some examples of costs follow.

<u>Route</u>	<u>Transmission Distance</u>	<u>Tariff</u>
	miles	cts. per bbl.
Edmonton, Alta., to—		
Regina, Sask.....	438	23½
Winnipeg, Man.....	848	45

Port Credit, Ont.....	1,899	72
Vancouver, B.C.....	718	40
Washington State, U.S.A.....	740	42

Gas Pipelines.—Construction of gas pipelines in Canada continued to dominate all pipeline construction in 1959. Even so, the construction program was below the record level of 1958 by about one-third. In contrast to 1958 when the majority of pipeline work was concentrated in Ontario on projects associated with the Trans-Canada pipeline, the major construction jobs were in the western provinces. Approximately 1,600 miles of all types of gas line (gathering, transmission and distribution) were laid in the west compared with 1,100 miles in the east, where the installations were essentially all distribution systems. The addition of this mileage brought the total of natural gas pipelines in Canada to over 28,400 miles. This total includes 2,671 miles of gathering line, 9,980 miles of main trunk line and 15,830 miles of distribution line.

As in the petroleum industry which has two main transmission lines from the sources of supply to markets in the east and in the west, there are two main gas trunk lines stretching in opposite directions. The gas supply of Westcoast Transmission Pipe Line Company is in the Peace River district of British Columbia and Alberta. This line serves markets in the lower mainland area of British Columbia and makes deliveries to a United States pipeline system at a point on the British Columbia-Washington border near Chilliwack. The Trans-Canada Pipe Line Company line carries natural gas from Alberta to distribution companies in Saskatchewan, Manitoba, Ontario and Quebec.

Westcoast Pipeline and Connecting Pipelines.—The Westcoast line was completed in 1957 and consists of 605 miles of 30-inch main trunk line and 206 miles of gathering line varying from 26 inches down to four inches in diameter. The line delivers to the Inland Natural Gas Company Limited, British Columbia Electric Company and to Pacific Northwest Pipeline Corporation in the United States. Inland serves the Cariboo region of British Columbia including the main towns of Kamloops, Vernon, Kelowna, Penticton, Trail and Nelson. British Columbia Electric serves the greater Vancouver area. Pacific Northwest takes gas for distribution in the northwestern United States.

Trans-Canada Pipeline and Connecting Pipelines.—The Trans-Canada pipeline is the longest pipeline in the world, consisting of a total of 2,290 miles of pipe stretching from the Alberta-Saskatchewan border to Montreal in Quebec. The line is 34 inches in diameter

from the receiving terminal to Winnipeg and 30 inches from Winnipeg to Toronto. The Toronto-Montreal portion is 20-inch pipe. The pipeline serves distribution companies in Saskatchewan, Manitoba, Ontario and Quebec.

Alberta Gas Trunk Line Company.—Extensions to the Alberta Gas Trunk system which delivers all of Trans-Canada's gas to it at Burstal, Sask., near the Alberta border constituted the largest single pipeline construction job in 1959. The construction was also the largest extension made by the company. A total of 122 miles of 30-inch pipe was constructed from the Princess field to Torrington where a 16-inch lateral was built to the Nevis field a distance of 46 miles, and a 33-mile 12 $\frac{3}{4}$ -inch lateral was built to the Carstairs field. Other laterals from the main 30-inch line included nine miles of 6 $\frac{5}{8}$ -inch pipe to the Wayne field, six miles of 6 $\frac{5}{8}$ -inch pipe to the Hussar field and seven miles of 6 $\frac{5}{8}$ -inch pipe to the Makepeace field. On the Provost main line near the Saskatchewan border, Alberta Gas trunk built six miles of 8 $\frac{5}{8}$ -inch pipe to connect the South Provost field to the 18-inch mainline.

Saskatchewan Power Corporation.—This Corporation constructed 550 miles of pipeline in 1959 of which 305 miles was mainline. A total of 80 miles of 10-inch pipe was built from the Success field to Rosetown, thus connecting the northern portion of the Corporation's system to the southern portion and the large gas reserves the company owns in the Hatton and Medicine Hat fields. The northern section was also extended to the town of Tisdale. The longest line constructed in the province in 1959 was the 113-mile, 12-inch section from Regina to Yorkton. The system was connected to a new source of supply when a line was built from the Nottingham gas conservation plant to the main line running from the Steelman conservation plant to Regina. In addition to the towns of Yorkton and Tisdale, 17 other communities in Saskatchewan received natural gas services.

Other Gas Pipelines.—In Manitoba almost all gas pipeline construction was for the Greater Winnipeg Gas Company. Approximately 350 miles of mains and extensions were completed.

In Ontario the transmission lines were completed prior to 1959. During 1959 the three large distribution firms in the province completed a total of 900 miles of pipeline, all of it for distribution purposes, although some was of larger diameter to connect towns up the valley of the Ottawa River as far as Renfrew. Union Gas Company which serves the southwest portion of the province added 250 miles of lines to its system. Consumers Gas Company which serves most of the remainder of southern Ontario completed 350 miles of pipeline. Northern Ontario Natural Gas Company which serves the northern part of the province along with Twin City Gas Company constructed 300 miles of line.

In Quebec province about 200 miles of distribution lines were completed in 1959, divided, about evenly, between the city of Hull and the Montreal area.

At the end of 1959 all of the major centres of population from Vancouver to Montreal had natural gas service.

Section 2.—Oil Pipeline Statistics*

There were 37 oil pipeline companies operating in Canada at the end of 1959, with a total mileage of 7,808 compared with 7,147 at the end of 1958. Pipeline deliveries shown in Table 1 were made to non-pipeline carriers, foreign pipelines, and terminals including refineries and distributing centres.

During 1959 operating revenues of all oil pipelines except Amurex Oil Development Company, Anglo American Exploration Company, Anglo Canadian Oils Limited, Green River Exploration Company, Mobil Oil of Canada Limited, and Sarnia Products Line totalled \$86,897,575 compared with \$76,621,901 in 1958.

* Statistics of oil pipelines are given in greater detail in the DBS monthly report *Oil Pipe Line Transport* (Catalogue No. 55-001). Additional information on the interprovincial movement of oil by pipeline will be found in Chapter XX, Part I, Section 5.

Subsection 5. Federal Government Telegraph and Telephone Services and Meteorological Communications.....	893		

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph and radio services, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country—its size, its topography, its climate, its small population—which have reared their heads in other areas of development, have had to be faced as well in the field of communications. That these have been overcome is evidenced by the fact that today Canada possesses communication facilities and services second to none in the world.

Section 1.—Telecommunications*

During the past half-century, Canada has experienced tremendous economic expansion. Population growth and the advance to new industrial frontiers have been matched by an upward surge in national productivity and general standard of living. Continuing development of Canada is dependent on both individual pioneering and the co-operative efforts of many industries and the telecommunications industry is filling a vital role in this drama of growth.

Business and industry have expanded and ventured into isolated areas assisted and promoted by Canadian telecommunications industries which have anticipated the needs of the future with vast programs of development in virgin territories. Technological development has been particularly important to the extension of telecommunications in Canada. To meet the demands placed upon it, the industry has constantly introduced newer and better equipment, tools and methods of operation. In the growth of urban centres, the development of rural communities and the pioneering of new territory, Canadian telecommunications agencies have constantly sought to provide the highest quality of service for the greatest number of people. The major railways, the hundreds of co-operating telephone companies, the radio and television companies and federal communications organizations work together with a common purpose, building networks of telecommunications from coast to coast. They provide such familiar services as telephone, telegraph, teletype, radio and television, and many other related means of communication; in addition, mutual co-operation has allowed them to satisfy a variety of defence needs.

* Textual data in the introduction of this Section and in Subsection 2 was prepared by The Bell Telephone Company of Canada, Montreal. Statistical material of Subsection 2 and Subsection 3 was revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. Subsections 1 and 4 to 7 were revised in the Telecommunications and Electronics Branch of the Department of Transport, Ottawa.

Subsection 1.—Government Control over Telecommunications Agencies

Telephone and telegraph companies incorporated under the Federal Government are subject to the jurisdiction of the Board of Transport Commissioners in the matter of rates and practices under the provisions of the Railway Act (see also p. 804); other companies are responsible to provincial regulatory bodies. In addition, tolls charged to the public for radio communications service are subject to the provisions of the Regulations made under the Radio Act. Overseas cables landed in Canada are subject to the External Submarine Cable Regulations under the Telegraphs Act.

Except for those matters covered by the Broadcasting Act, radio communications in Canada are regulated under the Radio Act and Regulations which include control of any equipment liable to cause interference to radio or television reception (see also p. 896). In addition, all radio communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto and in accordance with such regional agreements as the Inter-American Telecommunications Convention and Inter-American Radio Agreement, and the North American Regional Broadcasting Agreement. (See also p. 895.)

National radio broadcasting in Canada entered its present phase in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. The Act gave the Corporation wide powers in the operation of the system and gave to the Minister of Transport the technical control of all broadcasting stations.

During 1958 the Government established a Board of Broadcast Governors and the Canadian Broadcasting Corporation Board of Governors was abolished. The Board of Broadcast Governors regulates the establishment and operation of networks of sound and television broadcasting stations, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. While the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that the applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Department.

Subsection 2.—Telephones

Alexander Graham Bell first transmitted human speech through electrically energized equipment in March 1876, and in August of the same year a one-way call from Brantford to Paris in Ontario marked the first successful long-distance test of the new invention. Soon after the instrument was perfected, telephone exchanges sprang up in many Canadian communities, sometimes two competing companies in one place. As a result, in April 1880 The Bell Telephone Company of Canada was established by Act of Parliament and authorized as the official agent for telephone service in thirty-two cities and towns across the country. However, it came to be recognized that, in the existing state of the industry, one company could scarcely develop and organize service over so wide a territory and separate companies were set up in British Columbia. The Bell Telephone withdrew from the Maritime Provinces in the 1880's and installations in the Prairie Provinces were sold to the respective provincial governments in 1908-09. The seven major telephone systems that developed across Canada worked together to establish long-distance service on a national basis and in 1931 they founded the Trans-Canada Telephone System, which now has eight full members including both shareholder-owned companies and provincial government systems. They are as follows:—

The Avalon Telephone Company Limited (joined in 1957)
Maritime Telegraph and Telephone Company Limited
The New Brunswick Telephone Company Limited
The Bell Telephone Company of Canada (serving Ontario and Quebec)
Manitoba Telephone System
Saskatchewan Government Telephones
Alberta Government Telephones
British Columbia Telephone Company.

These eight systems, together with the Island Telephone Company (P.E.I.), Québec Téléphone (lower St. Lawrence), Ontario Northland Communications, the Okanagan Telephone Company, and the North-west Telephone Company (associated with the British Columbia Telephone Company) comprise the Telephone Association of Canada. This organization was established to ensure general co-operation in telephone matters.

As already mentioned, the steadily rising demand for local and long-distance service has called not only for general expansion of Canadian telephone systems but for the constant introduction of modern facilities and services. A number of Canadian companies have developed what is called "Extended Area Service" in many of the communities they serve. This plan eliminates long-distance charges between the larger centres and their suburbs, or between two or more places with close community of interest.

As part of the transmission facilities needed to carry the great volume of long-distance traffic as well as network television programs, the members of the Trans-Canada Telephone System collaborated to build a microwave radio relay network spanning Canada from coast to coast. The longest such network in the world, it was placed in operation on July 1, 1958. It is maintained jointly, each system member being responsible for the section falling in its operating territory. This network, ultimately capable of carrying 2,400 long-distance conversations and two television programs at the same time, is steadily being expanded toward the limit of its capacity. In addition, extensions to the original network have been made, bringing long-distance telephone service and television programs to many more remote areas.

For several years operators have been dialing many long-distance calls direct to the wanted telephone. The modern switching system which makes this possible also permits customer dialing of long-distance calls. Known as Direct Distance Dialing, customer dialing of long-distance calls has been in effect for some time in the Toronto, Windsor and Guelph areas in Ontario. In 1960 it is being introduced in Montreal and Valleyfield in Quebec, and in Cornwall, London, St. Thomas, Fort Erie and Stratford in Ontario. It will also be introduced in 1960 in Nanaimo and Okanagan, B.C. A long-range international plan, developed by the telephone companies of Canada and the United States, will eventually allow practically every telephone-user in North America to dial direct to almost any other telephone on the Continent. Direct dialing, an added convenience for telephone customers, will allow Canadian telephone companies to handle economically the ever-growing volume of long-distance calls.

The northward extension of industry in Canada has, of course, required the northward expansion of telephone communications. The North-west Telephone Company operates a radio chain from Vancouver up the British Columbia coast to Kitimat. Uranium City in northern Saskatchewan, located in a vast area of muskeg and swamp, is provided with communications through a radio network out of Prince Albert, Sask. In Manitoba, the radio-telephone service reaches out to a large number of isolated settlements and bush camps, and also provides communications for aircraft and for boats plying Lake Winnipeg. Goose Bay in Labrador and the iron-ore-rich Schefferville area of the Quebec-Labrador boundary are now in immediate telephone contact with the remainder of the world through a radio relay network operated out of Quebec City through Sept Îles. A branch of this system, built in 1959, extends long-distance service to the new mining settlement of Gagnon, Que. In the same year, Bell Telephone opened its farthest-north exchange at Frobisher on Baffin Island.

Numerous flexible services are provided by Canadian telephone companies for business and industry. Special conference circuits can be quickly arranged, enabling widely scattered business interests to discuss their affairs without the inconvenience and expense of

travel. Data transmitting and processing facilities allow rapid exchange of coded and printed information between plants, warehouses, retail outlets and many other business and industrial locations. Telephoto and facsimile provide photographic copy direct from the originator. Radio installations link the traveller with the regular telephone network, providing mobile service for such users as highway departments, trucking and construction firms, fire and ambulance services, and police departments. Oil pipeline companies also use the service as part of their communications arrangements to maintain contact between central offices, storage tanks, pumping stations and control units.

There is a significant demand for telephone service which is both efficient and attractive in appearance. Telephones in a wide range of colours for home and office are steadily increasing in popularity. Business telephone users have been quick to accept the products of telephone research, such as the Call Director, a telephone offering a flexible combination of dial telephone and push-button intercommunication system. The ready acceptance of these and many other new concepts in home and business telephone service has helped to create employment in allied industries for many Canadians.

Telephone Statistics.—There were 2,619 telephone systems operating in Canada in 1958 compared with 2,637 in 1957. The number of co-operative systems in rural districts increased from 2,177 to 2,184 but the number of shareholder-owned companies decreased from 330 to 318. The largest of the stock companies, The Bell Telephone Company of Canada, operating throughout the greater part of Ontario and Quebec, served 61 p.c. of all the telephones in Canada, and the British Columbia Telephone Company, also shareholder-owned, served 9 p.c. of the total.

The number of telephones in use in Canada has risen by 90 p.c. in the past ten years. At Dec. 31, 1958 there were 5,118,293 telephones in service compared with 4,827,135 in 1957 and 2,699,612 in 1949. The number of residential telephones and the number of business telephones increased by 7 and 6 p.c., respectively, during 1958. Rural telephones were up 3 p.c. and pay telephones 4 p.c. By the end of the year, 82 p.c. of all telephones in Canada were dial-operated as compared with 80 p.c. in 1957. Pole-line mileage and wire mileage continue to increase year after year.

1.—Mileages of Pole Line and Wire and Number of Telephones in Use, 1949-58

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

¹ Ontario four-party telephones included under Rural Lines.

The major telephone systems record completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, gives their total volume of business. Estimates are included for the smaller systems. The number of completed calls on all systems in 1958 was estimated at 8,707,631,000 compared with 8,255,709,000 calls in 1957, or an average of 1,701 calls per telephone and 511 calls per person compared with 1,710 calls per telephone and 498 calls per person in 1957.

Extended area service which eliminates toll charges between adjacent communities was introduced in more centres across Canada but, despite this service, long-distance calls increased by 7,328,000 from 1956 to 1957 and by 15,578,000 from 1957 to 1958.

3.—Local and Long-Distance Calls and Average Calls per Telephone and per Capita, 1949-58

NOTE.—Figures from 1928 will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

¹ Statistics of The Bell Telephone Company of Canada for both Quebec and Ontario are included under Quebec.

² Excludes wages and employees for rural systems.

Subsection 3.—Telegraphs

At the end of 1959 nine telegraph and cable companies were in operation in Canada. These systems, composed of lines owned by the Federal Government and the chartered railway and telegraph companies, including the Canadian Overseas Telecommunications Corporation (see p. 892), increased their property and equipment to \$226,914,034, more than 14 p.c. above that reported in 1958. A new record was set for operating revenues at \$52,962,913, up 11 p.c. from the previous high of 1958, and net income also rose to a new high of \$8,391,094, 23 p.c. over the 1958 figure. Fewer telegrams were sent, the lowest number since 1942, but cablegrams increased again in 1959 to 2,602,974, after showing a decrease in 1958.

6.—Summary Statistics of Canadian Telegraphs, 1950-59

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Gross Revenue	Operating Expenses	Net Operating Revenue	Pole-Line Milage	Wire Milage	Employees ¹	Messages, Land ²	Cable-grams and Marconigrams ³	Money Transferred
	\$	\$	\$	miles	miles	No.	No.	No.	\$
1950.....	23,922,225	22,545,625	1,376,600	51,999	414,943	9,757	20,477,775	1,687,721	12,733,989
1951.....	29,128,473	27,807,547	1,320,926	53,580	435,348	10,611	21,815,837	1,785,836	16,955,699
1952.....	33,093,843	31,617,156	1,476,687	52,699	437,581	11,272	21,614,196	1,934,433	19,514,490

1959.....	52,962,913	43,511,666	9,451,247	47,470	486,875	10,586	16,390,997	2,602,974	25,589,067

¹ Excludes commission operators.

² Includes messages to and from vessels on the Great Lakes and the St. Lawrence River and messages to and from stations.

³ Excludes relayed messages.

Subsection 4.—Overseas Telecommunication Services

The Canadian Overseas Telecommunication Corporation was established in 1950 to maintain and operate, in Canada and elsewhere, external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and any other place and between Newfoundland and any other part of Canada; to make use of all developments in cable and radio transmission and reception for external telecommunication services; to conduct investigation and research with the object of improving and co-ordinating such telecommunication services with the telecommunication services of other parts of the Commonwealth.

In 1952 the Corporation commenced an expansion program of overseas services designed to meet future requirements and the following services have so far been established: direct radiotelegraph communications between Canada and France, Italy and Germany; direct radiotelegraph, radiotelephone, telex and picture transmission services with Australia, New Zealand and Japan from stations at Ladner and Cloverdale, B.C.

In 1956 the first transatlantic telephone cable, a joint project with the British Post Office, American Telephone and Telegraph Company and the Corporation, was brought into service. Apart from normal use of the system for public telephone and telegraph message traffic, capacity is available for private leased circuits. The Corporation introduced the International Telex service into Canada in 1956 and service with 46 countries is now available. The first transatlantic slow-scan television pictures were transmitted between Canada and the United Kingdom in 1959. Twenty-four telephone circuits have been provided and are now in use between the mainland and Newfoundland.

At present under construction is the Canada-United Kingdom 80-circuit telephone cable scheduled for completion in 1961. Jointly with the Great Northern Telegraph Company, the Corporation will provide a Canada-Greenland-Iceland 24-circuit telephone cable—primarily to meet the North Atlantic communication needs of international civil aviation—scheduled to come into operation in 1962. A four-party project (Canada, United Kingdom, Australia and New Zealand) will provide a Canada-New Zealand-Australia 80-circuit telephone cable. This section of the Commonwealth round-the-world telephone cable system is scheduled for completion early in 1964.

In addition to the overseas services operated by the Canadian Overseas Telecommunication Corporation, two cable companies operate submarine cables landing in Canada—the Commercial Cable Company and the Western Union Telegraph Company.

These companies operate to stations in the United Kingdom, Ireland, the United States, the Azores and St. Pierre and Miquelon Islands. The Eastern Telephone and Telegraph Company owns and maintains radio relay and cable facilities between Nova Scotia and Newfoundland. The number of cables operating between connected stations and the length of cables are given in the following table.

Subsection 5.—Federal Government Telegraph and Telephone Services and Meteorological Communications

Telegraph and Telephone Services.—The Telecommunications and Electronics Branch of the Department of Transport provides a telephone service to some communities on Cape Breton Island and, by submarine cable, to certain islands off the Atlantic Coast of Nova Scotia; telephone and telegraph services on the Magdalen Islands; and a telegraph service to a few isolated places in Labrador.

As of Mar. 31, 1960, these services comprised 346.44 miles of pole line, 818.8 miles of open wire, 77.18 miles of aerial cable, 30.3 miles of submarine cable, and seven radiotelephone stations. Telephone service was provided for 1,583 subscribers, of whom 331 were served through lines connected with private company exchanges.

Meteorological Communications.—Weather stations operated by the Meteorological Branch of the Department of Transport throughout Canada are linked coast-to-coast by means of teletype and in the remote northern areas by radio or radioteletype. The

landline teletype circuits are leased from commercial companies. The radio circuits are operated chiefly by the Telecommunications and Electronics Branch of the federal Department of Transport.

Weather stations on the teletype network transmit their reports directly; other stations report via commercial or radio facilities to the nearest station on the teletype line for subsequent transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-to-coast systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Moncton, Halifax, Gander and Goose Bay. These main meteorological communications centres not only handle the distribution of weather information within Canada including the Arctic, but also effect international exchange with the United States and Europe and, through them, with many other countries. For the latter purpose, the Canadian Meteorological Branch and the British Meteorological Office share the cost of a leased duplex circuit in the transatlantic cable. Altogether, the Meteorological Branch uses 55,200 miles of teletype circuits connecting 327 teletype offices.

In addition, a facsimile network connects forecast offices in all parts of the country including radio facsimile transmission to Arctic stations and ships at sea. Certain functions of the forecast offices are carried out at one central location and the processed data, in the form of weather maps, are then distributed over the facsimile network throughout the country. Chart transmissions from the Central Analysis Office in Montreal are made simultaneously to all parts of Canada. Altogether, the Meteorological Branch utilizes 11,200 miles of facsimile circuits, serving 58 forecast offices.

Subsection 6.—Federal Government Radio Communication Services

Radio in Canada traces its origin to the year 1900 when wireless telegraphy was introduced and placed under the jurisdiction of the Department of Public Works. The first commercial radio circuit was established between Chateau Bay, Que., and Belle Isle in the Strait of Belle Isle in 1901, replacing an underwater cable which was difficult to maintain. In the first days of radio there did not appear to be any necessity for special legislative control, but the growth of this new medium of communication was very rapid and the Wireless Telegraph Act of 1905 became the first legislation in Canada controlling radio communication.

Radio regulation and radio coast station services were under the jurisdiction of the Department of Public Works until 1909 at which time they were transferred to the Department of Marine and Fisheries where they remained until 1930, with the exception of the period 1914-22 when they were under the jurisdiction of the Department of Naval Services. In 1930, when a separate Marine portfolio was established, they became a Branch of that Department and then in 1936 a Division of the Air Services Branch of the newly formed Department of Transport. In 1936 an aviation radio service was organized within the Radio Division, and to it in 1948 was transferred the Government Telegraph and Telephone Service, which had been under the jurisdiction of the Department of Public Works since 1879. In 1950, the name was changed to Telecommunications Division, and later to Telecommunications and Electronics Branch.

The radio activities of the Telecommunications and Electronics Branch may be summarized as follows: (1) the administration of national and international radio laws and regulations and of regional agreements, involving the issuance of radio licences, inspection of radio stations, certification of radio equipment, examination of operators, allocation and monitoring of frequencies, study of radio wave propagation, compilation and settling of international accounts for radio messages, investigation and suppression of inductive interference to radio reception; and (2) construction, maintenance and operation of radio communication stations and radio aids to marine and air navigation.

The national and international radio laws and regulations and the regional agreements administered by the Telecommunications and Electronics Branch include: (1) the Broadcasting Act; the Radio Act and Regulations made thereunder; the radio provisions of the

Canada Shipping Act and Ship Station Radio Regulations; (2) the International Telecommunications Convention and Radio Regulations annexed thereto; the Articles of the International Civil Aviation Convention applicable to aeronautical radio requirements; that part of the International Convention for the Safety of Life at Sea applicable to radio requirements for ships; the Inter-American Telecommunication Convention; the Inter-American Radio Agreement; the North American Regional Broadcasting Agreement; the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and the Agreement between Canada and the United States of America for the promotion of safety on the Great Lakes by means of radio.

Licensing and Operation.—In all branches of radio, basic control is exercised over the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

Under the Broadcasting Act, the Board of Broadcast Governors regulates the establishment and operation of broadcasting networks, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. While the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Department. Reasonably complete and technically acceptable applications are therefore referred to the Board of Broadcast Governors by the Department. Before such a licence may be issued, the approval of the Governor in Council is also required. With these exceptions, the technical control of broadcasting stations is carried out by the Telecommunications and Electronics Branch of the Department of Transport.

The standard broadcast band is crowded with stations that are capable of interfering with one another over the entire North American region, particularly at night. A plan for the accommodation of the largest number of stations with the least interference was evolved as a result of extensive studies conducted by Canada, Cuba, the Dominican Republic, Haiti, the Bahama Islands, Mexico, and the United States and was embodied in the North American Regional Broadcasting Agreement.

Before a new standard broadcasting station can be licensed or before modifications can be made in an existing station, engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement. After the establishment or change is completed, proof of performance must be submitted to establish that the actual installation is in accordance with the approved plan.

Ten monitoring stations are maintained at suitable points across Canada to police and monitor the radio spectrum: to see that radio stations are complying with the procedure set forth for their particular service; to observe the emissions from stations and ensure that they comply with the rules applicable to their service; to detect non-licensed stations and ensure that stations are being used for the purpose for which they are licensed; to assist in the investigation of cases of inter-station interference; to make studies of spectrum occupancy with a view to finding spectrum space for new assignments; and to make precise frequency measurements to determine if the operating frequencies of all classes of radio stations are within the tolerances as prescribed by domestic and international regulations. A mobile monitoring station is being equipped to carry out the investigation of those technical and operational aspects of emissions on frequencies that cannot be monitored by stations in fixed locations.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of

equipment that comes up to the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention. Also, certain passenger, cargo, and other ships plying the Great Lakes are inspected to ensure compliance with the requirements of the agreement between Canada and the United States for the promotion of safety on the Great Lakes by means of radio.

Standards have been developed for the installation of aircraft radio stations specifying in detail the techniques and materials that may be used, to ensure that such stations will satisfactorily perform the function for which they are intended. Inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. In-flight inspections of the radio communications and navigational aspects of proposed new air carrier operations, encompassing both land and oceanic routes, are also made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile stations and the Radio Act provides that all operators, both commercial and amateur, must pass examinations to prove their ability to operate the respective classes of stations on which they are engaged. Competent operators are required on all classes of station in order that the technical requirements prescribed under international agreement be adhered to closely; they are particularly essential on ship and aircraft stations in the interests of safety of life.

Investigation and Suppression of Inductive Interference.—Under the Radio Act the use of electrical equipment that will produce harmful interference to radio reception is not permitted. The Telecommunications and Electronics Branch of the Department of Transport maintains 63 cars equipped for measuring and locating sources of interference to broadcast, television and other radio reception. In addition to locating the sources of interference, advice is given as to how it may be suppressed or eliminated. These cars operate from the permanent radio inspection offices located in 28 cities throughout Canada. During the year 1958, 18,315 sources of interference were located and suppression was obtained in all but a few cases. Power lines were the largest single source of interference, constituting 63 p.c. of the total. Apart from cases of actual interference, the Branch also gives technical advice and assistance to manufacturers of electrical apparatus, in an effort to reduce to acceptable levels the radio noise (interference) produced by such apparatus.

Recent amendments to the Radio Act provide for the prohibiting of the sale of electrical apparatus which will produce radio noise (interference) in excess of specified limits. Regulations specifying the limits to be met by particular types of apparatus are contained in the Radio Noise Limits Order.

Another recent amendment to the Radio Act provides for exemption from the operation of the Act certain low-powered radio transmitting and receiving equipment which has been so Type Approved by the Department. Exemption approval has been granted to a number of models of garage door radio controls and other devices, which consequently may be operated without the radio station licence otherwise required.

Radio Revenue.—Regulations concerning the rendering and settlement of international ship-shore traffic accounts are contained in the International Telecommunication Convention and Regulations. Sources of revenue include commercial ship and inter-station messages handled by Departmental ship and land stations, radiotelegrams exchanged by foreign ships through Canadian coast stations, private commercial traffic *via* Departmental airway radio stations, and radio services rendered to aircraft of private airline companies by such stations. During the year ended Mar. 31, 1959, accounts with a gross value of \$439,885 were handled with respect to chargeable traffic *via* Marine Radio Stations consisting of 126,512 ship-shore radiotelegrams, 61,331 point-to-point messages

and 28,804 duplex radiotelephone conversations. For air-to-ground and message communication services provided by aeronautical stations, accounts were handled with a total value of \$907,997.

8.—Radio Revenue Collected by the Department of Transport, Year Ended Mar. 31, 1959

Stations	Revenue	Stations	Revenue
	\$		\$
Marine Stations—		Other Radio Revenue—concluded	
Private commercial messages and duplex radiophone calls.....	462,275	Licence fees (excluding private commercial broadcasting).....	271,458
Premium revenue.....	18,235	Rentals.....	319,715
		Miscellaneous.....	134,678
Aeronautical Stations—		Totals.....	2,054,539
Air-to-ground and message communication services.....	842,468		
Other Radio Revenue—		Collected from issue of private commercial broadcasting licences.....	470,248
Examination fees—Radiotelegraph Operators' Certificate of Proficiency.....	5,710		

Radio Aids to Marine and Aeronautical Navigation.—Services of the Telecommunications and Electronics Branch of the Department of Transport in aid of marine and aeronautical navigation are described in the following paragraphs. Details may be obtained on request from the Department of Transport, Ottawa.

Marine Navigation.—Radio aids to marine navigation are provided for about 4,000 radio-equipped Canadian vessels and almost as many foreign ships using Canadian waters. A safety and communications service for shipping is provided covering the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, Hudson Bay and Hudson Strait.

Coast radio stations provide a safety watch and communications service for ships at sea and provide, as well, regularly broadcast weather reports, storm warnings and notices of dangers to navigation. Ships at sea may obtain medical advice from any coast station. The messages are delivered to the port medical officer of the Department of National Health and Welfare and replies are transmitted to the ship free of charge. The stations carry out communications by radiotelegraph and/or radiotelephone, and many of them provide connections to land telephone lines so that ships may communicate directly with any telephone subscriber. At Halifax (CFH) and Vancouver (CKN), shortwave facilities are furnished for world-wide communications. These stations participate in the Commonwealth long-range ship communication scheme. The coast stations on Hudson Bay and Hudson Strait, in addition to the regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions and direction finding bearings.

Coast radio direction finding stations, operated on the Atlantic Coast and on Hudson Strait, enable ships to obtain a line of bearing from the station. No charge is made for this service. A chain of automatic *radiobeacon stations* is also maintained to provide a navigational aid to mariners by transmitting signals on which bearings may be taken by ships. These stations are arranged, where possible, in groups of three, transmitting on a common frequency but in proper time sequence so as to avoid interfering with one another.

A navigator may thus obtain three bearings within three consecutive minutes and fix his location. For distance finding in foggy weather, a number of radiobeacons are synchronized with fog alarms at the same point. Ships may also request the transmission of signals from the coast stations for direction finding purposes.

Loran is a long-range radio aid to marine and air navigation which provides accurate fixes at distances up to 600 miles by day and 1,500 miles by night. Two Loran stations operate in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with Loran stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans.

Decca is a short-range radio aid to navigation which provides accurate fixes at distances up to 250 miles. Four chains of Decca stations are in operation, one in Quebec, one in Nova Scotia, and two in Newfoundland. These stations give service to ships off Newfoundland and Nova Scotia, and in the St. Lawrence River and Gulf.

Radar is a valuable aid to marine navigation and it has become general practice to equip merchant ships with this device. Important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation—one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour.

Lighthouses, particularly at locations where they would otherwise be completely cut off from summoning help in case of illness, are provided with low-powered transceivers for use in emergencies.

Aeronautical Navigation.—Radio aids to air navigation are provided from coast to coast and from the Canada-United States border to the Arctic along and off the airways, and are used by many Canadian and foreign air carriers flying over Canadian territory. Trained engineers and technicians are assigned to six regional offices located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., and Moncton, N.B., to carry out the construction and efficient operation of facilities.

The principal radio aid to air navigation provided by the Department of Transport is the low-frequency *radio range station*, located approximately every hundred miles along airways. It provides specific track guidance to pilots by means of audible signals and the signals may also be used for the purpose of obtaining direction finding bearings. In addition, radiotelephone communications are provided between ground and aircraft, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights.

Twenty very high frequency *omni-directional ranges* (VOR) are now in operation. Unlike the low-frequency radio range stations, this type of facility does not limit the aircraft using the station to one of four distinct courses but enables the pilot to select any desired course. The twenty omni-directional ranges have permitted the establishment of VOR airways west of Montreal and of thirteen trans-border airways. Eighteen additional installations are under construction and should be in operation by the autumn of 1960. Preliminary work has begun on seven others.

Aeronautical radiobeacon stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. *Fan markers*, operating on very high frequencies, are usually placed on an airway so as to inform the pilot when he may safely lose altitude after passing high terrain or to indicate accurately the distance from an airport. *Station location markers* are similar to fan markers except that the signal radiated is such that aircraft may receive the same indication irrespective of the

direction of flight. They are installed at the same location as a radio range to enable a pilot to determine when he is exactly over the station, thus obtaining definite indication of position. Station location markers are installed at most radio range sites.

Airport and airway surveillance radars (150 nautical-mile) are in operation at nine airports for air traffic control purposes. Of the six additional installations planned, five are expected to be operating before the end of 1960. A 50-mile-range surveillance radar at Gander forms part of a complete ground-controlled approach facility.

Instrument landing systems provide radio signals which, when received by special radio equipment aboard aircraft, permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low-power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. The localizer and marker transmitters operate on very high frequencies, the glide path on ultra high frequencies and the compass locators on low and medium frequencies. Thirty-one instrument landing systems are in operation.

To assist in providing communication between aircraft and ground, *aeronautical radio communications stations* are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication with both domestic and international air carriers. The international communications stations form a major contribution on the part of Canada to international aviation. Their functions may be grouped as follows: (1) communication for meteorological services; (2) communication for the air traffic control services; and (3) communication for the benefit of the airline operating agencies with their aircraft and between their despatch offices.

Subsection 7.—Other Government, Miscellaneous and Commercial Radio Communication Services

Radio services have been established by all provincial governments, mainly for police, highway and forestry protection purposes.

Municipal government departments have steadily increased their use of radio to facilitate operations particularly as a medium of communication with vehicles—police, fire, engineering, hydro, etc. In addition, the trend toward expansion in the employment of radio for urban mobile communication has shown no signs of abating. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical have participated extensively in this increase.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have considerably expanded their use of radio in both urban mobile and point-to-point radio fields.

The member companies of the Telephone Association of Canada have established and are operating coast-to-coast microwave facilities to augment existing inter-city communication services and to provide television network service. This system has a number of trans-border (Canada-United States) inter-connections and is being continually modified and extended to provide better service. The railway companies also operate a number of large microwave radio systems to facilitate their inter-city communication services.

The Telephone Association members, independent telephone companies and the railways are increasingly extending communication service, by means of radio, to northern areas where such service was previously unavailable.

In addition, the telephone companies provide an extension of land telephone service, by radio, to suitably equipped vehicles. This service is available in all major cities in Canada and along many of the nation's arterial highways. Service of a similar nature is also provided by radio to land stations of subscribers in areas not served by normal wire telephone facilities. Restricted common-carrier mobile radio service (this service to

vehicles does not permit inter-connection with the over-all telephone system, but only with specific dispatchers) is now available in most major cities in Canada as well as in a number of areas of lesser population. This latter service is provided by telephone companies as well as other common-carrier organizations.

Subsection 8.—Radio and Television Broadcasting*

Broadcasting in Canada, as it has developed over a period of some forty years, is a combination of public and private enterprise. Under the Broadcasting Act, proclaimed Nov. 11, 1958, a Board of Broadcast Governors was created consisting of three full-time members and twelve part-time members. The Broadcasting Act provides that this Board is empowered 'for the purpose of ensuring the continued existence and efficient operation of a national broadcasting system and the provision of a varied and comprehensive broadcasting service of a high standard that is basically Canadian in content and character, to regulate the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them, and provide for the final determination of all matters and questions in relation thereto'.

The Broadcasting Act also provides that the Minister of Transport must receive a recommendation from the Board of Broadcast Governors before dealing with any application for a licence to establish a broadcasting station or an application for an increase in power, change of channel or change of location of a broadcasting station, or before making any regulations or changes in the regulations under the Radio Act governing the activities of broadcasting stations.

As provided for in the Broadcasting Act, the Board of Broadcast Governors issued during 1959 the Radio Stations Broadcasting Regulations and the Radio (TV) Broadcasting Regulations. The enforcement of these Regulations is the responsibility of the Board.

Part II of the Broadcasting Act provides authority for the publicly owned Canadian Broadcasting Corporation. The Corporation, consisting of a President and a Vice-President and nine other directors appointed by the Governor in Council, is established 'for the purpose of operating a national broadcasting service'. The CBC is accountable to Parliament through a Cabinet Minister designated by the Governor in Council and is empowered to establish and maintain program networks and stations.

As of May 1, 1960, there were 29 CBC radio stations and 14 CBC television stations; 227 privately owned radio stations and 45 privately owned television stations. All the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over five networks operated by the CBC.

Radio Broadcasting Facilities.—The CBC operates three radio networks—the Trans-Canada and Dominion networks serving English-language audiences from the Atlantic to the Pacific, and the French-language network extending from Moncton, N.B., to Edmonton, Alta. As at Apr. 1, 1960, the Trans-Canada network was made up of 26 basic stations—13 CBC-owned and 13 privately owned. There were 28 supplementary stations, four of which were CBC-owned Newfoundland stations and seven of which were stations of the CBC Northern and Armed Forces Services. The Dominion network consisted of 31 basic stations of which 30 were privately owned. Nineteen supplementary privately owned stations also received Dominion network service. The French network had five basic stations, four of which were CBC-owned and one privately owned, and 20 privately owned supplementary stations.

* Prepared by the Information Services, Canadian Broadcasting Corporation, Ottawa.

Table 9 lists the broadcasting stations of the CBC radio networks.

9.—Broadcasting Stations of CBC Radio Networks, as at May 1, 1960

NOTE.—The stations marked with an asterisk (*) are CBC-owned. The symbols used in the Power column have the following meanings: D, daytime; N, night; DA-1, one directional antenna both day and night; DA-2, two directional antennae, one in daylight, the other at night; DA-N, single directional antenna used at night only. Wattage of some stations differs between day and night as shown.

CBC Northern Radio Service.—Since November 1958 six radio stations in Northern Canada have been taken over by the CBC—at Whitehorse and Dawson in the Yukon Territory, Yellowknife and Hay River in the Northwest Territories, Goose Bay in Labrador* and Fort Churchill in northern Manitoba. A seventh was built at Fort Smith and another is being constructed at Inuvik, both in the Northwest Territories. Low-power relay transmitters were installed at Fort Nelson, B.C., and Watson Lake, Y.T.

Whitehorse is linked by landline to Edmonton for network programs. Other northern stations are able to pick up and relay news and topical programs from CBC transmitters at Lacombe, Alta., Watrous, Sask., and Sackville, N.B. Greater use of facilities at Sackville during the summer of 1960 will result in the transmission of programs more extensively to the North.

Network features are provided for all stations on tapes recorded in Montreal and flown to the North on regular airline flights. The stations are staffed with local recruits wherever possible and the CBC Northern Service works closely with the educational service of the Department of Northern Affairs and National Resources.

FM Radio.—With the opening of the three-city CBC-FM network on Apr. 4, 1960, a new bilingual aspect entered Canadian network radio. The network is bilingual in the sense that each station in Toronto, Ottawa and Montreal announces the programs it originates in English or French, without translation into the other language. At the start of each day's programming, however, a program résumé is given in both English and French.

The schedule planners have placed emphasis on the best of the world's music, both popular and classical, live and recorded. CBC news, talks and commentaries in depth and great dramatic works in English and French are also presented.

For the first 18 months of its operation, the frequency modulation network will be experimental in nature. The network broadcasts during the evening hours from 7 p.m. to midnight, Monday to Friday, and from noon to midnight on Saturday and Sunday. The network links three existing CBC stations—CBC-FM in Toronto, CBM-FM in Montreal, and CBO-FM in Ottawa.

Television Broadcasting Facilities.—As of May 1, 1960, there were 59 television stations in Canada, plus 15 satellite or network relay stations. There were 35 basic television stations in operation on the English network, 10 of which were CBC-owned. On the French network, 12 stations were in operation, four of which were CBC-owned. The CBC and affiliated stations, plus supplementary stations and satellites, were located and powered as follows:—

¹Based on stations' published data.

It was estimated at the end of March 1960 that 87 p.c. of Canada's population was within range of Canadian television programs. Microwave facilities linking television stations from coast to coast for instantaneous telecasting of programs went into full operation July 1, 1958. In June 1959 these facilities were extended from Sydney, N.S., to St. John's, Nfld., providing a direct visual link between all ten provinces. When television broadcasting began in September 1952, television sets in use in Canada totalled 146,000. One year later the number had tripled and by March 1960 it was estimated that programs of the CBC networks could be viewed in approximately 3,400,000 Canadian homes.

Canadian Broadcasting Corporation Service.—The Corporation's Head Office is located at Ottawa and provides over-all direction for the English and French language television and radio services through the CBC's nine operating divisions: British Columbia; Prairie, Quebec and French networks; Ottawa Area; Maritimes; Newfoundland; Northern and Armed Forces Services; and the International Service. To give expression to varying interests across Canada, the CBC maintains offices and production facilities at St. John's and Corner Brook, Nfld., Sydney and Halifax, N.S., Moncton, N.B., Chicoutimi, Quebec City and Montreal, Que., Ottawa, Toronto and Windsor, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver and Prince Rupert, B.C.

Domestic Radio Program Service.—During the year ended Mar. 31, 1959, about 1,500 programs representing 495 hours of broadcasting were presented each week over the CBC's Trans-Canada, Dominion and French networks. Of the total broadcasting hours in 1958-59, 71 p.c. were released on the Trans-Canada network; the Dominion network released 6 p.c. and 23 p.c. were carried on the French network.

The CBC originated and produced 94 p.c. of its network broadcasts. Of the remainder, 1 p.c. came from the private stations, 1 p.c. were exchange programs from the United States, 2 p.c. from the United Kingdom, and 2 p.c. came from other countries. An analysis of network programs by categories for 1958-59 shows that a large proportion of CBC radio network time was devoted to music—an estimated 38 p.c.; 57 p.c. of programs were pre-

dominantly entertainment (music, drama, sports, etc.); 26 p.c. were predominantly information programs (news and weather, farm and fisheries, science, nature, etc.); and 17 p.c. were predominantly idea or opinion programs.

Domestic Television Program Service.—During the year ended Mar. 31, 1959, the CBC English-language television network presented 59 hours per week of programs. Of this, 59 p.c. was produced by CBC; 36 p.c. was drawn from sources in the United States; 2 p.c. from other Canadian sources; 1 p.c. from the United Kingdom; and 2 p.c. from other countries. Of the 70 hours presented each week on the French network, 66 p.c. originated with the CBC; 3 p.c. with other Canadian sources; 18 p.c. with sources in France; 4 p.c. in the United States; 2 p.c. in the United Kingdom; and 7 p.c. in other countries.

CBC International Service.—The International Service of the Canadian Broadcasting Corporation broadcasts news, news reports, commentaries, interviews, talks, accounts of special events, actualities, and other programs that tell people in other lands about life in Canada. The headquarters and studios are in the Radio-Canada Building in Montreal and the two 50-kw. shortwave transmitters and antenna arrays are in Sackville, New Brunswick. The programs are transmitted directly by shortwave to listeners in sixteen languages—English, French, German, Dutch, Italian, Danish, Norwegian, Swedish, Czech, Slovak, Russian, Ukrainian, Polish, Hungarian, Spanish and Portuguese. A recorded program service is provided regularly to radio organizations in Austria, Finland and Greece. As required, all radio organizations throughout the world are provided with special relays and recorded programs.

The International Service also provides a Transcription Service to radio organizations in other countries. This consists of music and spoken-word recordings on long-playing discs. The music transcriptions feature the works of Canadian composers, performers, arrangers, conductors and orchestras. The spoken-word transcriptions, in the English, French and Spanish languages, include programs that deal with Canadian drama, history, biography, folklore, documentaries and literature.

In addition to their use for the regular programs of the International Service, the shortwave transmitters at Sackville are employed to provide programs for people living in Canada's Far North and for relay to the members of Canada's Armed Forces stationed abroad. On special occasions, the regular facilities of the International Service are supplemented by commercial radio-telephone facilities to provide simultaneous service to areas of the world beyond the range of the signal from Sackville.

More than 400,000 letters, cards and reception reports have been received from listeners since the official inauguration of the International Service on Feb. 25, 1945. Replies are sent in the language of the letter-writer and a great variety of printed and illustrated information on all aspects of life in Canada is provided. An illustrated Program Schedule is distributed periodically to some 200,000 listeners around the world.

In addition to its international shortwave service, the CBC maintains two domestic shortwave stations—CBNX at St. John's, Nfld., and CBUX at Vancouver, B.C.—for the purpose of extending coverage of the existing standard band stations CBN and CBU.

Canadian Broadcasting Corporation Finances.—Table 15 is a statement of CBC finances for the year ended Mar. 31, 1959. During that year the Corporation supplemented its income from the public treasury by a record \$32,093,505 from commercial revenue. The development of the national television service and general price rises continued to make heavy demands on increased revenues.

15.—Financial Statement of the CBC, Year Ended Mar. 31, 1959

Item	Amount
	\$
Income—	
Commercial revenue.....	32,093,505

	54,120,031

¹ Included are \$57,000 for executive officers' remuneration, \$14,400 for honoraria to directors and \$33,600 for legal expenses.

Privately Owned Stations.—As already stated, privately owned broadcasting stations are subject to the Radio Act, the Canadian Broadcasting Act and Regulations made thereunder, and the provisions of the Radio Regulations annexed to the International Telecommunication Convention and Regional Agreements in effect in Canada. Since Mar. 31, 1923, private commercial broadcasting station licences have been required by government regulation and both sound and television broadcasting stations are now authorized by this class of licence.

Any application for a licence to establish a new private station or for an increase in power, change of channel, or change of location of any existing private station must be referred by the Minister of Transport to the Board of Broadcast Governors; the Board, after giving public notice thereof in the *Canada Gazette*, will make such recommendations to the Minister of Transport as it may deem fit. The approval of the Governor in Council must be obtained before any licence for a new private station is issued. Private commercial broadcasting station licences are conditional upon the ownership or control of the stations, and none of the shares of capital stock of licensed private companies nor the control of licensed public companies may be changed without the permission of the Minister of Transport having been first obtained upon the recommendation of the Board of Broadcast Governors. The Radio Stations Broadcasting Regulations require all broadcasting stations to present to the Board at the end of each week a program log for that week indicating the total programming carried by the station. Organizational and financial statements are filed annually, on a confidential basis, with the Department of Transport.

The first sound broadcasting in Canada took place when a privately owned communications company in Montreal was authorized to transmit programs on an experimental basis during the latter part of 1918 and in the winter evenings of 1919 over its Station XWA. Under the first licensing regulations in the year ended Mar. 31, 1923, 34 licences were issued. By Mar. 31, 1960, the number had increased to 258, of which 221 were AM standard band stations, 29 were frequency modulated stations and eight were shortwave stations. Of the 221 standard band stations, 15 were operating with a power of 50,000 watts, 46 with 10,000 watts, 44 with 5,000 watts, one with 2,500 watts, 72 with 1,000 watts, one with 500 watts, 40 with 250 watts, one with 150 watts and four with 100 watts.

A privately owned broadcasting station is required to pay to the Receiver General of Canada an annual licence fee based on the gross revenue for licence fee computation for the fiscal year of the station. Because the fiscal years of the privately owned stations end at different dates, it is difficult to estimate the gross revenue of all stations for any one year. The Report of the Royal Commission on Broadcasting published in 1957 indicates that gross sales for 144 broadcasting stations amounted to approximately \$36,000,000 in 1955, all of which was obtained from commercial advertising.

The first privately owned television broadcasting station in Canada located at Sudbury, Ont., was authorized to commence scheduled broadcasting on Oct. 20, 1953. By May 1, 1960, 45 privately owned television stations were in operation (see Table 12).

Section 2.—The Post Office

The Canada Post Office Department was created at the time of Confederation in 1867 by the Canada Post Office Act to superintend and manage the postal service of Canada under the direction of a Postmaster General. For almost a century before Confederation, postal services in the Canadian provinces had been controlled by the British Postmaster General and administered by his deputies. Under the French régime a courier service had been organized as early as 1703 between Quebec, Trois Rivières and Montreal. In 1734 a post road was constructed over the same route and post houses, complete with post horses and vehicles, were established for the use of travellers. In 1851 the control of their post offices was assumed by the different provinces of British North America and at Confederation these systems merged to form the Canada Post Office.

Functions.—The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with security and dispatch. In discharging these duties it maintains post offices and utilizes air, railway, land and water transportation facilities. Associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting for COD articles, and the transaction of money order and Post Office Savings Bank business. Because of its widespread facilities, it has been found expedient for the Post Office to assist other government departments in the performance of certain tasks including the sale of unemployment insurance stamps, the collection of government annuity payments, the distribution of income tax forms and Civil Service employment application forms, and the display of government posters.

Post offices are established wherever the population warrants. Those in rural areas and small urban centres transact all of the functions of the city office. In larger urban areas postal stations and sub-post offices have full functions similar to the main post office, including a general delivery service, lock-box delivery and letter-carrier delivery.

At Mar. 31, 1959, there were 11,634 post offices in operation compared with 11,768 in 1958. Letter-carrier delivery, performed in 152 urban centres, employed over 6,690 uniformed letter carriers. Postage paid in 1958-59 by means of postage stamps amounted to \$82,008,654 as compared with \$81,192,007 in 1958. Post office money orders, issued for any amount not exceeding \$100 and payable in almost any country of the world, were sold at more than 8,000 post offices and money orders payable in Canada only, for amounts not exceeding \$16, were sold at some 2,800 additional post offices. Post Office Savings Banks operate in all parts of the country and, on Mar. 31, 1959, had total deposits of \$34,155,617.

Organization.—The Canada Post Office includes an Operating Service and Headquarters at Ottawa. The Operating Service is organized into four regions, each under a Regional Director who is the field representative of the Deputy Postmaster General. There are seven Headquarters Branches: Administration, Operations, Transportation, Comptroller's Branch, Engineering and Development, Financial, and Personnel—each under a Director. Operating and secretarial features in the operating field affecting the post offices and local mail services in urban centres are taken care of by the local postmaster. District office functions relating to services in the district and all inspections and investigations are under District Directors of Postal Services in strategic centres across the country.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont. (the most southerly inhabited point of Canada) to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily and constitutes a great air artery from St. John's, Nfld., to Victoria, B.C., intersected by branch lines and connecting lines radiating to every quarter and linking up with the United States airmail system. Since July 1, 1948, all first class domestic mail up to and including one ounce in weight has been carried by air between one Canadian point and another, whenever delivery can thus be expedited. On Apr. 1, 1954, this service was extended to first class items up to and including eight ounces in weight. Air stage service provides the only means of communication for many areas in the hinterland. There were approximately 39,633 miles of airmail and air stage routes in Canada in 1959 as compared with 38,334 miles in 1958.

The principal means of mail transportation is the railway mail service that operates along about 26,530 miles of track and, in 1959, covered over 37,525,000 service-miles. A staff of 792 mail clerks prepared the mails for prompt delivery and dispatch while en route in the railway mail cars.

The rural mail delivery organization provided direct postal service over approximately 5,521 rural mail routes in 1959, extending over 135,000 route-miles and serving 494,865 rural mail boxes. Rural mail routes are generally circular in pattern and average about 24.9 miles in length. Considerable progress has been made towards the development of mail service by means of group boxes—a service intended for the more densely populated rural areas and for suburban residents not within the area of letter-carrier

delivery service. About 2,927 side services were in operation in 1959 to transport mail between post offices, railway stations, steamer wharves and airports, and 2,090 stage services operated to convey mail to and from post offices not located on railway lines. Transportation of mail by motor vehicle on highways is being developed and over 331 such services are in operation, many of them replacing or reducing conveyance by rail. A local exchange of mails between offices on the route is effected by way-mail wallet. In 1959 there were approximately 806 city mail services transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. The 10,538 land-mail service couriers employed travelled approximately 50,000,000 miles during the year. Land-mail services are performed under a contract system, the contracts being awarded to the person submitting the lowest tender and competent to provide all the requisite equipment.

Coastal mail service is conducted by 28 contractors who operate as far north along the West Coast as Alaska and on the East Coast to the northern part of Labrador.

Post Office Statistics.—Tables 16, 17 and 18 give the numbers of post offices in operation together with revenue and expenditure for recent years.

16.—Post Offices in Operation, by Province, as at Mar. 31, 1956-59

Province or Territory	1956	1957	1958	1959

The increase in postal business is one of the impressive features of Canada's economic development during the past ten years. Gross revenue for the year ended Mar. 31, 1959 reached an all-time high.

17.—Revenue and Expenditure of the Post Office Department, Years Ended Mar. 31, 1950-59

NOTE.—Figures from 1868 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Gross Revenue	Net Revenue ¹	Expenditure ²	Surplus (+) or Deficit (-)
	\$	\$	\$	\$
1950.....	101,277,435	84,528,655	82,639,741	+1,888,914

1959.....	183,380,508	157,630,336	157,803,478	-173,142

¹ Gross revenue less commissions and allowances to postmasters, and other smaller items.
rental of service staff and staff post offices.

² Excludes

The gross revenue receipts shown in Table 17 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during each of the latest five fiscal years was: \$74,583,720 in 1954-55, \$75,559,106 in 1955-56, \$77,735,659 in 1956-57, \$81,192,007 in 1957-58 and \$82,008,654 in 1958-59. Receipts from postage meter or postage register impressions and postage paid in cash by other means were as follows: \$65,516,441 in 1954-55, \$70,696,501 in 1955-56, \$78,041,479 in 1956-57, \$83,706,744 in 1957-58 and \$87,920,080 in 1958-59.

18.—Gross Postal Revenue of Post Offices Collecting Upwards of \$10,000, Year Ended Mar. 31, 1959

NOTE.—Money order commissions are not included in gross postal revenue. Provincial totals of postal revenue include post offices not separately listed.

Auxiliary Postal Services.—Auxiliary postal services include the issuing of money orders and the operation of the Post Office Savings Bank.

Table 19 shows the amount of money order business conducted by the postal service in recent years. A table showing the financial business of the Post Office Savings Bank will be found in Chapter XXIV on Currency and Banking.

19.—Operations of the Money Order System, Years Ended Mar. 31, 1950-59

Section 3.—The Press

An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 to (circa) 1900. A second article appearing in the 1959 edition brings that account up to the date of writing (1958). The complete presentation is available in reprint form from the Dominion Bureau of Statistics.

Daily newspapers published in Canada numbered 113 in 1959, counting morning and evening editions separately. They had an aggregate reported circulation of close to 4,000,000—about 81 p.c. in English, 17 p.c. in French and the remainder in other languages. Twelve of the daily newspapers enjoying circulations in excess of 100,000 accounted for more than half of the circulation. French dailies, as would be expected, have their widest circulation in Quebec where 10 of the 12 in existence in 1959 were published. Some of the largest of these papers have been established in that province for over 60 years. Foreign-language publications, shown in Table 24, are gaining in circulation as a result of recent heavy immigration.

Weekly newspapers serve more people in rural communities than do the dailies. They cater to local interests and exercise an important influence in the areas they serve.

The Canadian Press, a co-operative organization owned and operated by Canada's daily newspapers, provides its 100 members with world and Canadian news and news photographs, mostly by means of teletype and wirephoto transmission. It also serves weekly newspapers and radio and television stations. It is, in effect, a partnership through which each member newspaper provides to its fellow members the news of its particular area and through which the general news of the world is brought to Canada. Cost of editing and transmission is divided among members according to the population of the cities in

which they publish. CP gets world news from Reuters, the British agency, and from the Associated Press, the United States co-operative, and these agencies have reciprocal arrangements with CP for their coverage of Canada.

The British United Press is a limited company in Canada and maintains a close association with the United Press International, of which it is an affiliate. From its headquarters in Montreal and its 12 Canadian bureaus, it serves directly (1960) North America, South America, Europe and Australia with news from Canada, as well as 185 subscribers including 58 private broadcasting stations in Canada. Agence France Presse maintains offices in Montreal and Ottawa and certain foreign newspapers have agencies in Ottawa to interpret Canadian news for their readers.

Press Statistics.—The following tables are based on data estimated from *Canadian Advertising*. One serious difficulty has been encountered in connection with the compilation of circulation figures. Reliable circulation figures are relatively easy to obtain for daily newspapers because, in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements: for these, A.B.C. 'net paid' figures have been used. However, it is difficult to obtain reliable circulation figures for many weekly newspapers and for magazines, and those shown in the following tables should be used with reservations.

**20.—Estimated Numbers and Circulations¹ of reporting Daily and Weekly²
English-Language Newspapers, by Province, 1957-59**

Note.—Figures from 1945 will be found in the corresponding table of previous Year Books beginning with the 1947 edition.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated; it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including amusement services, such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The index will be found useful in this respect.

Section 1.—Merchandising and Service Establishments*

Complete coverage of the business of wholesale and retail trades and of service establishments is attempted only as part of the decennial census. The first such detailed survey was taken in connection with the 1931 Census and related to business transacted during the calendar year 1930. Similar detailed records were again secured with the 1941 and 1951 Censuses. The results of the 1930 and 1941 Censuses of Merchandising and Service Establishments are contained in Vols. X and XI of the Census reports for those years and the results of the 1951 Census of Distribution in Vols. VII and VIII of the 1951 Census reports. Summary data for 1951 are given in the 1955 Year Book, pp. 953-977.

The information collected at the census is supplemented in intercensal years by monthly, quarterly and annual surveys on the more important phases of the retail, wholesale and service trades—sample surveys for some businesses and full coverage for others. The 1951 Census formed a new base for such surveys and certain improvements have been implemented for continuance during the 1951-61 intercensal period.

Current information available on the more important phases of the distributive trades is given in the following Subsections. Estimates for the years prior to 1951 have been revised in accordance with the census base.

Subsection 1.—Wholesale Trade

Wholesale Sales.—Estimated sales of wholesalers expanded from \$5,784,400,000 in 1951 to \$7,643,500,000 in 1958. These figures include only wholesalers proper, i.e., they exclude agents and brokers and manufacturers' sales branches. Sales estimates are subject to revision and have not been adjusted for price changes.

* Prepared in the Merchandising and Services Section of the Industry and Merchandising Division, Dominion Bureau of Statistics.

1.—Wholesale Sales, by Kind of Business, 1955-58

NOTE.—Includes only wholesalers proper, i.e., firms performing the function of buying merchandise on their own account for resale. Figures for 1955-57 in this table have been revised since the publication of the 1959 Year Book.

Operating Results of Wholesalers.—The latest survey of operating results of wholesalers, which show for certain trades operating expenses and profits in ratio to net sales, is for the year 1957. Summary data obtained at that survey are given in Table 2; detailed information for individual trades is given in DBS bulletins.

2.—Operating Results of Selected Wholesale Trades, 1957

Subsection 2.—Retail Trade

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply. The estimated value of retail sales nearly doubled in the ten years 1949-58. Estimates, not adjusted for price changes, are shown by province in Table 3 for 1930 and 1941-58 and by kind of business for the latest five years in Table 4.

3.—Retail Trade, by Province, 1930 and 1941-58

NOTE.—Figures for 1931-40 are given in the 1957-58 Year Book, p. 938.

Retail Chain Stores.—Retail chains are defined as companies operating four or more retail outlets in the same or related kinds of business. A consistent rise in sales has been evident since statistics were first compiled on chain store operations in 1930.

5.—Retail Chain Store Statistics, 1930 and 1941-53

¹ Includes other kinds of business not shown separately.

Operating Results of Retail Chain Stores.—A survey of the operating results of retail chain stores is carried out every second year. The latest figures available at time of printing are those for 1957. In that year six of the ten selected trades registered smaller ratios of net operating profit than those obtained in 1955.

7.—Operating Results of Retail Chain Stores for Selected Kinds of Business, 1957

(Percentage of Net Sales)

Kind of Business	Gross Profit	Salaries and Wages	Occupancy Expenses ¹	Total Operating Expenses ²	Net Operating Profit	Net Non-trading Income	Net Profit before Income Tax

¹ Includes taxes and insurance, light, heat and power, repairs, maintenance, depreciation (except on delivery equipment) and rentals on rented premises. ² Includes salaries and wages and occupancy expenses. ³ Net non-trading expense. ⁴ Net operating loss.

Operating Results of Independent Retail Stores.—Operating results in the form of ratios to net sales are shown in Table 8 for eight trades. This series, formerly alternated with one for retail chain stores, is now on a biennial basis within the independent store category, i.e., one-half of the trades were surveyed for 1958 as shown in Table 8 and the remaining selected trades were surveyed for 1959; results for the latter were not available at the time of printing. They include the following kinds of business: furniture, household appliances, hardware, restaurants, fuel dealers, drug, jewellery, tobacco, filling stations and garages.

8.—Operating Ratios of Independent Retail Stores, by Kind of Business, 1958

(Percentage of Net Sales)

¹ Excludes delivery and, for unincorporated stores, also excludes proprietors' salaries.

² Includes taxes and insurance, light, heat and power, repairs, maintenance, depreciation (except on delivery equipment) and rentals on rented premises.

³ Includes salaries and wages and occupancy expenses.

⁴ Includes, for unincorporated stores, proprietors' salaries or withdrawals.

New Motor Vehicle Sales.—Retail sales of new motor vehicles reached their peak level in 1956, dropping 5.9 p.c. in 1957 and an additional 0.3 p.c. in 1958. In the latter year, trucks and buses declined 10.8 p.c. in number with a corresponding decrease in value but, while new passenger car sales dropped 1.4 p.c. in number, their value rose by 2.1 p.c.

9.—Retail Sales of New Motor Vehicles, 1949-58

Farm Implement Sales.—Sales of new farm implements and equipment in Canada reached \$172,014,000 in 1958, a record level 15 p.c. above the previous year and 0.7 p.c. above the previous peak of 1956. Gains were evident in all major groups in 1958 and in all provinces. In addition to the above total, repair parts sold for \$33,978,663.

Sales Financing.—Instalment financing undertaken by sales finance companies in 1958 continued the decline shown in the previous year from the record high of 1956. The decrease was evident in both the consumer and commercial sectors and was attributable mainly to the lower amount of paper purchased covering the sales of new passenger and commercial vehicles. It is noteworthy that balances outstanding at the end of 1958 were at their lowest level since 1955.

Consumer Credit.—Balances outstanding on credit extended to consumers by retail stores and certain financial institutions are increasing very rapidly. Although the financial institutions included in the survey do not cover all sources of consumer credit, returns from the selected holders indicate that balances outstanding on credit extended to individuals for the purchase of consumer goods and services have more than doubled in the past eight years. The figures of Table 13 do not include credit extended for commercial purposes.

13.—Balances Outstanding on Retail Trade Credit and Loans Extended to Individuals for Non-business Purposes by Certain Financial Institutions, 1951-58

(Millions of Dollars)

Retail Credit.—The estimated amount of credit granted by retail stores during 1958 was slightly below the 1957 total. At the same time, accounts outstanding at Dec. 31, 1958 were slightly higher than at the end of 1957 and thus remained over the billion-dollar mark. This figure is the amount of accounts receivable on the books of retail establishments at the end of the year and does not include the instalment credit extended by retailers but sold to sales finance companies.

¹ Includes instalment.

Subsection 3.—Service Establishments

Service establishments as defined in the Census of Distribution included all those places of business where the major part of gross income (annual turnover) was derived from the rendering of services as opposed to the sale of merchandise. The following types of service were covered: amusement and recreation such as motion picture theatres and producers, and bowling alleys; personal services such as laundries and dry-cleaning plants, barber shops and shoe repair shops; certain business services such as advertising agencies and window display services; repair services such as automobile repair, radio repair and watch repair; burial services; photography, commercial and portrait; hotels and tourist camps; and other services such as cold storage locker rentals and taxis.

Summary statistics of the detailed coverage in 1951 are given in the 1955 Year Book at pp. 974-977. Annual data for certain services only are included here.

Theatres.—The receipts of motion picture theatres increased steadily up to 1953 when they amounted to \$108,603,966, but thereafter decreased each year to \$81,393,078 in 1958. Drive-in theatres, the most recent of theatre developments, appear to have reached their peak in 1954 with receipts of \$6,316,947; receipts amounted to \$6,254,410 in 1958.

15.—Motion Picture Theatres and Receipts, by Province, 1955-58

NOTE.—Figures for 1955 and 1956 include regular and drive-in theatres together with community organizations providing motion picture entertainment such as churches, lodges, boards of trade, etc., but exclude halls serviced by itinerant operators; figures for 1957 and 1958 cover regular and drive-in theatres only. Receipts are exclusive of amusement taxes.

Motion Picture Production.—Table 17 shows the operations of private firms in the production and printing of motion picture films and film strips for industry, government, education, entertainment, etc. Films are also produced by government agencies

but information concerning such production is, of course, not available. In addition, five firms in other business categories produced films in 1958 (one feature, seven television and 18 other non-theatrical, 288 newsreel and 21 commercial advertising) which brought them a revenue of \$101,000.

17.—Summary Statistics of Motion Picture Production by Private Firms, 1952-59

¹ Figures from 1956 include laboratories with no motion picture production; these are not included in previous years.

Table 18 shows types of film produced by private industry, classified by major producing region, and by government agencies during 1958 and 1959. Of the total of 514 films of five minutes or longer produced by private industry in 1959, 40 television and 15 other non-theatrical films were adaptations or language versions of original films; 11 were made for other than Canadian sponsors. Of the government films, 20 theatrical shorts, 10 television and 61 other non-theatrical films of five minutes or longer were adaptations or language versions of original films and one film was produced for a sponsor from outside Canada.

Private industry and government agencies together printed 47,978,205 feet of 16mm. film in black and white, 7,802,333 feet of 16mm. film in colour, and 21,200,275 feet of 35mm. film in black and white.

Section 2.—The Marketing of Agricultural Products

A special article covering the general movement of farm-produced foods from producer to consumer, with the exception of the grain trade and livestock, appears in the 1956 Year Book, pp. 917-922. Grain and livestock marketings are dealt with in detail in Subsections 1 and 2 following.

Subsection 1.—Grain Trade

Marketing Problems and Policies, 1957-58

Exports of the five major Canadian grains in the crop year 1957-58 were some 14 p.c. above the 1956-57 level while production, marketings and commercial and farm carryover each registered decreases. Growing conditions were generally excellent in Quebec, Ontario and British Columbia while dry weather prevailed in the Maritime and Prairie Provinces. Although harvesting conditions were reasonably satisfactory, the impact of summer drought in the Prairie Provinces caused production of most small grains to fall below 1956 levels. Marketings of wheat, oats and barley continued under the compulsory crop year pools system of the Canadian Wheat Board. All grains in Eastern Canada and rye and flaxseed in Western Canada continued to be traded on the open market.

On July 23, 1957, the Canadian Wheat Board announced the main features of the delivery quota policy for the 1957-58 crop year. As in the preceding crop year, an initial unit quota of 100 units was to be effective at local delivery stations. A permit holder was entitled to deliver a maximum of 300 bu. of wheat (other than Durum) or 800 bu. of oats or 500 bu. of barley or 500 bu. of rye or any combination of these grains which, when calculated on the unit basis, did not exceed 100 units. Deliveries of Durum wheat and flaxseed were subject to an initial quota of 5 bu. per seeded acre, effective Aug. 1. The initial unit quota was followed by general delivery quotas, based upon bushels per specified acreage.

On Feb. 20, 1957 the Board had announced that commencing with the 1957-58 crop year cultivated grasses and legumes grown as forage crops would be included in the specified acreage total for general quota delivery purposes. Therefore, effective Aug. 1, 1957, the "specified acreage" for delivery purposes consisted of each permit holder's acreage seeded to wheat (other than Durum), oats, barley and rye as well as summerfallow and eligible acreage seeded to cultivated grasses and forage crops. The final quota summary for the 2,071 shipping points in the Western Division showed that at July 31, 1958 a total of 1,718 points were on a quota of 7 bu. per specified acre, 321 were on a 6-bu. quota, while 32 stations were reported as "closed". Two supplementary delivery quotas on Durum wheat were authorized during the crop year, with the second authorization of 3 bu. effective June 2, raising the total delivery quota on Durum wheat to 11 bu. per seeded acre, with a minimum delivery of 400 bu. During the crop year a number of supplementary delivery quotas were issued on barley, rye and flaxseed, with the flaxseed quota, based on seeded acreage, being declared open as at Nov. 7, 1957. The amount of grain marketed under these special authorizations was, of course, in addition to the quantities of oats, barley and rye which producers chose to deliver under the initial and general quota policies.

Total marketings of the five major grains in Western Canada during 1957-58 amounted to 576,000,000 bu., representing a decrease of 2 p.c. from the comparable 1956-57 total of 585,400,000 bu. but 1 p.c. greater than the ten-year (1946-47—1955-56) average of 571,100,000 bu. Combined exports of the same grains, including wheat flour, rolled oats and oatmeal, malt and pot and pearl barley in grain equivalent, amounted to 445,900,000 bu., 14 p.c. greater than the 1956-57 comparable total of 391,600,000 bu. and 20 p.c. more than the 1946-47—1955-56 average of 371,300,000 bu. Carryover stocks of the five principal grains in all positions at July 31, 1958 were estimated at 928,200,000 bu., 17 p.c. less than the 1957 figure of 1,124,300,000 bu. but almost double the ten-year average of 465,000,000 bu.

22.—Supply and Disposition of Canadian Grain, Crop Years Ended July 31, 1957 and 1958

² Less than 50,000 bu. ³ Export data for wheat, oats and barley, respectively, include bagged seed wheat, wheat flour in terms of wheat, rolled oats and oatmeal in terms of oats and malt and pot and pearl barley in terms of barley.

⁴ Includes human food, seed requirements, industrial use, loss in handling and animal feed.

Wheat.—Supply and Disposition.—Stocks of wheat on hand at the beginning of the 1957-58 crop year were at the record level of 733,500,000 bu., 27 p.c. above those of the preceding year. Total crop year supplies, consisting of carryover stocks plus the 1957 production of 385,500,000 bu. and imports of 1,000 bu., amounted to some 1,119,100,000 bu. and were exceeded only by the 1956-57 record level of 1,152,800,000 bu. Carryover stocks at the end of the 1957-58 crop year, reflecting smaller total supplies as well as increased exports and domestic disappearance, amounted to 639,500,000 bu., a decline of 13 p.c. from the carryover at July 31, 1957.

¹ Includes bagged seed wheat and wheat flour in terms of wheat.

² Less than 50,000 bu.

Price and Marketing Arrangements.—Marketing of western Canadian wheat during the crop year 1957-58 was again conducted by the Canadian Wheat Board on a one-year pool basis, with the initial payment set at \$1.40 per bu., basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. The initial payment for No. 1 C.W. Amber Durum was established at \$1.50 per bu. No adjustment payments on the 1957-58 deliveries were made during the crop year but on Feb. 25, 1959 an interim payment on the 1957-58 pool account for wheat was announced, amounting to 10 cents per bu. for all grades except high-quality milling grades of Durum for which the interim payment was 15 cents. The full amount of this payment was some \$38,800,000. The final payment on the 1957-58 pool was announced on June 5, 1959, and averaged 8.989 cents per bu. on farmers' deliveries of 376,900,000 bu. Prior to deductions of the Prairie Farm Assistance Act levy, the net price realized by producers in the 1957-58 pool for No. 1 Northern wheat, basis in store Fort William-Port Arthur or Vancouver, was \$1.62120 per bu.

The crop year 1957-58 coincided with the second year of the third three-year International Wheat Agreement. Under its provisions Canada had a guaranteed export quota of 100,100,000 bu. for 1957-58 and, according to the final report on the year's transactions, Canadian sales under the Agreement totalled 78,000,000 bu. Sales under the Agreement were quite widely distributed, with 24 of the 42 importing countries included in the pact purchasing wheat and/or flour from Canada. The larger purchasers from Canada under the Agreement were as follows: the Federal Republic of Germany, 25,500,000 bu.; the Netherlands, 15,900,000 bu.; Japan, 13,200,000 bu.; Switzerland, 6,600,000 bu.; Norway, 3,400,000 bu.; Belgium, 2,300,000 bu.; and the Philippines, 2,300,000 bu. The greater part of Canada's wheat trade during 1957-58 was carried on in Class II wheat (i.e., wheat exported outside the provisions of the International Wheat Agreement). The United Kingdom remained the leading importer of Class II Canadian wheat, shipments to that country amounting to 90,300,000 bu. of wheat as grain and the equivalent of an additional 13,700,000 bu. in the form of wheat flour. Total Canadian exports of wheat and wheat

flour combined amounted to 320,300,000 bu., an increase of 21 p.c. over the 264,400,000 bu. exported in 1956-57. The 1957-58 exports consisted of 279,900,000 bu. of wheat as grain and the equivalent of 40,400,000 bu. in the form of wheat flour. Total domestic (commercial and farm) disappearance of wheat in 1957-58 amounted to 159,300,000 bu. and exceeded both the 1956-57 figure of 154,800,000 bu. and the ten-year (1946-47—1955-56) average of 150,700,000 bu. The carryover at July 31, 1958 amounted to 639,500,000 bu. and represented a decline of 13 p.c. from the record 1957 total of 733,500,000 bu.

During the crop year 1957-58 domestic sales of all classes of wheat were made at the same prices as those prevailing for wheat sold under the International Wheat Agreement. Class II prices for all grades of wheat, except Durum, coincided with the IWA and domestic quotations. The average Class II price received for No. 1 C.W. Amber Durum during the crop year was only $1\frac{1}{4}$ cents per bu. above the comparable IWA and domestic average price of \$1.94 $\frac{1}{2}$.

Other Grains.—*Supply and Disposition.*—Data re supply and disposition of the major Canadian grains for the crop years 1957-58 and 1956-57 are given in Table 22. With the exception of rye, carryover stocks of each of the five principal Canadian grains were higher in 1957 than in 1956. The effect of larger carryovers, however, was more than offset by decreases in production, with rye again being the exception. In the case of rye, the decline in carryover was greater than the increase in production. The combined total estimated domestic supplies of wheat, oats, barley, rye and flaxseed in 1957-58 amounted to 2,134,000,000 bu., representing a decline of 5 p.c. from the comparable 1956-57 figure of 2,239,000,000 bu.

Largely reflecting a decrease in flaxseed exports which generally offset an increase in the movement of oats, the combined export movement of oats, barley, rye and flaxseed in the crop year 1957-58 amounted to 125,600,000 bu. compared with the 1956-57 level of 127,200,000 bu. The export movement of Canadian oats, including rolled oats and oatmeal, climbed from 18,700,000 bu. in 1956-57 to 26,200,000 bu. in 1957-58. The 80,300,000 bu. of barley and its products exported in 1957-58 represented a decrease of 2 p.c. from the 1956-57 level but was still the fifth largest on record. Exports of Canadian rye in the crop year 1957-58, at 5,400,000 bu., showed relatively no change from the 1956-57 total. Shipments of Canadian flaxseed to overseas destinations declined sharply from the 1956-57 record level of 21,600,000 bu. to a total of 13,700,000 bu. in 1957-58.

Reflecting a combination of smaller total supplies and increased disappearance (exports plus domestic use) of both oats and barley in 1957-58, considerable reductions occurred in July 31 carryover stocks of each of these grains. Although exports of rye in 1957-58 were relatively unchanged from the preceding year, the effect of smaller total supplies and increased domestic disappearance caused a substantial decline in July-end carryover stocks of this grain. Sharply reduced supplies of flaxseed more than offset declines in both exports and domestic disappearance and as a result the July 31, 1958 carryover of this crop was also below the 1957 level.

Price and Marketing Arrangements.—Marketing of western Canadian oats and barley was again carried on through compulsory crop-year pools, administered by the Canadian Wheat Board. The initial payment for oats in the 1957-58 crop year, basis No. 2 C.W., in store Fort William-Port Arthur, was 60 cents per bu., compared with 65 cents per bu. in 1956-57. The initial payment for barley, basis No. 3 C.W. Six-Rew, in store Fort William-Port Arthur, at 96 cents per bu., was unchanged from that of 1956-57. No interim payments were made on either grain during the crop year but final payments were announced on Mar. 25, 1959. The final payment on the 116,400,000 bu. of barley delivered

to the 1957-58 pool averaged 5.258 cents per bu. after deduction of payment expenses and the 1-p.c. PFAA levy. Total prices (basis in store Fort William-Port Arthur) realized by producers for representative grades after deducting carrying charges in country and terminal elevators, Board administrative costs, etc., but before deducting the 1-p.c. PFAA levy were \$1.03341 per bu. for No. 3 C.W. Six-Row barley, and \$0.89108 per bu. for No. 1 Feed barley. Final payment on the 57,800,000 bu. of oats delivered to the 1957-58 pool averaged 3.582 cents per bu. Total prices realized by producers for representative grades, on the same basis as for barley, were \$0.67369 per bu. for No. 2 C.W. and \$0.58164 per bu. for No. 1 Feed oats.

Some 7,400,000 bu. of rye and 15,300,000 bu. of flaxseed were delivered by farmers in Western Canada in 1957-58, both of these grains being sold on the open market. In Eastern Canada, where commercial grain production is on a much smaller scale, all grain continued to be sold on the open market.

Miscellaneous Grain Trade Statistics

Grain Handled at Eastern Elevators.—The volume of grain handled at eastern elevators in the 1957-58 crop year represented only a slight decline from the preceding year. Total receipts of the five major grains amounted to 451,200,000 bu., 2 p.c. lower than in 1956-57. The decrease largely resulted from reduced receipts of flaxseed as well as smaller receipts of oats, barley and rye. Total shipments amounted to 456,400,000 bu., 3 p.c. greater than in 1956-57, and reflected a substantial increase in shipments of wheat.

24.—Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1954-58

NOTE.—Figures for the crop years ended 1922-53 are given in the corresponding table of previous Year Books beginning with the 1931 edition.

Grain Inspections.—The volume of Canadian wheat, oats, barley, rye, flaxseed, corn, buckwheat and mixed grain and a small quantity of United States grain inspected by the Board of Grain Commissioners for Canada in the crop year 1957-58 amounted to 602,500,000 bu. which was 2 p.c. above the 1956-57 total of 591,200,000 bu. Quantities of the various grains inspected at eastern and western points, as well as inspections of soybeans, beans, peas, sample grain, screenings, sunflower seed, rapeseed, mustard seed and safflower seed appear in Table 25.

Lake Shipments of Grain.—The 1958 navigation season opened on Apr. 18 and closed on Dec. 13. During that season, total vessel shipments of wheat, oats, barley, rye, flaxseed and buckwheat amounted to 322,200,000 bu., 16 p.c. above the 1957 total of 278,600,000 bu. The 1957 season of navigation opened on Apr. 10 and closed on Dec. 14.

Wheat Flour.—After reaching a peak of 56,033,000 cwt. in 1946-47, Canadian wheat flour production dropped to a postwar low of 39,708,000 cwt. in 1949-50. Production in each of the following three crop years was only slightly below the five-year (1945-46—1949-50) average of 47,012,000 cwt. Yearly declines brought production down to 37,623,000 cwt. in 1956-57. During 1957-58, however, this downward trend was reversed; production of wheat flour amounted to some 40,820,000 cwt. and utilization of milling capacity increased from 69.3 p.c. in 1956-57 to 74.7 p.c. in 1957-58.

Exports of wheat flour during recent years have followed approximately the same pattern as production, dropping from the 1946-47 peak of 33,117,000 cwt. to 14,582,000 cwt. in 1956-57, and increasing to 17,557,000 cwt. in 1957-58. The 1957-58 exports of wheat flour amounted to approximately 43.0 p.c. of production compared with 38.8 p.c. in the preceding year.

Subsection 2.—Livestock Marketings*

The volume of cattle handled through public stockyards and in packing plants in 1958 at 2,706,984 head showed little change from 1957 in total but quality was generally better with a higher proportion of steers and heifers grading choice and good. Movement of stock cattle and feeders from these markets back to farms was about the same as in 1957 but live exports, with a strong demand for feeders in the United States, rose sharply to 658,095 in 1958 from 375,693 in 1957. The marketings of calves were appreciably higher in 1958 but fewer were graded in the better slaughter classes, largely because of the heavy demand for stockers. The quality of sheep and lambs was about the same as in 1957 but total marketings at 18,000 were down 3 p.c. Hog marketings were 19.6 p.c. above 1957 at 6,466,510. This was the largest volume marketed through these channels since 1952 and the fourth largest on record. The quality of hogs marketed was generally about the same as in 1957 with 28.7 p.c. Grade A and 50.4 p.c. Grade B. Regionally, there was improvement of quality in the Maritime Provinces but a slight fall-off in Ontario and the Prairie Provinces.

* More detailed information is available from DBS annual report *Live Stock and Animal Products Statistics* (Catalogue No. 23-203), and the Department of Agriculture publication *Livestock Market Review*. Statistics of livestock and poultry are given at pp. 476-479 of this edition of the Year Book.

Section 3.—Warehousing and Cold Storage*

Warehousing ranks high among the means by which the utilities of 'place', 'time' and 'possession' are added to the products of industry. Its importance has been emphasized in modern times because of the introduction of cold storage methods in the conservation of perishable foods.

The presentation of warehousing statistics is difficult because it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship with merchandising. However, if the strict economic definition of warehousing is adopted, then this term should be restricted to those facilities that add the utility of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Because the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, they are not, in the strict economic sense, services that add the utility of 'time' to commodities already worked up into 'form'. As some clear line must be drawn and because separate statistics of the latter branch of storage are not available, it is considered practicable to interpret warehousing in this way.

The statistics of warehousing are gathered together under this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products, and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers, who supervise all movements into and from such places of storage.

* Information supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, and National Revenue and of the Dominion Bureau of Statistics.

Subsection 1.—Licensed Grain Storage

Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to 632,200,000 bu. at Dec. 1, 1957, an increase of 10,000,000 bu. over the level at Dec. 1, 1956. Some 8,303,000 bu. of this increase occurred in western country elevators. Licensed grain storage capacity in Canada had reached a peak of 603,000,000 bu. at Dec. 1, 1943 but, following the disposal of heavy wartime stocks, declined to 482,400,000 bu. at Dec. 1, 1947. Since that date, capacity has increased each year.

The 1957 grain yields were well below the average of recent years and, with the exception of rye, were sharply reduced from 1956 levels. However, with bumper crops being harvested in five of the six preceding years, the pressure on Canada's grain storage and handling facilities remained great. Farmers' marketings of western grain are governed to a considerable extent by space made available in country elevators as grain moves forward into domestic and export channels. As indicated in Table 30, there was only slight variation in the proportion of elevator space occupied at Nov. 27 and Apr. 2 in the 1957-58 crop year but by July 31 the proportion occupied had increased to 77.0 p.c. Information is given in the table for only three dates in the crop year, but weekly data on stocks of grain in various commercial positions may be obtained from the DBS bulletin *Grain Statistics Weekly* (Catalogue No. 22-004).

Subsection 2.—Cold Storage and Storage of Foods

Cold Storage Warehouses.—Under the Cold Storage Act (RSC 1952, c. 52), as amended (RSC 1952, c. 313), subsidies are granted by the Federal Government to encourage the construction and equipment of cold storage warehouses open to the public. The Act is administered by the Department of Agriculture.

There are five classifications of cold storage warehouses in Canada: (1) public warehouses that store foods and food products and where the entire space is open to the public; (2) semi-public, or those that store foods and where part of the space is retained for the products of the owner and the remainder is available to the public; (3) private, or those that store foods and food products and allot no space to the public, a classification that includes refrigerated space in connection with abattoirs, creameries, dairies, cheese factories and wholesale and retail distributing warehouses; (4) locker plant, where the total space is occupied by lockers for rental to the public and where food and food products may be cut, processed, chilled and frozen for storage in lockers; and (5) bait depots, where space is used solely or principally for the freezing and storing of bait for the use of fishermen.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general those owned and operated by firms trading in the goods stored in the warehouse are considered as private, although most of these places rent space to the public when it is not required for their own purposes.

The figures in Tables 31 and 32, compiled by the Department of Agriculture, give some idea of the cold storage warehouse capacity in Canada, but it must be explained that it is not possible to secure completely accurate information on this subject and that the figures are approximations only.

Cold Storage Holdings of Fish.—Stocks of frozen fish held in Canada during 1959 followed the usual seasonal trend. Normally, stocks decrease gradually during the early months of the year and reach a low point at the beginning of April or May when fishing has almost ceased; during subsequent months they increase and reach a peak at the beginning of October or November. In 1959, stocks were substantially higher on the average than in 1958.

The production of groundfish fillets and blocks on the Atlantic Coast was considerably above that of the previous year. During the spring, however, demand for these products had begun to weaken, resulting in a price decline at both the primary and secondary stages

of production. Stocks were built up steadily through the season and, at the end of the year, they were more than double those of the same date a year before. The increase was attributable exclusively to cod fillets and blocks. At the beginning of 1959, stocks of Pacific salmon were much higher than at the beginning of 1958. The market was strong during the year and prices were high. Production was appreciably lower than in 1958 and stocks at the end of the year were considerably lower than a year previously. The 1959 production of Pacific halibut was about the same as in 1958 and the demand was good. Stocks at the beginning of the year were slightly higher than in the previous year and they remained higher throughout the year.

34.—Storage Stocks of Fish, by Month and by Type, 1957-59

NOTE.—Stock totals are as at the beginning of each month; stocks of individual products are monthly averages.

Cold Storage of Dairy Products.—Cold storage facilities are a necessary adjunct in the manufacture of dairy products, most of which are perishable in varying degrees. All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. If the butter produced at small country plants is not printed for immediate sale, the butter solids are disposed of or are transported to larger creameries where better refrigeration is available or to private or public cold storages in the larger urban centres. Temperature control is important in the curing process for cheese as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for 17 days' produce during the period of maximum manufacture. The cheese is then transferred to central warehouses. As soon as milk is bottled it is placed in storage and held until delivery. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity.

Cold Storage of Apples and Potatoes.—Cold storage space for apples in Canada has increased rapidly in recent years as a result of the promotion of orderly marketing, the extension of the marketing season generally, and increased production in some areas. This trend has followed the curtailment in shipments to traditional markets in the United Kingdom and other European countries after World War II. There has been an increase recently in the construction of both privately and co-operatively owned storages, particularly in the Province of Quebec.

Potatoes are not ordinarily held in cold storage but recently there has been an increase in the construction of potato storage houses and warehouses in the commercial producing areas.

Subsection 3.—Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres, often on a waterfront so that full advantage may be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat, rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

Subsection 4.—General Warehousing

Public Warehouses.—The summary statistics of the warehousing industry in Canada presented in Table 36 cover the operations of the majority of firms offering warehousing and storage facilities to the public. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Small food lockers are not included except where they may be part of a general warehousing business.

Many public warehousing companies also operate a local moving and cartage service and others a motor-carrier business, involving long-distance moving. Commencing with 1958, firms earning greater revenue from long-distance moving than from the warehousing business are included in the *Motor Carrier—Freight* report. Prior to 1958 there was some duplication between the warehousing and motor freight carrier series where firms were involved in both industries. The 1958 statistics given in Table 36 include returns from 213 firms which appear to belong primarily to the warehousing industry.

Customs Warehouses.—Warehouses for the storage of in-bond goods are known as customs warehouses and are divided into three categories. (1) Those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods and others, known as Queen's warehouses, used for the storage of unclaimed, abandoned, seized or forfeited goods. (2) Bonded warehouses operated and owned by a person other than the Crown and used for the storage and safekeeping of imported goods after entry and conforming to one of the following: (a) an entire building or part of a building completely separated from the remainder of the building by adequate partitions or walls and devoted to the safekeeping of imported goods consigned or sold to the warehouse keeper or other persons; (b) a yard, shed or other suitable enclosure or area devoted to the safekeeping of imported goods too large or too heavy for lodging in a Class 2(a) warehouse; and (c) a farm, yard or other suitable enclosure devoted to the safekeeping of horses, sheep and cattle for feeding and pasturage. (3) Sufferance warehouses for the landing, storage, safekeeping, transfer, examination, delivery and forwarding of imported goods before entry and conforming to one of the following: (a) a warehouse operated or provided by railway, express, airline and shipping companies; (b) warehouses for in-bond goods arriving by commercial motor vehicle; and (c) all sufferance warehouses not described under (a) or (b).

Subsection 5.—Bonded Warehousing and Storage of Wines

Bonded Warehousing.—The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits

or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses and only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes that are not stamped and duty paid are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on but which are used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores.

Table 37 shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. In addition, the year-end inventories of beer in breweries amount to some 30,000,000 gal.

¹ Duty has been paid herein on the malt.

² Duty solely on gallonage basis since 1954.

Storage of Wines.—The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying wines.

Section 4.—Co-operative Organizations

Marketing and purchasing co-operatives continue to play an important role in the marketing of agricultural products and in the purchasing of supplies for farm people in Canada. During 1957-58, such co-operatives reported a membership of 1,332,546, a small decrease from the previous year. There is some duplication included in this number since many members belong to more than one co-operative.

The number of co-operative associations declined slightly in 1957-58 whereas the number of places of business increased substantially. The total business for these associations amounted to \$1,208,455,000, an increase of 8 p.c. over the previous year. Co-operatives accounted for 33 p.c. of the total value of farm products marketed in Canada in 1957-58, an increase of 3 p.c. over 1956-57. Sales of farm products by the marketing and purchasing group were reported at \$859,000,000 in 1958, an increase of \$42,000,000 over 1957. Grains and seeds, valued at \$368,833,000, made up 43 p.c. of the total value of farm products marketed, and sales of livestock at \$248,781,000 and of dairy products at \$185,989,000 accounted for the bulk of the remaining co-operative marketing business. Co-operative sales of fruits and vegetables and of eggs and poultry were also substantial.

Among the provinces, Saskatchewan recorded the greatest value of produce co-operatively marketed, amounting to \$263,698,000; grains made up a large proportion of this amount. Other provinces sharing substantially in the co-operative sales of farm products were: Ontario with \$161,000,000, Alberta \$149,000,000, Quebec \$93,000,000, Manitoba \$78,000,000, and British Columbia \$67,000,000.

Co-operative sales of merchandise and supplies to members amounted to \$296,000,000 in 1958, an increase of \$12,000,000 over the previous year; feed and fertilizer represented 34 p.c. of the total. In this type of business, Quebec co-operatives led the provinces with sales of \$68,000,000, followed closely by Saskatchewan and Ontario.

Members' equity in their marketing and purchasing co-operatives increased by \$3,000,000 in 1958 and an increase of \$23,000,000 was recorded in liabilities to the public.

The local co-operatives are served by ten wholesale associations which are owned and controlled by their respective member co-operatives. These wholesale associations had assets amounting to \$66,000,000 in 1958, varying from \$28,000,000 for the largest to \$105,000 for the smallest. Total sales of supplies and farm products by these wholesalers amounted to \$250,000,000 in 1958, a gain of \$31,000,000 over the previous year.

There are, in addition, numerous co-operative associations operating in various service fields, 800 of which reported their activities in 1958. These reporting associations had a total membership of 250,498, and assets amounting to \$89,570,000. Their services included provision of housing, rural electrification, medical insurance, transportation, recreation facilities, custom grinding, seed cleaning, operation of farm machinery, leasing of grazing land, restaurant operation, and other services.

The data for marketing and purchasing co-operatives do not include fishermen's co-operatives. Though fishermen have formed co-operative organizations in most of the areas having a substantial fishing industry, the volume of their collective business is much smaller than that of agricultural co-operatives. In 1958, fishermen's co-operatives reported sales of fish amounting to \$19,537,000, which constituted about 9 p.c. of all fish marketed in Canada. They sold \$2,652,000 worth of supplies to their members.

¹ Duplication exists in this column as some associations market produce as well as handle supplies, some associations market more than one product and some handle many of the supplies listed.

² Included with machinery and equipment.

Section 5.—Interprovincial Freight Movements*

Statistics relating to interprovincial freight movements are difficult to collect since there are no controls over or barriers to such trade. Provincial freight traffic statistics are available for loadings and unloadings of goods carried by rail, water, pipeline and motor transport.

Details of railway freight movement are confined to tons loaded and unloaded by province and contain a certain amount of import and export of goods shipped by water. The figures shown in Table 43, however, do not give a precise measure of total interprovincial freight movement by rail; they indicate only the net interprovincial movement of railway freight, which is but one aspect of that trade. For water-borne traffic, Table 44 shows tonnages of all cargoes unloaded at Canadian ports in both interprovincial and intra-provincial trade, by province of origin. Interprovincial data for oil carried by pipeline is given in Tables 45 to 47; Table 45 shows the quantity of oil entering Canadian pipelines by province and by type of line, and Table 46 shows the quantity of oil delivered by Canadian pipelines by province and by type of line. Oil movement by pipeline between Canada and the United States is also included in Tables 45 and 46; imports for each province are shown in Table 45 and exports for each province in Table 46. Canadian crude oil re-imported by the Interprovincial Pipe Line Company through its pipeline in southern Ontario is shown separately in Table 47.

* Revised in the Transportation and Public Utilities Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

Section 1.—Controls Affecting the Handling and Marketing of Grain

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners which since 1912 has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935. The establishment and functions of these two Boards are given in the following specially prepared articles.

THE BOARD OF GRAIN COMMISSIONERS*

The Board of Grain Commissioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RSC 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body of three—a Chief Commissioner and two Commissioners—reporting to the Minister of Trade and Commerce.

The Canada Grain Act has been called the Magna Charta of the Canadian grain trade or, more particularly, of the Canadian farmer, and the Board's chief duties are to ensure that the rights conferred on the different parties by the provisions of the Act are properly protected. Transportation of grain is restricted except from or to licensed elevators, and restriction is placed on the use of established grade names. The Act does not provide for any control or supervision of grain exchanges and the Board of Grain Commissioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadian Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonton and Calgary, Alta., and Prince Rupert, B.C., and leases the Canadian Government elevator at Port Arthur, Ont., to a privately owned grain company.

The Board provides official inspection, grading and weighing of grain, and registration of warehouse receipts in accordance with the various relative provisions of the Act. Fees are charged for these services in accordance with a schedule contained in a regulation of the Board. In addition to the above, the Board maintains Executive Offices and Statistics and Research Branches. Total personnel is approximately 900. The Executive Offices and other principal offices are situated in Winnipeg, Man., but branch offices are maintained at numerous points from Montreal in the east to Victoria in the west.

All operators of elevators in Western Canada and of elevators in Eastern Canada that handle western-grown grain for export, as well as all parties operating as grain commission merchants, track buyers of grain, or as grain dealers, are required to be licensed by the Board annually and to file security by bond or otherwise as a guarantee for the

* Prepared by W. J. MacLeod, Secretary of the Board of Grain Commissioners for Canada, Winnipeg, Man.

performance of all the obligations imposed upon them either by the provisions of the Canada Grain Act or by the regulations of the Board. The Canada Grain Act lays down the general broad principles that are to govern the handling of grain but usually the details are left to the Board to be dealt with by regulation or order.

To protect the rights of the different parties, the Board has jurisdiction to inquire into and is empowered to give such direction as the right and justice of the case requires regarding any matter relating to the grading or weighing of grain; deductions made from grain for dockage; shortages on delivery of grain into or out of elevators; unfair or discriminatory operation of any elevator; the refusal or neglect of any person to comply with any provision of the Canada Grain Act; and any other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces the Board maintains four Assistant Commissioners—one in Alberta, two in Saskatchewan and one in Manitoba. The Assistant Commissioners investigate complaints of producers and inspect periodically the country elevators in their respective provinces; all elevators with their equipment and stocks of grain are subject at any time to inspection by officials of the Board.

The Board sets up, annually, Committees on Grain Standards and also appoints Grain Appeal Tribunals to give final decisions in cases where appeals are made against the grading of grain by the Board's inspection officials. To assist in maintaining the uniform quality of the top grades of Red Spring Wheat handled through terminal elevators, the Canada Grain Act provides that wheat of these grades shall be stored with grain of like grade only.

In addition to its duties under the Canada Grain Act, certain other duties are performed by the Board. Under the provisions of the inland Water Freight Rates Act (RSC 1952, c. 153), the Board maintains records of rates for the carriage of grain from Fort William or Port Arthur, Ont., by lake or river navigation and is empowered to prescribe maximum rates for such carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213 as amended), the Board collects from licensees under the Canada Grain Act, 1 p.c. of the purchase price of wheat, oats, barley, rye, flax and rapeseed purchased by such licensees.

THE CANADIAN WHEAT BOARD AND ITS ROLE IN GRAIN MARKETING*

The Canadian Wheat Board was established under the Canadian Wheat Board Act of 1935 (RSC 1952, c. 44 and amendments). This Act defines the object of the Board as the "marketing in an orderly manner, in interprovincial and export trade, of grain grown in Canada". The Board was at first a voluntary Board, that is, farmers had the option of marketing their wheat through the Board or through the private grain trade. In 1943, under the War Measures Act, the Wheat Board was made a compulsory Board, and all wheat going into commercial channels was required to be marketed through it. At the end of the War, the Transitional Powers Act continued the Board as the sole marketing agency for wheat until 1947 when the Canadian Wheat Board Act was amended. The major wartime powers of the Board were continued in the 1947 Act. It is under provisions of this 1947 legislation, with some later amendments, that the Board is operating today.

The powers of the Canadian Wheat Board Act are founded on the jurisdiction of the Parliament of Canada over export and interprovincial trade and commerce, and also upon the declaration in the Canada Grain Act that country elevators are declared to be works for the general advantage of Canada.

Procedures Used.—The Canadian Wheat Board accomplishes its objective of orderly marketing of grain through regulation and agreement, not through the ownership of grain marketing facilities. The Wheat Board itself owns no grain handling facilities. Rather,

* Prepared by C. B. Davidson, Executive Assistant of the Canadian Wheat Board, Winnipeg, Man.

by entering into agreements with the owners of these facilities, it attempts to bring about an orderly flow of grain through each of the steps involved in merchandising the grain from the producer to the domestic and overseas buyer.

The actual selling of wheat is accomplished either by the Wheat Board selling the grain directly to a buyer of another government or, as is much more common, by members of the regular grain trade as agents of the Board. The Wheat Board annually enters into an agreement with shippers and exporters and they buy and sell grain under the terms of this agreement.

To provide for an orderly flow of grain into forward positions during times when the commercial storage facilities are inadequate to handle all the grain produced, it is necessary to regulate the flow of grain from the producer to these forward positions. The first step in achieving this orderly flow is accomplished by the use of producer's delivery permits issued annually by the Canadian Wheat Board. Every delivery of grain made to country elevators by a producer is entered in his permit book. By regulating the amount of grain delivered by the producer to the country elevator by the use of a quota system, and by apportioning shipping orders to country elevators according to the needs created by sales commitments, the Wheat Board regulates the amount of grain coming into the marketing channel.

The next step in the marketing channel is the handling of the grain by the country elevator. The maximum charges for the handling and storing of the grain are set by the Board of Grain Commissioners, but the actual charges are subject to negotiation between the elevator companies and the Wheat Board.

The third step in the marketing process—transporting the grain from the country elevators to the large terminal elevators in Eastern Canada, Churchill or the West Coast—is carried out by the railways. The wheat Board determines the kinds and grades of grain that are required at the different terminal destinations to meet its sales commitments and informs the elevator companies and the railways of these needs. The maximum tariffs for transporting export grain to Vancouver and the Lakehead are set by an agreement between the railways and the Federal Government and approved by federal legislation. This agreement is commonly referred to as the Crow's Nest agreement.

The fourth major step—storing and handling of the grain at terminal elevators—is done in privately or co-operatively owned elevators. Maximum charges are established for this service by the Board of Grain Commissioners.

In the case of oats and barley, the Board's operations are less extensive than those relating to wheat. These two grains are sold in store positions at the terminal elevators at Fort William—Port Arthur and Vancouver. Oats and barley are marketed either on a straight cash basis at prices quoted daily by the Board or on the basis of exchange of futures concluded through the facilities of the Winnipeg Grain Exchange. The Board controls the movement of coarse grains to the Lakehead. The private trade is responsible for the movement of oats and barley from Fort William—Port Arthur or Vancouver positions.

With respect to rye and flax, the Board's operations are very limited. The only way the Board enters the picture for the marketing of these two grains is through the quota system and the movement of such grains to the terminals. The Board attempts to assure an adequate supply of rye and flax in sales position by authorizing shipments as demand warrants.

Price Determination.—The general level of prices received by the Canadian Wheat Board for Canadian wheat is determined by competitive conditions in world markets. While Canadian wheat generally commands a premium over other wheats, the prices established must bear a close relationship to the prices of wheat being offered for export

by other wheat-exporting nations around the world, having regard to quality. The test of Wheat Board pricing is the continuity and volume of Canadian export wheat sales. Any significant changes in the pattern of world trade in wheat indicate the need for reappraisal of pricing policy.

Within a narrow range of prices, the Board can and in fact does vary prices. For example, the Wheat Board may raise or lower the offering price of wheat from a given port, if it is desirable, from the standpoint of meeting the objective of the orderly marketing of wheat to influence the volume of its sales from that port as compared to other Canadian ports. The Wheat Board also varies the prices between grades of wheat to encourage sales of one grade in relationship to sales of another. But the Canadian Wheat Board alone cannot determine the general level of world wheat prices.

Producer's Payments.—The producer receives payment for his wheat, oats and barley in two or three stages. An initial payment price is established early in the crop year by Order in Council. The initial payment price less the cost of handling grain at the local elevator and the transportation costs to the Lakehead or Vancouver is the initial price received by the producer. This price is a guaranteed floor price in that if the Wheat Board, in selling the grain, does not realize this price and the necessary marketing costs, the deficit is borne by the Federal Treasury. However, with very few exceptions, the Wheat Board has operated without financial aid from the Federal Treasury.

After the end of the crop year, but prior to the final payment being made, if the Wheat Board can confidently foresee a surplus accumulating and if authorized by Order in Council, an interim payment is made to producers. This interim payment is the same amount per bushel to all producers of the same grade of grain. When the Board has sold all the grain or otherwise disposed of it in accordance with the Canadian Wheat Board Act, the Board, if authorized by Order in Council, makes a final payment to producers. The payment procedure can then be summarized as follows: (1) the producer receives an initial "floor" price for his grain; (2) the producer receives an interim payment if marketing conditions warrant it; (3) the producer receives a final payment representing his share of any surplus accruing as a result of the sale of the grain; and (4) all producers receive the same price for the same grades of grain, after allowances for transportation costs.

Comparison with Fixed Government Pricing.—The Canadian system of marketing grain differs from systems operative in some countries in the world where the government guarantees a price higher than the export price to the farmer and the national treasury makes up the difference between the export price and the guaranteed price. Western Canadian producers receive the price for their grain that the Wheat Board receives, less its operating costs including carrying charge. The only subsidy received by the farmer in the wheat marketing system is the part payment of storage costs for wheat made by the Government of Canada. Under provisions of the Temporary Wheat Reserves Act, the Minister of Finance, out of the Consolidated Revenue Fund, pays to the Wheat Board the storage costs on wheat in storage at the end of the crop year in excess of 178,000,000 bu.

Changing Functions of the Canadian Wheat Board.—The primary function of the Wheat Board today is still the orderly marketing of western Canadian grain, but because of its unique place in the marketing system it is called on increasingly to perform additional functions. For example, in the administration of the Prairie Grain Advance Payments Act (see p. 445), a key factor is the permit book issued by the Wheat Board. The Government has therefore called on the Wheat Board in the administration of this Act. The Wheat Board is also frequently called on to act as adviser to the Government of Canada in meetings of the International Wheat Council and other meetings dealing with current international developments affecting wheat.

Section 2.—Controls Over Pricing and Marketing of Farm Products Other Than Grain*

With the growing complexity of agricultural marketing caused by the fact that the producer is more and more becoming a specialist and produces more for marketing off the farm than for his own needs, a substantial and continuing change in the approach to marketing problems is evident.

Early developments in the marketing of agricultural products included the establishment of grades and grading which are now almost universally accepted as necessary in the flow of produce to market. The history of marketing legislation in Canada relating to grades and standards of quality might be summarized as follows: (1) for the protection of the consumer in the matter of weights, measures and prices as represented in the early colonial legislation; (2) the encouragement of the export trade by the imposition of weights and simple quality standards in colonial and pre-Confederation legislation; (3) the extension of grading for export and the application of grading to sales by farmers which features the development since Confederation; and (4) the use of grading and retail selling which is a development, in the main, of the present generation.

With respect to organized marketing, early legislation was related mainly to co-operative marketing, although the first wheat board in Canada was established during World War I. British Columbia entered the field of greater regulation of marketing practices in 1927 and during the 1930's most of the provinces passed milk control legislation and regulations of one kind or another. Problems which the producers have been striving to make less difficult as they have developed co-operatives and marketing controls include: (1) short-run or seasonal surpluses which weigh heavily on the market at time of delivery; (2) distribution of the product to alternative market outlets so that returns may be as high as possible; (3) provision of better market knowledge about supplies available for market; and (4) attempt to place themselves, as many individual producers, in a reasonable or better bargaining position with respect to a limited number of buyers to whom the product is sold.

With the exception of tobacco, little or no attempt at production control has been introduced in Canada, although in some countries this also forms part of a broad program of market control. The methods of control might be summarized as follows, although some of the methods mentioned may be combined in some operations: (1) producers may organize co-operative marketing agencies; (2) producers may establish compulsory marketing boards to bargain with groups buying the product for processing or further sale; (3) producers may establish compulsory marketing boards to direct the flow of product and bargain on price; (4) producers may request the Federal Government to establish a government marketing board; and/or (5) producers may request intervention in the pricing system through an offer by the Government to either assist in financing the orderly marketing of the product or in the support of the price of the product in the market-place.

The Government of Canada and provincial governments have, through legislation and in other ways, given marketing aids such as those related to research, education, information, inspection, grading and many other service measures of this type, designed to assist in making adjustments in marketing within agriculture and between agriculture and the remainder of the economy.

There exists in Canada today considerable legislation on the federal, provincial and municipal levels which gives government agencies and farmers the power to take measures for controlling the marketing of farm products. Legislation relating to grain marketing is dealt with in the previous Section and an attempt is made here to cover in a general way some of the other types of legislation, with particular reference to the Agricultural Products Co-operative Marketing Act, the Agricultural Products Marketing Act and the Agricultural Stabilization Act.

* Prepared in the Economics Division of the Administration Branch, Department of Agriculture, Ottawa.

General Marketing Controls.—At the municipal level, many cities and towns have controls with respect to the sale of foods in certain areas or with respect to health standards. For example, most municipalities have some form of health regulation concerning milk being sold within their boundaries. This is often extended to licensing for the purpose of assuring sanitary standards on the farms where the milk originates. Similarly, zoning by-laws not only may control the areas where commercial merchandising generally can take place but may state that public markets where fruits and vegetables and other goods are sold may operate only under fairly strict supervision of the municipality.

With respect to provincial government controls, the first government-appointed agency with power to maintain price structures for fluid milk was set up in Manitoba in the early 1930's, although most of the provinces enacted milk control legislation before 1940. Most provinces finance these milk-control agencies out of public funds, others finance through the collection of licence fees and assessments from those engaged in the fluid milk industry, and some combine the two methods. Most milk-control agencies have authority to carry out some system of licensing which provides for the revocation of such licences if those engaged in the fluid milk business do not conform with the orders of the milk control board.

Price control exercised by these boards takes various forms ranging from the establishment of a minimum price per hundredweight to be paid to producers to complete control of minimum or maximum prices for milk to consumers. In recent years there has been a tendency in some provinces to leave more freedom in pricing to normal competition except for the establishment of a minimum price to producers; in a number of provinces this minimum price is fixed by formula.

The powers given to or requirements made by milk control boards include: (1) authority to inquire into all matters pertaining to the fluid milk industry, to define market areas, to arbitrate disputes, to examine the books and records of those engaged in the industry, to issue and revoke licences, and to establish a price for milk; and (2) authority to require a bond from distributors, periodic reports from distributors, payments to be made to producers by a certain date each month, distributors to give statements to suppliers, distributors to give notice before stopping to accept milk from any producer, producers to give notice before stopping to give milk to any distributor, and the prohibition of distributors requiring capital investment from producers.

Thus fluid milk controls are not only widespread but numerous and are generally considered to be administered in the public interest as well as in the interest of those who have regular opportunities to appear before the boards in connection with requests for price changes.

Federally, the Food and Drug Division of the Department of National Health and Welfare has wide control over the content of foods sold, the Department of Agriculture exercises some control over size and type of packages and containers used in food preparation, and the Weights and Measures Division of the Department of Trade and Commerce also exercises controls in its sphere.

The Agricultural Products Co-operative Marketing Act.—In the late 1930's, the Federal Government decided to assist orderly marketing by encouraging the establishment of pools which would return to the producer the maximum sales return for his product less a maximum margin for handling expenses agreed upon in advance. Thus the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products except wheat, has been used to a greater or lesser degree from time to time during the intervening years.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products by guaranteeing initial payments and thus assist in the orderly marketing of the product. The Government will undertake to guarantee a certain minimum initial

payment to the producer at the time of delivery of the product including a margin for handling, sales returns to be made to the producer on a co-operative plan. The guaranteed initial payment may be up to a maximum of 80 p.c. of the average price for the previous three years, the exact percentage to be recommended by the Minister of Agriculture who enters into an agreement with the selling agency for the product. The payment to the producer is to be made through the sales agency on a graded basis at the time of delivery of the product.

According to the Act, the co-operative plan means an agreement or an arrangement for the marketing of agricultural products providing for equal returns to primary producers for agricultural products of like grade and quality; for the return to primary producers of the proceeds of the sale of all agricultural products delivered thereunder produced during the year or pooling period, after deduction of processing, carrying and selling costs; and for an initial payment to primary producers. When a fruit grower or rancher delivers products for sale on such a basis, he surrenders title to the product and acquires in exchange a fractional interest in a pool and will receive exactly the same return as other participants for the same grade and quality. Under the Act, agreements may be made by the Minister with co-operative associations, processors of agricultural products or selling agencies authorized to act for one or more co-operative associations, one or more processors or one or more associations and processors. It has been usual to make agreements with a selling agency of the latter type if one marketer does not handle a substantial portion of the product in the area.

Agreements under this Act have been made with respect to the marketing of maple products, honey, onions, potatoes, cheddar cheese, apples, peaches, apricots, cherries, oats, barley, flax, rye, corn, fox and mink pelts, and the following seeds: alfalfa, crested wheat grass, brome grass, slender wheat grass, western rye grass, timothy, red clover, alsike clover, sweet clover, creeping red fescue, meadow fescue, and peas. Thus far the Government of Canada has suffered losses under this Act only with respect to fox pelts and potatoes. This experience indicates that any service to agriculture rendered by this Act has been at relatively small expense to the taxpayers of Canada except for small administrative expenses, most of which have been taken care of as part of the day-to-day administration of the Department of Agriculture.

In administering the Act, the Minister has required that, as far as possible, products should be marketed annually or in a shorter period of time so that pools might be closed out promptly. Where stocks have been carried over for more than one year, definite arrangements are usually made for the marketing of such stocks before a new agreement is completed. The question of carry-over and length of the marketing pool may conceivably present some administrative difficulty during periods of declining price levels. There is some possibility of producer groups attempting to use this Act for the purpose of price support. The Government has made it quite clear that the Act is not intended as a means of supporting prices, but as a basis for assistance in providing credit and financing the orderly marketing of agricultural products on a voluntary pool basis. Another problem arises when arriving at an initial payment basis since the guarantee is usually open to all who wish to deliver and cannot quickly be closed off. Some consideration may have to be given to time and quantity limitations if such difficulties develop.

The Agricultural Products Marketing Act.—The drop in farm prices and income after the end of World War I, the modest recovery in the 1920's, and the start of the depression of the 1930's caused farmers to look to marketing adjustments and reorganization to help resist a further decline in their farm income. British Columbia introduced the first producer-operated market control measures in Canada in 1927 and 1929; authority was given by the Produce Marketing Act and the Dairy Products Sales Adjustment Act, but both Acts were later declared *ultra vires* of provincial authority. The form of organization was originally developed in Queensland, Australia, in connection

with the Queensland Wheat Pool Act of 1920 and the Queensland Primary Products Act of 1922. G. F. Perkin, formerly Chairman of the Ontario Farm Products Marketing Board, stated as follows:—

“The essential feature of the Australian Acts and subsequently their British and Canadian counterparts is that where the majority of the producers of a commodity desire to sell their product collectively the minority may be compelled by law to join in a common sales policy.”

The Natural Products Marketing Act passed by the Federal Government in 1934 was patterned to a considerable extent on the British Marketing Acts of 1931 and 1933 but it too was declared *ultra vires* of federal authority and the judgment of the Privy Council brought down in 1937 indicates that the form in which this legislation was enacted attempted to regulate within the province as well as in matters of interprovincial concern. An extract from the judgment is as follows:—

“It was said that as the Provinces and the Dominion between them possess a totality of complete legislative authority, it must be possible to combine Dominion and provincial legislation so that each within its own sphere could in co-operation with the other achieve the complete power of regulation which is desired. Their Lordships appreciate the importance of the desired aim. Unless and until a change is made in the respective legislative functions of Dominion and Province, it may well be that satisfactory results for both can only be obtained by co-operation. But the legislation will have to be carefully framed, and will not be achieved by either party leaving its own sphere and encroaching upon that of the other. In the present case their Lordships are unable to support the Dominion legislation as it stands. They will, therefore, humbly advise His Majesty that this appeal should be dismissed.”

About this time and following this 1937 judgment, further provincial legislation was enacted and attempted to deal with matters strictly within the provincial authority. Some test cases indicate that these newly developed provincial Acts are mainly *intra vires*. Following the withdrawal of wartime powers of the Federal Government, the Agricultural Products Marketing Act of 1949 was enacted to provide delegation for like powers to those established for marketing boards within a province for the purposes of interprovincial and export trade. A Supreme Court judgment in January 1952 cleared the validity of the Agricultural Products Marketing Act but left some doubt with respect to how licences, levies or other charges can be made by marketing boards beyond the extent of immediate administrative expenses without some approval by the Federal Government in its constitutional field of indirect taxation.

In April 1957, following a further Supreme Court judgment in respect to Ontario legislation, an amendment to the federal Agricultural Products Marketing Act vested in the Governor in Council the right to authorize local boards to “fix, impose and collect levies or charges from persons engaged in the production or marketing of the whole or any part of any agricultural product and for such purpose to classify such persons into groups and fix the levies or charges payable by the members of the different groups in different amounts, to use such levies or charges for the purposes of such board or agency, including the creation of reserves, and the payment of expenses and losses resulting from the sale or disposal of any such agricultural product, and the equalization or adjustment among producers of any agricultural product of moneys realized from the sale thereof during such period or periods of time as the board or agency may determine”.

There are at present close to 75 such marketing boards organized in Canada, about one-half of which are in the Province of Quebec and about one-quarter in Ontario; all other provinces with the exception of Newfoundland have one or more boards.

The annual statistical report prepared by the Economics Division of the Department of Agriculture in relation to these boards indicates that about one-eighth of the farm cash income in Canada in 1958 was received from sales made under the control of provincial marketing board plans, including the following commodities: seed corn, potatoes, other vegetables, sugar beets, tobacco, hogs, certain dairy products, fruits, wool, honey, white beans, maple products and soybeans.

On June 1, 1960, twenty-five of these provincial boards had received an extension of powers for purposes of interprovincial and export trade from the Federal Government. Three had received authority to collect levies in excess of administrative expenses.

The Agricultural Products Marketing Act does not give the local or provincial marketing board any greater control over agencies outside the province than is possible through the control of the commodity by the board and whatever contractual arrangements it may make with such agencies outside the province. It does make it possible, however, for marketing boards to provide groups within a province complete marketing control over any commodity produced in that province, or any area of that province which may be defined.

In administering the Agricultural Products Marketing Act, the Governor in Council has generally extended powers as requested, providing that those presenting the application can show that there is some benefit to them in having these powers in interprovincial and export trade and that the powers to be extended are within the authority of the province to grant in the particular case under consideration.

The Agricultural Stabilization Act.—The Agricultural Stabilization Act was passed in 1958 as the successor to the Agricultural Prices Support Act. Payments related to aids to marketing were common prior to 1940. These included guaranteed advances, bonuses, premiums for quality, assistance in building cold storage and other facilities for warehousing products as well as numerous types of transportation and price assistance, mostly on an *ad hoc* basis.

In 1944, partly if not wholly as a result of the acceptance by farmers of price ceilings during the war years, Parliament provided a formal basis for agricultural price support for all products except wheat; wheat was provided for under special legislation. The Agricultural Prices Support Act and the Agricultural Stabilization Act which succeeded it in 1958 provided for a three-man administrative board which in recent years has had as its members permanent civil servants.

Under the Agricultural Prices Support Act, provision was made on a permissive basis for a General Advisory Committee. This Committee at that time was chaired by the President of the Canadian Federation of Agriculture and included all provincial Deputy Ministers of Agriculture or their representatives, as well as producer representatives from the main agricultural regions and commodity groups. Under the new Agricultural Stabilization Act the Minister is required to name an Advisory Committee of up to ten members who shall be farmers or representatives of farm organizations. In addition, the Board under each Act, as seemed appropriate from time to time, called in special advisory committees either from the trade or from producer groups to assist in the Board's operations in a particular field.

The Agricultural Stabilization Board has at its disposal a revolving fund of \$250,000,000 which is \$50,000,000 higher than that made available to its predecessor. This fund is maintained at that amount by annual appropriations by Parliament to cover any loss that may take place during the year and, if there should be any surplus to the Board's account, it is to be turned over each year to the general Consolidated Revenue Fund.

During the period in which the Agricultural Prices Support Act was operative, the Board used a total working capital of approximately \$600,000,000 in supporting 11 different commodities at various times during the 12-year period 1946-58. Of this amount it recovered through resale of commodities purchased approximately \$500,000,000, leaving a total net cost to the Canadian taxpayer of \$100,000,000 for its operations over the period.

In the first year of operation of the Agricultural Stabilization Board, 21 commodities were under support with a price prescribed in terms of a percentage of a 10-year average market price. In the year ended Mar. 31, 1960, 18 commodities were under support. Most of the commodities were at the 80-p.c. or higher level of the 10-year average. The net cost of support in the fiscal year 1957-58 was approximately \$15,000,000 and in the fiscal year 1958-59, \$60,000,000.

No formula for establishing price support levels was set out nor was the Board required to support any particular agricultural commodity under the Agricultural Prices Support Act. Under the Agricultural Stabilization Act, all price support levels have to be related to a price formula based on the most recent 10-year average of market prices for the product concerned. In addition, the Board, unless the Government sets a higher support level, must support the prices of nine named key commodities at not less than 80 p.c. of the 10-year average market price. The named commodities are butter, cheese, eggs, cattle, hogs, sheep, wheat, oats and barley (for the latter three, the support applies to grains produced outside the prairie areas designated under the Canadian Wheat Board Act). Other commodities can be supported at such percentage of the 10-year average market price as may be approved by the Government from time to time. In other words, other commodities are in the same position as all commodities were under the Agricultural Prices Support Act except that under the new Act the support level has to be prescribed as a percentage of the 10-year average market price.

The Agricultural Stabilization Act also requires that the prices established for the nine named or key commodities have to be announced so that they can apply for 12 months from the effective date. The general intent of the Act is that a similar procedure should apply to all commodities, but legally there is leeway for shorter or longer periods of application for the announcement of support prices of other commodities than for the commodities that the Board is required to support continuously.

The Agricultural Stabilization Board may support the price of products in any one or more of three ways: (1) an offer to purchase by the Board; (2) underwriting the market through producer guarantees, commonly called the "deficiency payment" method; or (3) making such payment for the benefit of producers as may be authorized for the purpose of stabilizing the price of an agricultural commodity. The third method is new under the Agricultural Stabilization Act. All methods have been used during the first years of operation of the Act, although recently there has been some tendency to use the so-called "deficiency payment" method to a greater degree.

The Board has no statutory limits placed on it in the Act in so far as disposal of product is concerned. Unless the Government makes a regulation or the Minister of Agriculture gives a direction, the Board legally may give the required product away, sell it, or otherwise dispose of it.

Regardless of future developments, the course likely to be followed by the Federal Government is to develop broad national policies in an effort to maintain an expanding demand for agricultural products in both domestic and export markets and to encourage the greatest degree of self-help by those in the industry concerned so that production and marketing efficiency may be at a maximum level, with support and control measures occupying a significant but not necessarily major role in assistance to agriculture.

Section 3.—Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade, which serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

The first federal legislation in this field, enacted in 1889, is still effective in amended form as Sect. 411 of the Criminal Code and is the mainstay of Canadian anti-combines legislation. Generally speaking, this Section forbids suppliers (manufacturers, wholesalers, retailers) to arrange among themselves to eliminate competition over a substantial part of any market by limiting production, restricting distribution or fixing prices.

* Revised by T. D. MacDonald, Q.C., Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa. Since the preparation of this information, the Combines Investigation Act and the Criminal Code have again been amended by Act of Parliament, passed on Aug. 1, 1980.

Sect. 411 of the Criminal Code and the Combines Investigation Act (RSC 1952, c. 314) are complementary pieces of legislation. The latter was enacted in 1923 and amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952. It repeats in Sects. 2 and 32 some of the substance of Sect. 411 but, while the latter relates chiefly to arrangements among separate firms, the former embraces any "merger, trust or monopoly" relating to a commodity, which has operated or is likely to operate to the detriment or against the interests of the public.

The Combines Investigation Act, in Sect. 34, also forbids a supplier of goods from prescribing the prices at which they are to be resold by wholesalers and retailers, i.e., the practice of "resale price maintenance". The supplier may, however, suggest resale prices as long as he does nothing to induce or require the trade to adhere to them.

Sect. 412 of the Criminal Code deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another, by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; and it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the purpose or effect of his actions is to lessen competition substantially or to eliminate a competitor.

These provisions, Sects. 411 and 412 of the Criminal Code and Sects. 2, 32 and 34 of the Combines Investigation Act, contain the substantive law relating to restrictive trade practices. The other provisions of the Combines Investigation Act relate to investigation and enforcement.

The Act provides for a Director who is responsible for investigating combines and other restrictive practices, and a Commission (the Restrictive Trade Practices Commission) which is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement; and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Minister, ordinarily required to be published within thirty days.

The Act also provides for general inquiries into restraints of trade which, while not forbidden or punishable, may affect the public interest. It further provides that the courts, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention. The constitutionality of the Section providing for restraining orders, which was enacted in 1952, has been upheld by the Supreme Court of Canada.

In the years 1954-59, the following reports of inquiries under the legislation have been published:—

- (1) Distribution and Sale of Gasoline at Retail in the Vancouver Area.
- (2) Resale Price Maintenance in the Sale of China and Earthenware.
- (3) Resale Price Maintenance in the Distribution and Sale of Television Sets in the Toronto District.
- (4) Manufacture, Distribution and Sale of Wire Fencing in Canada.
- (5) Distribution and Sale of Coal in the Timmins-Schumacher Area of the Province of Ontario.
- (6) Loss Leader Selling.
- (7) Manufacture, Distribution and Sale of Beer in Canada.
- (8) Manufacture, Distribution and Sale of Asphalt and Tar Roofings and Related Products in Canada.

- (9) Resale Price Maintenance in the Distribution and Sale of Certain Household Appliances.
- (10) Manufacture, Distribution and Sale of Transmission and Conveyor Equipment and Related Products.
- (11) Retail Distribution and Sale of Coal in Winnipeg.
- (12) Manufacture, Distribution and Sale of Quilted Goods, Quilting Materials and Related Products.
- (13) Manufacture, Distribution and Sale of Boxboard Grades of Paperboard.
- (14) Production, Purchase and Sale of Flue-Cured Tobacco in Ontario.
- (15) The Sugar Industry in Western Canada and a Proposed Merger of Sugar Companies.
- (16) Manufacture, Distribution and Sale of Metal Culverts and Related Products.
- (17) Purchase of Pulpwood in Certain Districts in Eastern Canada.
- (18) Manufacture, Distribution and Sale of Yeast.
- (19) Production, Distribution and Sale of Zinc Oxide.
- (20) Wholesale Trade in Cigarettes and Confectionery in the Edmonton District.
- (21) Study of Certain Discriminatory Pricing Practices in the Grocery Trade.
- (22) Manufacture, Distribution and Sale of Ammunition in Canada.
- (23) Distribution and Sale of Electrical Construction Materials and Equipment in Ontario.
- (24) Sale and Distribution of Surgical Rubber Gloves and Certain Other Surgical Supplies.

These reports are obtainable from the Queen's Printer or from the office of the Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

Section 4.—Trade Standards*

The Standards Division of the Department of Trade and Commerce consolidates under one Director the administration of the Electricity Inspection Act, the Gas Inspection Act, the Precious Metals Marking Act, the Weights and Measures Act, and the National Trade Mark and True Labelling Act.

Commodity Standards.—On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (RSC 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (RSC 1952, c. 215) commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Division is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale, and in checking the marks applied.

Weights and Measures.—The Weights and Measures Act (RSC 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada. The Act requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed towards the elimination of sales by short weight or short measure. The number of inspections made in the calendar year 1958 was 474,583 compared with 469,119 in 1957. The more important inspections comprised the following: weighing machines including scales of all kinds, 227,118; measuring machines for liquids, 97,359; weights, 131,994; other measures, 18,112. Total expenditure was \$1,019,513 in the year ended Mar. 31, 1959 compared with \$966,157 in the previous fiscal year and total revenue \$802,149 compared with \$747,745.

* Prepared by R. W. MacLean, Director, Standards Division, Department of Trade and Commerce, Ottawa.

Electricity and Gas Inspection.—Responsibilities of the Standards Division under the Electricity Inspection Act (RSC 1952, c. 94) and the Gas Inspection Act (RSC 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 21 districts for administration of the two Acts and staff numbers 185. During the year ended Mar. 31, 1959, 1,153,516 electricity and gas meters were tested as compared with 1,191,180 in the preceding year. Revenue derived from the testing amounted to \$903,087 and expenditure to \$949,805.

1.—Electricity and Gas Meter Registrations, 1950-59

Year	Electricity Meters	Gas Meters			
		Manufactured Gas	Natural Gas	Petroleum Gas	Total
	No.	No.	No.	No.	No.
1950.....	3,405,342	610,096	252,468	33	862,602 ¹
1951.....	3,591,056	609,062	264,154	68	873,289 ¹
1952.....	3,779,868	599,140	277,248	1,270	877,663 ¹

1959.....	5,157,495	32,799	1,162,678	4,266	1,199,743

¹ Includes five acetylene meters in 1950, 1951 and 1952 and four in 1953, 1954 and 1955.

Section 5.—Government Aid to Small Business

The Small Business Branch of the Department of Trade and Commerce was established in November 1958 to provide liaison between the Government and small business, to study the problems of small business, and to advise the Government on measures that should be taken to meet them. More specifically, the functions of the Branch are as follows: (a) to act as a clearing house in referring inquiries of small business to the appropriate departments of government—federal, provincial and municipal—and to other organizations and institutions; (b) to compile and distribute bulletins and reports on topics of general interest to small business, including information on government procurement; (c) to assist small business, on request, in obtaining statistical, technical, and other information on management, production and marketing problems; (d) to undertake studies concerning small business, particularly for the guidance of the Government in developing new policies in this field, and as background material for dealing more effectively with the problems of small business; (e) to consult and co-operate with educational institutions, representative business associations and other private organizations.

Section 6.—Patents, Copyrights and Trade Marks*

Letters patent are issued subject to the provisions of the Patent Act (RSC 1952, c. 203), effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

* The material relating to patents and copyrights was revised by J. W. T. Michel, Commissioner of Patents, and that relating to trade marks by J. P. McCaffrey, Registrar of Trade Marks, Department of the Secretary of State, Ottawa.

2.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1955-59

Item		1955	1956	1957	1958	1959
Applications for patents.....	No.	19,448	21,048	21,762	22,257	22,912

Assignments.....	"	20,062	17,783	19,124	19,744	20,208
Fees received, net.....	\$	1,086,278	1,234,810	1,405,136	1,438,218	1,583,145

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 18,293 in the year ended Mar. 31, 1959. Roughly, 70 p.c. of the patents granted were to residents of the United States, 10 p.c. to residents of the United Kingdom and other Commonwealth countries and 5 p.c. to residents of Canada.

Printed copies of patents issued from Jan. 1, 1948 to date are available at a nominal fee. The Canadian *Patent Office Record* gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1872 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland, Japan, Korea and Brazil.

Copyrights, Industrial Designs and Timber Marks.—Registration of copyright is governed by Copyright Act (RSC 1952, c. 55) in force since 1921. Applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada ... in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol ... or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States of America.

Protection of industrial designs and of timber marks is afforded under the Trade Mark and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office and information regarding them is published in the *Patent Office Record*.

3.—Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1955-59

Item		1955	1956	1957	1958	1959

Fees received, net.....	\$	21,324	21,747	21,028	21,986	23,440

Trade Marks.—The Trade Marks Office, a Branch of the Department of the Secretary of State, administers the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Industrial Design and Union Label Act and the Shop Cards Registration Act. All correspondence relating to an application for registration of a trade mark or for the use of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

A *Trade Marks Journal* is published weekly giving particulars of every registration of a trade mark and every registration of a registered user, as well as other advertisements and rulings required under the Act. The required fee payable on application for registration of a trade mark is \$25 and for registration of a person as a registered user of a trade mark, \$20.

Section 7.—Subventions and Bounties on Coal*

A major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years, were designed to further the movement of Canadian coals to some portions of Central Canada by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. Subventions have been regulated by Orders in Council; it has not been considered practicable to fix the assistance by statute because of frequent changes in the competitive situation.

Section 8.—Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1958, provincial government liquor control authorities operated 765 retail stores.

Table 6 shows revenue from administration of liquor control by provincial and territorial governments. Details are given in DBS report, *The Control and Sale of Alcoholic Beverages in Canada* (Catalogue No. 63-202).

6.—Provincial Revenue from Administration of Liquor Control, Years Ended Mar. 31, 1957 and 1958

NOTE.—Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail sales tax on alcoholic beverages imposed by five provinces.

PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

The two Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures; thus the statistics presented in each Section are not comparable with those given in the other Section.

Section 1 is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values

actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in Section 2.

Section 2 is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-up Act) but does not include failures, sales or seizures carried out apart from such federal legislation. The Dominion Bureau of Statistics coverage was revised from January 1955 to include business failures only (see p. 975). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

Section 1.—Administration of Bankrupt Estates*

Federal insolvency legislation now comprises the Bankruptcy Act 1949 (RSC 1952, c. 14), the Farmers' Creditors Arrangement Act 1943 (RSC 1952, c. 111), the Companies' Creditors Arrangement Act and to some extent the Winding-Up Act. The two Arrangement Acts are designed to avert failure and the statistics in this Section and in Section 2 therefore do not include proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose, the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act or, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

* Prepared by the Superintendent of Bankruptcy, Ottawa. Early bankruptcy and insolvency legislation is reviewed in the 1952-53 Year Book, pp. 914-915.

² In addition to the amount paid to creditors by the trustee, secured creditors realized direct from their security approximately \$18,196,166.

Section 2.—Returns under the Bankruptcy and Winding-Up Acts as compiled by the Dominion Bureau of Statistics

The statistics concerning bankruptcies and insolvencies published by the Dominion Bureau of Statistics cover only the failures coming under federal legislation, i.e., the Bankruptcy Act and the Winding-Up Act. Certain documents relating to estates administered under these Acts have, since July 1920, been forwarded to the Dominion Statistician for statistical analysis. The Bankruptcy Act of 1949 altered the administration of bankruptcies by providing for proposals from insolvent persons. Since July 1950, agreements made under this method have not been included with the statistics of bankruptcy, so that subsequent figures are not strictly comparable with those for previous years. In Table 2 the number of proposals for recent years is shown so as to give a general impression of the trend.

A major revision made in the compilation and presentation of commercial failures statistics by the Dominion Bureau of Statistics extends back to January 1955. The revised series covers business failures only, excluding failures of individuals such as wage-earners, salesmen and executive personnel, formerly included. In Tables 2, 3 and 4 figures for the year 1955 are given on both the old and new bases, so as to show the extent to which the series was altered by the revision.

2.—Bankruptcies and Insolvencies under Federal Legislation, by Province, 1949-58

NOTE.—Figures from 1923 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

PART IV.—PRICES*

Section 1.—Index Numbers of Wholesale Prices

The term "wholesale prices" refers in this Section to sales transactions that occur below the retail level; it has more of a connotation of bulk purchase than of any homogeneous level of distribution. Ingredients for the general wholesale price index are obtained mainly from manufacturers but include prices from wholesalers proper, assemblers of primary products, agents and the other types of commercial enterprises who trade in commodities of a type or in quantities characteristic of primary marketing functions. Wholesale price indexes are grouped according to a commodity classification scheme based on chief component material similarities. In addition, indexes classified according to degree of manufacture are available. For the latter, however, because significant groups of manufactured products are not directly included, tabulations are not attempted on narrower bases than "Raw and Partly Manufactured" and "Fully and Chiefly Manufactured" commodity groups. Wholesale price indexes are regularly released in the DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002) which contains related current series on retail and security prices. Volume 23 of that publication is a historical summary reaching back to the year 1867 for some series and, together with DBS Reference Paper No. 24, *Wholesale Prices Indexes 1913-1950*, contains an explanation of index construction and meaning.

The number and identity of commodities contained in the index has been virtually fixed since 1951 when the index was placed on a 1935-39 base. Commodities were included either because they bulked large in total marketings at that time or because they were considered reliable indicators of price change for commodity groups that did. Price movements displayed by the commodities priced are combined in such a way that they influence composite indexes in the proportions of total marketings including imports and exports during the base period.

General wholesale price indexes have been calculated by most countries for many years but the question "What does a general wholesale price index measure?" cannot be given a precise answer. A retail price index can be identified with consumer expenditure, but a general wholesale index covers a much wider range; yet it is not a measure of the purchasing power of money since it does not include prices of land, labour, securities or services, except in so far as prices of these things enter into commodity prices. As a conventional summary figure, its use has tended toward a reference level against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials. Thus, special wholesale groupings and commodity price relatives are now considered to be of greater importance than the general index itself.

Component indexes and individual price series have numerous uses. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses include: studies of replacement and construction costs in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuation for tax purposes and inventory analysis; and studies in changes of physical volume. They are also used by business firms abroad in connection with sales and purchases in Canada.

The general wholesale index remained almost unchanged during 1959, standing at 229.7 in December as compared with 229.3 a year earlier. Annual average price levels in 1959 were slightly higher, however, as a result of minor gains recorded between October 1958 and February 1959.

The upward movement in the chemical products group, which began during the latter half of 1958, continued and the index rose 1.9 p.c. from 184.5 to 188.0 in the 12-month period ended December 1959. Soaps and detergents, tanning materials, and prepared paints

* Revised in the Prices Division, Dominion Bureau of Statistics.

were the chief contributors to the increase. Higher prices for fir and cedar between December 1958 and February 1959 caused the wood products group to rise sharply and it held steady for the remainder of the year to stand at 303.4 in December, an increase of 1.6 p.c. over the corresponding month a year earlier. The non-ferrous metals group increased by 1.8 p.c. during the year from 172.7 to 175.8, mainly on the strength of higher prices for copper and its products and for zinc and its products. The vegetable products group fluctuated mildly during the year to arrive at 200.3 in December, an increase of 1.2 p.c. over the December 1958 index of 197.9. Slight advances in the textile products group in the first six months of 1959 were partially offset by lower prices in the second half of the year, restricting the index to an over-all increase of less than 1.0 p.c. between December 1958 and December 1959. Negligible changes occurred in the iron products group during the course of 1959.

From early 1959, sporadic increases occurred in the animal products group until September, when the index dropped sharply from 258.6 to 247.4 at the year's end. Lower prices for hides and skins, leather, livestock, fresh and cured meats, and eggs contributed substantially to the downward movement in this index which was lower by 3.0 p.c. in December 1959 than at the end of 1958. The non-metallic minerals group, reacting to lower prices for coal and petroleum products, declined between March and June, but remained fairly stable throughout the remainder of the year to stand at 185.7 in December, 1.6 p.c. lower than the previous December's index of 188.8.

1.—Annual Index Numbers of Wholesale Price Groups 1950-59, and Monthly Indexes 1958 to Mid-1960

NOTE.—Canadian farm products indexes subsequent to July 1959 are subject to revision; other indexes are final to the end of 1959.

¹ Wheat prices used in this index are Canadian Wheat Board buying prices for Nos. 1, 2 and 3 Manitoba Northern at Fort William-Port Arthur. The initial payment is first used and the index revised as further payments are announced. Between August 1945 and July 1950 the price included for No. 1 Manitoba Northern was \$1.83 per bushel. For subsequent crop years the price was as follows: 1950-51, \$1.85; 1951-52, \$1.83; 1952-53, \$1.82; 1953-54, \$1.56; 1954-55, \$1.65; 1955-56, \$1.61; 1956-57, \$1.56; 1957-58, \$1.61; and 1958-59, \$1.594. For the crop year 1959-60 the index is based on an initial price of \$1.40. Western oats and barley were brought under control of the Canadian Wheat Board on Aug. 1, 1949. Since then prices used for the Canadian farm products index have been initial payments to farmers, with participation payments included whenever announced.

Index Numbers of Building Materials Prices.—Price movements of materials entering into building construction are currently measured by two special-purpose series: price index numbers of residential building materials and price index numbers of non-residential building materials, for which the base years are 1935-39 and 1949, respectively. Details of weighting and construction and historical series may be found in the special bulletins prepared at the time the indexes were first published.* More recently the composite indexes have been calculated on an annual basis back to 1913; current indexes are published monthly in *DBS Bulletin Prices and Price Indexes* (Catalogue No. 62-002).

Building material prices in 1959 were slightly higher on average than in 1958 as the annual index for residential building material prices rose from 127.3 to 130.0 and the non-residential series from 129.8 to 131.7. These increases reflected advances for lumber which were partially cancelled after the mid-year, and for the electrical component, and a decline in roofing which was caused by sharply lower prices for asbestos shingles.

* *Price Index Numbers of Residential Building Materials, 1926-48* (Catalogue No. 62-505) and *Price Index Numbers of Non-residential Building Materials, 1935-52* (Catalogue No. 62-506). Revised item and weighting for the electrical component of the residential building materials index, effective July 1959, is available on request.

Section 2.—Consumer Price Index

The consumer price index is Canada's official measure of retail price change, the fifth in a series of Canadian index numbers of retail prices dating back to 1913. The current index was introduced by the Dominion Bureau of Statistics in October 1952 in a publication entitled *Consumer Price Index, January 1949–August 1952*, (Catalogue No. 62-502). That publication contains detailed information on such aspects of the index as purpose, family coverage, base period, items included and their relative importance; it also shows the formula used in calculating the index, outlines methods of price collection and explains special features, such as methods of incorporating seasonal variations in food consumption, and changes in the price element of home-ownership costs.

Consumer Price Index Movements.—The 15 years of almost continuous economic growth following the end of the Second World War have experienced several distinct periods of retail price behaviour, the latest of which was in evidence throughout 1959.

The gradual relaxation of price controls in 1946 combined with consumer demands far in excess of supply brought on a period of rapidly advancing prices, so that between 1946 and 1948 the consumer price index advanced more than 25 p.c. A significant exception to these general price increases was the behaviour of rents which, continuing under some degree of control, increased only 7 p.c. in the same period.

Toward the end of 1948, production appeared to be matching consumer demands and, during the slight recession of 1949, consumer prices levelled off. Between the latter months of 1948 and May 1950, retail prices increased only slightly more than 1 p.c. However, with the outbreak of war in Korea in June 1950 came a resurgence of pressure on prices and in the course of the next 18 months further major upward movements took place. The consumer price index rose from 102.7 in July 1950 to 118.1 by December 1951, an increase of 15 p.c. Food advanced sharply from 102.6 to 122.5 or by 20 p.c. The shelter index, based on both home-ownership and rents—the latter freed from most of the war-time controls—moved from 107.4 to 118.2, or by about 10 p.c. Clothing experienced a

more substantial rise of 16 p.c. from 99.1 to 115.2. Household operation, covering such items as furniture, appliances and fuel, rose about the same degree, from 101.6 to 116.4. The wide variety of goods and services covered in the other commodities and services index followed a somewhat similar pattern, moving from 102.4 to 115.0.

The peak in consumer price levels was reached in January 1952 when the index stood at 118.2, dropping off gradually in the first half of 1952 to reach 115.9 in May, mainly as a result of a drop of about 5 p.c. in the food index. From this point a plateau in retail prices was established which lasted for four years. Over this period, the consumer price index displayed noteworthy stability, ranging narrowly from a low of 114.4 to a high of 116.9. Though the general level of prices remained almost unchanged during this lengthy period, significant variations were taking place around a stable average. Foods recorded mostly seasonal movements during 1953, 1954, 1955 and the first half of 1956. Non-food commodities experienced a decline of about 3 p.c. in a steady gradually downward movement, much of it accounted for by appliances which moved down 17 p.c. On the other hand, rents advanced steadily to stand 13 p.c. higher in May 1956 than in May 1952. The entire group of service items also experienced continuous increases throughout this period.

From May 1956 a distinct change occurred in price patterns. A trend toward higher prices continued throughout the remainder of 1956 and the first ten months of 1957 and the total index moved up steadily from 116.6 to a new postwar peak of 123.4 in October 1957. Food, which was the component responsible for most of the upward movement at the total index level, rose from 109.3 in May 1956 to 121.9 by September 1957. Shelter continued to advance steadily, although at a slightly moderating rate, as did other commodities and services, particularly the service elements. In contrast, clothing prices remained practically unchanged and household operation, continuing to reflect the easy price situation of major household appliances, rose only 2.8 p.c.

The most recent period of upward movement in the consumer price index, which began in mid-1956 and continued throughout 1957, persisted in 1958 but with some evidence of moderating. Over the year 1958, consumer prices averaged 2.6 p.c. above the previous year, while 1957 prices were 3.2 p.c. above 1956. In the fourth quarter of 1958 consumer prices averaged 2.4 p.c. higher than in the same period a year earlier, while the fourth quarter of 1957 saw prices 2.6 p.c. above the fourth quarter of 1956.

During 1959, the upward movement in the consumer price index was far less marked than in the preceding years. For the year 1959 as a whole, the average level of consumer prices increased by 1.1 p.c. as compared with increases of 2.6 p.c. and 3.2 p.c. in 1958 and 1957, respectively. The index declined during the first four months of 1959 from 126.2 in December 1958 to 125.4 in April, 1959. The decline was reversed in May and consumer prices reached a high of 128.3 in November and declined slightly in December to stand at 127.9. As in the case of the total index, all major groups, with the exception of the food component, averaged slightly higher in 1959 than in 1958. The increases in 1959, however, were mostly smaller than in the previous years. The largest increase in 1959, as in earlier years, occurred in the index of other goods and services where prices rose 3.1 p.c. This compared with increases of 3.8 p.c. in 1958 and 4.3 p.c. in 1957. Clothing prices were fractionally higher while shelter and household operation indexes rose by 2.2 p.c. and 1.4 p.c., respectively. The most significant change occurred in food prices which were fractionally lower on average in 1959. This was in marked contrast to increases of 3.0 p.c. in 1958 and 4.6 p.c. in 1957. From 1953 to 1956, the downward movement in food prices had offset increases in other components and provided stability in the total index, a condition that reappeared in 1959.

During the first half of 1960, consumer prices remained relatively steady, the January and July indexes being at the same level. Although some changes occurred at the group level, shelter and other commodities and services were the only group indexes to show any degree of upward movement. The food, clothing and household operation indexes were almost unchanged during the half year.

5.—Annual Consumer Price Index Numbers 1950-59, and Monthly Indexes 1958 to Mid-1960

Table 6 provides single commodity price relatives on the base 1949 = 100 for a number of important foods entering into the food component of the consumer price index. It also provides a record of average prices based on the actual average level of prices prevailing in October 1952 and calculated for the other months on the basis of the price relatives.

Consumer Price Indexes for Regional Cities.—Table 7 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparison. Their function is to measure percentage changes in retail prices—over a certain time in each city or city combination—of a fixed basket of goods and services representing the level of consumption of a particular group of families.

World Retail Price Indexes.—In order to place changes in Canadian retail prices in perspective with those occurring elsewhere, Table 8 provides retail price indexes for selected countries for 1956, 1957 and 1958. These indexes measure price change only within each country and should not be used to compare actual levels of living costs from country to country.

Section 3.—Index Numbers of Security Prices

Investors price indexes for common stocks are calculated on the 1935-39 base and published weekly and monthly for a sample of issues, broadly classified under the headings: industrials, public utilities and banks. Within the first category the sample is further classified by industry. Weekly and monthly indexes of mining stocks including both golds and base metals are calculated and published separately, as are monthly indexes of preferred stocks.

For purposes of index calculation, Thursday closing prices are used for the issues of companies listed on either or both the Montreal and Toronto stock exchanges. Weights are applied to each issue on the basis of the number of shares currently outstanding. The list of stocks included in the various security series, currently totalling 92 for the investors index and 28 for the mining stocks index, are revised annually so that issues which have become important in stock market activity may be included and those of declining interest removed. Provision is also made for stock splits, mergers and the exercise of 'rights'. The indexes are designed to reflect weekly and monthly changes of interest to the investor rather than day-to-day changes of more speculative interest. For that reason the historical record of indexes dating back to January 1914 on a monthly basis* is of significance in any analysis of the degree of fluctuation in stock prices through time.

Investors Index.—A continuation of the strong upward trend inaugurated with the inception of the bull market in December 1953 culminated in an all-time peak in the investors total index of 291.8 in August 1956; the September 1929 peak was 197.8. Subsequent sharp declines which brought the level to 262.3 by November 1956, were reversed in December, and by May 1957 losses had been largely recouped. At mid-1957 prices broke sharply and continued in a seven-month slide to 215.4 in January 1958. At this point the index swung upward to 262.1 in October, continued slowly higher to 279.3 in July 1959, broke sharply in September, and in December rallied once more to close the year at 261.5, for a net loss of 1.7 p.c. from January 1959. Among major groups the January-December changes were: industrials -2.2 p.c., utilities -4.2 p.c., banks +6.0 p.c. Sub-group declines were led by oils, food and allied products and transportation, while gains were headed by industrial mines, machinery and equipment, pulp and paper, textiles and clothing, and milling.

However, during the first half of 1960 the downward trend was again evident, the index fluctuating from 259.2 in January to 243.6 by July, a decrease of 6.0 p.c. In the period January-July 1960, changes among major groups were: industrials -6.6 p.c., utilities -1.9 p.c., banks -6.4 p.c., mining -16.5 p.c. and preferred stocks +6.5 p.c. Sub-group increases were apparent only in telephone, food and allied products, and industrial mines; declines were led by golds, building materials, and machinery and equipment.

Mining Stocks.—Mining stocks continued the upward trend evident throughout 1958 to reach 126.6 at March 1959, after which weakness set in which lowered the index to 112.8 in December, down 2.8 p.c. from the previous December and 10.9 p.c. from March. Base metals closed the year at 182.8, down 7.4 p.c. from December and 16.7 p.c. below the April high of 201.2. Golds showed a small net gain of 2.1 p.c. in the annual comparison and a smaller loss of 5.7 p.c. from the high of 87.3 in July.

Preferred Stocks.—The index of preferred stocks showed little change in 1959 until August, when a downward trend set in which by December had brought the index to 149.9, down 6.2 p.c. from December 1958. By February 1960 the index had declined to its lowest point since November 1957 and then began to rise, reaching 158.7 by July.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The subject of foreign trade covers more than the treatment of imports and exports of commodities, important though this is. In its broader sense foreign trade is made up of the total international exchanges of goods, services, securities and other financial exchanges, all of which are presented in their proper relationship in this Chapter. Following Part I, which is a review of Canada's trade during recent years, Part II gives detailed statistics of external commodity trade. Part III summarizes external transactions from the standpoint of the balance of international payments. Part IV outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure.

PART I.—RECENT DEVELOPMENTS IN CANADA'S FOREIGN TRADE*

Canada's foreign trade rose to a new high level in 1959, reflecting generally prosperous economic conditions at home and abroad. Over the past few years, the sharp expansion of Canadian external trade in 1955 and 1956 was associated with strong foreign demand for most mineral and forest exports as well as with the unprecedented progress in the exploration and development of Canada's natural resources; at the same time, the accelerated pace of capital investment and consumer expenditure was responsible for the marked upturn in imports. But in 1957 and 1958 foreign markets lost some of their previous strength and domestic economic activity slackened. Canada's trade levelled off in 1957, a slight increase in the export total being somewhat more than offset by a small decline in imports. In 1958, exports were maintained in the face of generally unfavourable world conditions, partly owing to somewhat fortuitous circumstances, but imports were further reduced by 7.7 p.c.

* Prepared in the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

In 1959, influenced mainly by rising demand for industrial materials in the United States, total exports rose 5.1 p.c. to \$5,179,400,000, the highest value on record. Imports, with most of the increase taking place in capital equipment and consumer durables, rose 8.9 p.c. to \$5,654,400,000 and were only fractionally below the record value reached in 1956. The import balance, which in 1957 declined moderately from the 1956 peak of \$842,300,000 and in 1958 fell markedly to \$266,100,000, increased in 1959 to \$475,000,000.

The export price index rose 2.0 p.c. to 123.0 (1948=100) in 1959, while the average import price level declined by 1.6 p.c. to 114.6, with the resulting improvement in the terms of trade. Since the average export price level went up only slightly, a greater part of the increase in the value of exports can be attributed to a larger volume of export shipments, which was some 3 p.c. higher than in 1958. On the other hand, in view of the small decline in the import price index, the volume of imports rose by some 11 p.c., even more than the value of import shipments. On a seasonally adjusted basis, total exports declined in the first quarter of 1959 from the level of the fourth quarter of 1958, rose in the second quarter of the year, decreased very slightly in the third and were at their highest recorded level in the fourth quarter of 1959. Seasonally adjusted imports were at about the same level in the first quarter of 1959 as in the last quarter of 1958, rose in the second quarter and, following a very slight decline in the third, moved up a little in the fourth quarter of 1959 to just under the level of the second three-month period of the year.

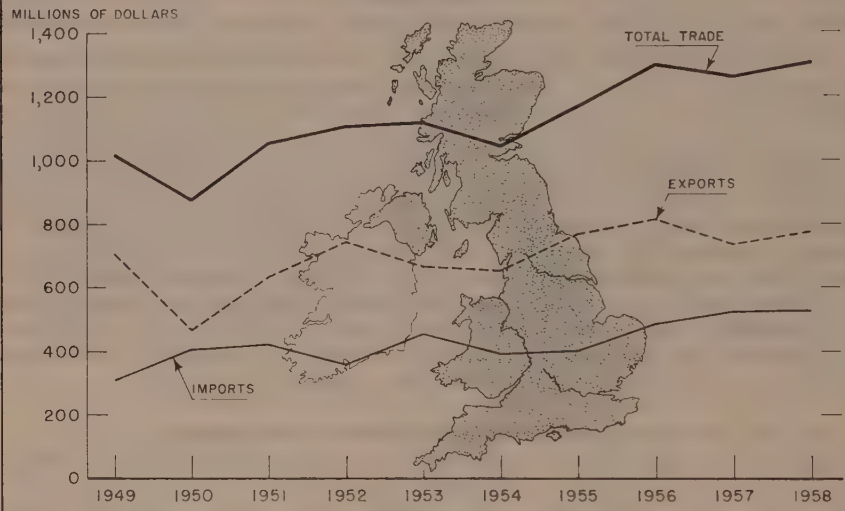

1.—Summary Statistics of Canadian Trade, 1955-59

Item	1955	1956	1957	1958	1959	Change

¹ Less than 0.1 p.c.

The increase in the value of exports to the United States in 1959 exceeded that in the export total to all countries by about one-sixth. Exports to the United Kingdom more than held their own and an increase of one-third was registered in exports to Japan. However, there was some decline in exports to the Commonwealth and Latin America and a more marked drop in exports to Europe. The increase in imports from the United States accounted for over half of that in the import total from all countries. Considerable increases were registered for imports from the United Kingdom, the Commonwealth and Europe and imports from Japan were almost 50 p.c. higher, but imports from Latin America were slightly reduced.

CANADIAN TRADE WITH THE UNITED KINGDOM,
1949-58

CANADIAN TRADE WITH THE UNITED STATES,
1949-58

In relative terms, in 1959 the United States provided a market for 62.1 p.c. of Canada's total exports as compared with 59.2 p.c. in 1958. The proportion of Canadian exports going to the United Kingdom declined from 15.8 p.c. to 15.4 p.c., and the export shares of the Commonwealth, Europe and Latin America were reduced, respectively, from 6.0 p.c. to 5.5 p.c., from 11.6 p.c. to 9.5 p.c. and from 3.7 p.c. to 3.4 p.c. The United States was in 1959 the source of 67.7 p.c. of Canada's imports as against 68.8 p.c. in 1958. The proportion of Canadian imports coming from the United Kingdom went up from 10.2 p.c. to 10.5 p.c. The import share of the Commonwealth rose from 4.1 p.c. to 4.4 p.c., the share of Europe remained unchanged at 6.2 p.c. and the share of Latin America was reduced from 6.7 p.c. to 6.0 p.c.

The importance of foreign trade to the Canadian economy is reflected in the relatively high ratio of exports and imports to the gross national product, as well as in the leading position this country holds among the major trading nations of the world. On a per capita basis, Canada normally ranks ahead of almost every other country—in 1957 Canada was second only to New Zealand and in 1958 to Belgium and Luxembourg. In absolute terms, in recent years Canada has ranked fourth in value of total trade, following the United States, the United Kingdom and the Federal Republic of Germany.

¹ Includes military aid extended to other countries. ² Excludes China, Union of Soviet Socialist Republics, and the communist countries of Eastern Europe (except Yugoslavia).

Main Commodity Changes.—Exports.—Metals and minerals and forest products contributed most to the over-all export increase in 1959. Exports of iron and products, stimulated by the prolonged steel strike in the United States, registered the largest relative gain of 30.3 p.c. among the main commodity groups and reached a record postwar value of \$563,300,000. In contrast to 1958 when all the leading iron and steel products except farm implements lost ground, increases took place in 1959 in every major commodity of this group. Rolling-mill products, which declined somewhat in the previous year, increased in value by 68.1 p.c. to \$53,500,000. Iron ore, which fell by almost one-third in 1958, went up by 46.6 p.c. to \$157,800,000 and accounted for over one-fifth of the total export gain in 1959. Farm implements and machinery rose by 17.5 p.c. to \$110,200,000 or at about half the rate of increase in the previous year. Engines and boilers, up by 17.9 p.c., exceeded somewhat the level of 1957. Non-farm machinery showed some increase but not nearly enough to regain the ground lost in 1958. Pigs, ingots, blooms and billets

rose by 34.4 p.c., which was sufficient to recover only about half of the decline in the previous year. There was a gain of over one-quarter for automobile parts, and exports of tubes, pipes and fittings, relatively small until recently, trebled in value to \$16,500,000.

Exports of non-ferrous metals in 1959 stood at \$1,114,600,000 with a gain of 8.9 p.c. over the previous year, or at twice the rate of increase in 1958. Uranium ores and concentrates, at \$311,900,000, were, as in 1958, the leading mineral export, but gained only 12.8 p.c. as against 116.1 p.c. in 1958. The United States absorbed 90 p.c. of the total and the United Kingdom most of the remainder. Copper went up by 17.6 p.c. to \$158,800,000, more than compensating for the decline of the previous year, with a substantial upturn in the value of exports to the United States but some decrease in the value of exports to all other countries as a group. There were moderate value increases for aluminum to \$230,700,000 and nickel to \$226,900,000 and very small declines for zinc and lead. Among the leading non-ferrous metals and products, electrical apparatus showed the largest relative gain of 30.6 p.c. to \$32,600,000.

Non-metallic minerals and products experienced in 1958 the largest relative decline of 29.9 p.c. among the major commodity groups; crude petroleum, with close to a 50-p.c. fall from the 1957 peak, was responsible for about two-thirds of that decline. In 1959 shipments of petroleum were maintained in a situation of over-supply among the leading producing areas such as the United States, Venezuela and the Middle East. Exports of both asbestos and abrasives rose by over one-fifth, the former sufficiently to exceed the level of 1957 and to set a new value record. The non-metallic minerals and products group as a whole went up by 17.5 p.c. to reach \$294,200,000.

In 1959, forest products were again the largest major commodity group. The 7.2-p.c. increase for the group as a whole more than offset the drop experienced in 1958 and brought the value up to \$1,516,000,000, a level only slightly below the record value of 1955. Newsprint paper at \$722,300,000, as usual the largest export commodity, rose 4.6 p.c. which more than made up for the decline in the previous year. Lumber and timber rose only slightly in 1958 but went up by 10.3 p.c. to \$323,700,000 in 1959; wood pulp, which fell slightly in 1958, rose to \$311,300,000 in 1959, exceeding the level of 1957 by some 6 p.c. Following very small increases in 1958, plywoods and veneers and shingles increased in 1959 by 43.6 p.c. and 8.0 p.c., respectively. Exports of pulpwood were again lower, but declined only at about half the rate of decline in 1958.

The chemicals group at \$201,700,000 again showed a small over-all gain, with increases for fertilizers and synthetic plastics. Exports of fibres, textiles and products rose 21.0 p.c. to \$25,000,000, regaining about two-thirds of the 1958 decline, but the miscellaneous commodities group fell sharply as a result of a \$84,000,000 drop in exports of aircraft; exports of aircraft in 1958 were boosted by special shipments of military aircraft to West Germany and Belgium.

Exports of agricultural and vegetable products declined by 1.9 p.c. to \$368,900,000. Wheat, which in 1958 rose by 17.3 p.c. to \$446,078,000, held close to that level in 1959 when it amounted to \$441,800,000, and was again the second largest export. Shipments to the United Kingdom, accounting for one-third of the total, were slightly lower and there was a marked drop in shipments to India, the Netherlands and Switzerland; on the other hand, exports to West Germany and Japan were higher. Exports of barley fell by 15.1 p.c. to under the level of 1957 and there were also some declines for wheat flour and seeds, including flaxseed and rapeseed. Exports of tobacco were 35.5 p.c. higher and those of whisky rose 11.4 p.c.

Exports of animals and animal products declined 10.5 p.c. to \$356,000,000 in 1959, following a 31.7-p.c. increase in 1958. Shipments of beef cattle, almost all to the United States, which rose from \$600,000 in 1956 to \$42,000,000 in the next year and then more than doubled in 1958 to \$84,000,000, were reduced in 1959 to about level of 1957. There was an over-all decline of about 5 p.c. for fish and fishery products (including fresh and frozen, cured fish and canned fish), although some gain was shown for molluscs and crustaceans. Exports of fresh pork also declined somewhat after having gone up by 85

p.c. in 1958. However, shipments of powdered, condensed and evaporated milk were 58.0 p.c. higher in value following a similar gain in 1958 and there were large increases for butter, cheese and eggs, as well as a slightly higher value for fur skins.

Imports.—The import increase in 1959 was widespread, affecting all the major commodity groups and most leading products. The iron and steel group, with imports of \$2,092,100,000, accounted for about two-thirds of the over-all import decline in 1958 and was responsible for about half the gain in 1959. Among the leading imports in this group, passenger automobiles and farm implements, the only commodities which went counter to the general downtrend in 1958, continued to increase in 1959. Passenger automobiles rose 41.0 p.c. to \$199,600,000, as against 32.8 p.c. in 1958, British and European cars accounting for most of the increase. Farm implements and machinery went up by 25.6 p.c. as compared with 8.6 p.c. in 1958. Non-farm machinery, as usual the largest import category, increased 9.8 p.c. to \$585,200,000 and recovered about half of the decline occurring in 1958. Automobile parts rose by 20 p.c. to \$288,600,000 and more than offset the 1958 decrease. Tractors and parts, which declined by 8.1 p.c. in 1958, advanced in 1959 by 46.7 p.c. to \$172,100,000. Imports of engines and boilers remained unchanged, but slight increases in cooking and heating apparatus and tools and a substantial increase in freight automobiles brought these three categories somewhat above their 1957 levels. Rolling-mill products, at \$131,300,000, continued to decline from the peak of 1956 and returned to slightly above the level of 1955, and pipes, tubes and fittings registered their second consecutive decline dropping to \$55,300,000 from the record value of \$147,700,000 reached in 1957.

The non-metallic minerals and products group, which fell in 1958 by 12.2 p.c. mainly because of a general decline in fuel imports, went up in 1959 by 3.3 p.c. to \$705,600,000. Shipments of petroleum at \$277,500,000, the third ranking import, were virtually unchanged and the same situation prevailed for gasoline. Fuel oils more than made up for a decline in 1958, but imports of bituminous and anthracite coal were lower. Largely as a result of a 12.2-p.c. increase to \$269,400,000 for electrical apparatus and a more moderate increase for bauxite and alumina, the non-ferrous metals group rose by 9.0 p.c. to \$471,300,000 but was still below the level of 1957.

The agricultural and vegetable products group, which registered little change from 1957 to 1958, rose in 1959 by 4.8 p.c. to \$683,800,000. Imports of crude rubber, with a value increase of 69.2 p.c. to \$52,100,000, contributed about two-thirds of the increase for the group as a whole. There were also gains for fruit juices and syrups, and soybeans. At \$56,600,000, imports of raw sugar were somewhat lower in value, following a 22.5-p.c. drop in 1958, and there was also a further decline for coffee. A slight decrease took place in citrus fruits, but there was little change in value of fresh vegetables imported. Imports in the animal products group increased for the fifth consecutive year, with a gain of 13.7 p.c. to \$146,600,000.

Imports in the fibres, textiles and products group went up by 8.5 p.c. to \$420,200,000, following a 5.2-p.c. decline in 1958. The largest increase of 26.4 p.c. took place in apparel, and there were moderate advances in cotton fabrics and synthetic fabrics. Imports of wool fabrics were almost unchanged and those of raw wool increased, but there were lower purchases of raw cotton. The chemicals and allied products group showed a 12.6-p.c. increase to \$327,000,000 in 1959, as against a 1.2-p.c. decrease in 1958, with gains in synthetic plastics and drugs and medicines. The wood, wood products and paper group went up at a much higher rate than in 1958, showing an increase of 15.6 p.c. to \$272,300,000. There were higher imports of paper products and logs, of timber and lumber, and of books, newspapers and magazines. In the miscellaneous products group, an almost 20-p.c. drop for aircraft was offset by gains in refrigerators and freezers, in medical, optical and dental goods and in scientific equipment.

International Background.—The international economy in the postwar years up to the outbreak of the Korean war was conditioned by problems of reconstruction and international economic disequilibrium, associated with inadequate supplies to satisfy

the pent-up demand for both investment and consumer goods as well as with an uneven rate of recovery and growth especially between the industrial and non-industrial countries. While these problems, as reflected in strong world-wide inflationary pressures and widespread balance of payments difficulties particularly among non-dollar countries, caused serious concern, the basic growth factors were also in evidence even in the immediate postwar years. Following the boom and collapse in raw materials which accompanied the Korean hostilities and the subsequent period of readjustment, the world economy has entered since 1953 on a more broadly based phase of expansion, only briefly interrupted by the relatively mild recessions of 1945-55 and 1957-58. During 1953-57, world trade rose by nearly one-third and world industrial production by about one-fifth. The slowdown in economic activity which became apparent on an international scale in the latter part of 1957 and carried forward into 1958, resulted in some decline in industrial production and trade. But in 1959 economic conditions were again generally buoyant, the recovery being especially in evidence in Western Europe, Japan, the United States and Canada, and world trade exceeded the level of 1957 by some 6 p.c. There has also been some general improvement for the primary producing countries under the influence of the sustained flow of aid and investment and as commodity prices, in which the decline from the 1955-56 peak came to a halt in 1958, showed a moderate strengthening in 1959.

As a consequence of the over-all expansion of the world economy in recent years, there has taken place a general strengthening of the international balance of payments and a gradual disappearance of the so-called dollar shortage. In every year since 1950, with the exception of 1957, the United States has had an over-all payments deficit, the net outflow of private capital and government grants and loans exceeding the export surplus. This pattern became accentuated in the past two years as a result of declining exports and increasing imports, and in 1959 the United States export surplus fell to about \$1,000,000,000 and the over-all balance of payments deficit rose to some \$3,700,000,000. In the past ten years the gold reserves of the United States went down from almost \$25,000,000,000 to about \$19,000,000,000, while the remainder of the world increased its holdings of gold and U.S. dollars by approximately \$22,000,000,000. Although most of this gain accrued to Western Europe there was some improvement in the distribution of world reserves during the past few years. Another development tending to strengthen international liquidity was the recent decision to greatly enlarge the resources of the International Monetary Fund and the World Bank for Reconstruction and Development.

As a corollary of the general improvement in the international balance of payments, significant steps have been taken in the past few years in the direction of freer multilateral trade and payments. Many quantitative controls have been eased and tariff concessions have continued to be made among the contracting parties to the General Agreement on Tariffs and Trade. At the end of 1958 the majority of Western European countries, including the Benelux countries, France, Germany, Italy, Norway, Sweden and the United Kingdom, established external convertibility of their currencies, and a few countries in other parts of the world had taken similar steps. Further progress was made in 1959 in the relaxation of trade restrictions; in particular, most Commonwealth countries, including the United Kingdom, liberalized their import controls affecting Canadian exports, pursuant to the decisions made at the Commonwealth Trade and Economic Conference in Montreal in 1958.

In view of the vital importance of free and multilateral trade to Canada's economy, the latest European developments in the field of commercial policy have been of great interest to this country. On Jan. 1, 1958, the European Economic Community (EEC), comprising the Benelux countries, France, Italy and Western Germany, came into being. The EEC is intended to become a customs union in which tariffs among the participating countries will be gradually abolished and a common external policy adopted toward the outside world, as a first step toward the ultimate integration of the respective economies into one single unit. The first reductions of tariffs and increases in quotas among the member countries of the EEC were implemented on Jan. 1, 1959, and some of the concessions were extended to Canada and other countries on a most-favoured-nation basis.

Following the breakdown of negotiations for a European free trade area, which was to comprise all members of the OEEC including the Common Market, a convention for the establishment of the European Free Trade Area (EFTA) was initialled on Nov. 20, 1959, by the governments of Austria, Denmark, Norway, Portugal, Sweden, Switzerland and the United Kingdom. The objective of the EFTA is to create a new European trading group which will eventually result in a free trade area for the participating countries each of whom will, however, retain its own external tariff structure. But unlike the EEC, the EFTA is not aiming at becoming a fully integrated single economic unit. In the case of both these regional groupings, the elimination of internal tariffs is restricted to industrial goods only, with special arrangements for agricultural products, which, in the case of the EEC, would apply internally as well as vis-à-vis the outside world.

From the Canadian point of view, the main question posed by the formation of these two regional groupings is how this new situation will affect Canada's agricultural and other exports to the various member countries. In particular, the common external EEC tariffs on a number of important Canadian exports, such as lumber, wood pulp, synthetic rubber and aluminum, are to be fixed through negotiation among the Common Market countries. Also, with regard to the EFTA, there is the problem of the effect of the gradual disappearance of the preferential tariffs which Canadian exports have traditionally enjoyed in the United Kingdom market.

PART II.—FOREIGN TRADE STATISTICS*

Section 1.—Explanations *re* Canadian Trade Statistics

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be kept in mind:—

Quantities and Values.—In all tables of imports and exports the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.—"Imports" means imports entered for consumption. "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which said merchandise was exported. (See Sects. 35 to 45 and 55 of the Customs Act.)

Canadian Exports: Valuation.—"Canadian produce" exported (domestic exports) includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Foreign Exports: Valuation.—"Foreign produce" exported (re-exports) consists of foreign merchandise that has previously been imported (entered for home consumption) and is exported from Canada unchanged in form. The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Countries to which Trade is Credited.—Imports are classified as received from the countries whence they were consigned to Canada. These countries are not necessarily the countries of actual origin of the goods, since goods produced in one country may be imported by a firm in another country and later re-sold to Canada. In such cases the second country would be the country of consignment to which the goods would be credited.

* Based on statistics taken from reports published by the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

There is one exception to this rule. An attempt is made to classify by country of actual origin imports produced in Central and South America but consigned to Canada from the United States. The effect of this procedure, which has been in force since 1946, is to reduce slightly the imports credited to the United States and to increase those credited to Central and South American countries.

Exports are always credited to the country to which they are consigned.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Among the chief factors contributing to these discrepancies are:—

- (1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
- (2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
- (3) Differing definitions of territorial areas.
- (4) Differing systems of geographical classification of trade, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
- (5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

Treatment of Gold in Trade Statistics.—The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons movements of gold in a primary or semi-fabricated state are excluded from the statistics of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

1.—New Gold Production Available for Export, by Month, 1951-58

NOTE.—Since Mar. 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. Such sales, commencing in April 1956, are now included in the figures for new gold production available for export.

(Millions of dollars)

¹ Less than \$500.

The proportion of imports subject to duty varies widely between countries and geographic areas. Generally the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average *ad valorem* rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average *ad valorem* rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

Detailed Imports and Exports.—Detailed statistics of all commodities of any importance imported into Canada from all countries, from the United Kingdom and from the United States during the calendar years 1956-58 are given in Table 15 and corresponding statistics for domestic exports appear in Table 16.

15.—Principal Imports into Canada for Consumption from All Countries, the United Kingdom and the United States, 1956-58

NOTE.—Throughout this table certain revisions have been made in 1956 and 1957 figures since they were published in the 1959 Year Book. These changes, resulting from revisions in nomenclature or groupings, do not affect the totals.

Section 6.—Comparison of Value, Price and Volume of Foreign Trade

In the postwar period there has been a substantial increase in the value of Canada's exports and imports. Changes in the value of trade, however, are the joint product of changes in the volume of goods traded and in the prices at which transactions are conducted. To assess the significance of value changes, it is desirable to isolate the contributions made to them by the price and volume factors.

Special indexes of export and import prices have been developed to provide this information. These indexes are based chiefly on unit values (average prices) calculated from the trade statistics, supplemented by information on wholesale and retail prices. Price relatives are calculated for a sample of commodities representing the greater part of export and import trade, and these relatives are weighted by the percentage of 1948 trade represented by each commodity in the sample in obtaining group and total indexes. By dividing these price indexes into the trade values the effects of price change are removed from the values, or by dividing the price index into an index of values on the same time-base an index is obtained showing changes in the volume of trade from year to year.

The grouping of commodities used in these calculations differs slightly from that of the regular trade statistics, changes being desirable to simplify the pricing problem. The chief difference is that the first two main groups of the trade statistics have been combined into one group, "agricultural and animal products", and that the sub-group "rubber and its products" has been transferred from this group to the "miscellaneous group".

The import totals differ from those usually published by the exclusion of certain goods brought into Canada by the governments of the United Kingdom and other NATO countries for the use of their defence forces. Table 23 shows the value of trade adjusted for pricing purposes, and the value, price and volume indexes of Canadian trade for 1955-58. In the period covered by this table, import prices as a whole rose steadily, although there was considerable fluctuation in certain individual groups. Export prices, on the other hand, increased in 1955 and 1956, declined very slightly in 1957 and advanced slightly again in 1958. Notwithstanding the increase in import prices, imports were reduced in value in 1957 and 1958 as a result of a significant decline in volume, particularly in the later year; exports in the same year decreased moderately in value but increased in volume.

23.—Declared Values, and Value, Price and Physical Volume Indexes of Foreign Trade, by Commodity Groups, 1955-58

NOTE.—Many of the 1957 figures in this table as well as some of those for previous years have been revised since they were published in the 1959 Year Book.

²Excludes imports for the use of the United Kingdom and other NATO Governments.

³Excludes exports of foreign produce.

PART III.—EXTERNAL TRANSACTIONS*

Section 1.—Canadian Balance of International Payments

Canada's total commercial and financial transactions with other countries are presented in summary form in statements of the Canadian balance of international payments. The current account statement, covering all current exchanges of goods and services, indicates the main categories of transactions giving rise to receipts from and expenditures abroad, and the extent to which these are out of balance. The capital account presents an analysis of the movements of short-term and long-term capital that have occurred during a comparable period.

Each year since 1950, with the exception of 1952, Canada's current expenditures abroad exceeded external current receipts. The current account deficits that resulted in this period of rapid Canadian development were financed by inflows of capital. Current account deficits have customarily been associated with periods of Canadian prosperity, and the rate of recent Canadian growth with the development of new resources has been once again the underlying element in the strength of Canadian demands for imported goods and services. High levels of investment at a time when defence expenditures were also very heavy, together with rising levels of consumption, contributed to the deficits. Until 1956 the deficits in recent years were not large in proportion to the high levels of total current transactions and capital inflows of a long-term type were large enough to finance the deficits in most periods. In 1956 and 1957, as the result of continuing high levels of investment and consumption, the deficits rose to unprecedented peaks of \$1,366,000,000 and \$1,455,000,000; at the same time, inflows of capital in long-term forms rose very sharply. The figure for 1958, reflecting some moderation of economic activity in Canada, was substantially smaller than in the preceding years but nevertheless amounted to \$1,131,000,000. And in 1959 the deficit on current account again reached peak levels at \$1,429,000,000, considerably more than the net inflow of long-term capital.

Current Account Transactions.—There were significant changes in the underlying sources of the deficits on current account of around \$1,400,000,000 that occurred in 1956, 1957 and 1959. The balance on merchandise account† fell between 1956 and 1959 by \$348,000,000 and, at the same time, there was a rise of \$411,000,000 in the deficit from non-merchandise transactions. In 1959 non-merchandise transactions contributed \$1,049,000,000 to the deficit on current account and merchandise transactions contributed \$380,000,000, whereas in 1956 the merchandise deficit had accounted for more than one-half of the total deficit. While the merchandise deficit has varied widely, the deficit on non-merchandise transactions has risen year by year from \$325,000,000 in 1952 to more than three times that figure in 1959.

In recent years the relative importance of exports of materials for industry—in such broad areas as forest products, metals and minerals—has been increasing and the relative position of wheat and some other agricultural products has declined. In addition to new products for export—such as iron ore, petroleum and uranium—there have been general increases in the productive capacity of more traditional staples like pulp and paper, nickel, aluminum and copper. Expansions in demand for industrial materials produced by leading primary industries were responsible for most of a gain of \$266,000,000 in 1959 in merchandise exports, which reached \$5,153,000,000. Merchandise imports rose at the same time by \$467,000,000 to a total of \$5,533,000,000. Imports have demonstrated much more flexibility than exports in recent years. The increases in 1959 were widely distributed as usually occurs in a period of rising economic activity. Details of Canada's foreign trade are covered in Parts I and II of this Chapter.

* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. More detailed information is given in the annual publication *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201), and in *Quarterly Estimates of the Canadian Balance of International Payments* (Catalogue No. 67-001).

† The adjustments from commodity trade statistics to merchandise imports and exports for balance of payments purposes include some items covered elsewhere in the balance of payments, as well as other adjustments necessary to conform to international receipts and payments.

The deficit on non-merchandise transactions has continued to grow with a persistence and significance characteristic of this type of transaction for some years. The 1959 deficit of \$1,049,000,000 was nine times as great as that in 1949 and more than twice as great as that for as recent a year as 1955. This rise is largely attributable to the continued rapid growth in Canada's indebtedness to other countries and to the high level of incomes spent by an enlarged population. More than one-half of this deficit in 1959 is directly related to Canada's indebtedness abroad and subject to the effects of continued growth. Total interest and dividend payments by Canadians to other countries reached \$656,000,000 in 1959. Other forms of transfer of investment income added over \$100,000,000 of related payments, and there were also large payments by Canadian subsidiaries to parent companies for services. Net payments of interest and dividends totalled \$473,000,000 while the net payments on account of all the above groups of transactions which are related to foreign investment amounted to well over \$600,000,000 in 1959, apart from some hundreds of millions of dollars accruing to non-residents which were retained in Canada for further investment and are not included in the current account.

The travel account involves substantial net outlays and reflects high levels of income in Canada. In 1959 net expenditures amounted to \$200,000,000. To these payments were added net deficits of \$90,000,000 from freight and shipping transactions, \$45,000,000 from inheritances and transfers by migrants, and very large net payments of \$389,000,000 covering business services, miscellaneous income, government transactions, and remittances. Against these expenditures there was \$148,000,000 available from new gold production.

The outstanding development in the bilateral pattern of Canada's current account in 1959 was the large deficit of \$214,000,000 that occurred with overseas countries. This replaced a surplus of \$45,000,000 in 1958 and reflected a contraction in the surplus with the United Kingdom and an enlarged deficit with other overseas countries. At the same time the deficit with the United States widened to \$1,215,000,000, although this was smaller than in some earlier years. The current deficit with overseas countries in 1959 contrasts with the former surplus which characteristically played a part in settling Canada's chronic current deficit with the United States.

Capital Movements.—In 1959, Canada again drew substantially on the resources, real and financial, of the remainder of the world. The inflow of capital for direct investment in foreign-controlled establishments during 1959 was placed at \$500,000,000. Transactions in Canadian securities led to a further inflow of \$661,000,000. These two groups of transactions added \$1,161,000,000 to Canadian external liabilities in long-term forms. On the long-term assets side, there were outflows of \$70,000,000 for direct investment abroad and \$36,000,000 for the acquisition of foreign stocks and bonds, but inflows of \$33,000,000 from net repayments on inter-governmental loans. Transactions in these long-term forms led to a net capital import of \$1,088,000,000 which was sufficient to finance about 76 p.c. of the current account deficit; the corresponding inflows of \$1,012,000,000 in 1958 were equivalent to 89 p.c. of the smaller deficit in that year. Including inflows from a reduction in official holdings of gold and foreign exchange offset in part by Canada's increased quota in the International Monetary Fund, and from increased holdings of Canadian dollars by non-residents, all other capital movements led to a net capital inflow of \$341,000,000 in 1959. In both 1958 and 1959 about 80 p.c. of the movement of capital in long-term forms was from the United States.

Inflows of capital for direct investment in foreign-controlled enterprises dominated the capital account of the Canadian balance of payments in most of the postwar years until 1956. These persistent and substantial receipts were directed particularly to resource development and associated industries and by far the largest part of the new capital went into the petroleum and natural gas industry, which has been one of the dynamic developments in the Canadian economy. Substantial amounts also went into other mining industries, particularly for the development of iron ore, and to various branches of manufacturing.

Since 1956 the inflow for direct investment has been dwarfed by the inflow of portfolio capital. This arose in part from substantial sales of outstanding Canadian stocks

as the non-resident investor added to his stake in Canadian growth. The largest factor in the increase, however, has been the voracious demands in the Canadian capital market, some of which have been diverted to foreign capital markets through the sale to non-residents of new issues of Canadian bonds and debentures. Corporation, provincial governments and municipalities have all been important borrowers abroad in recent years.

During this period of large deficits on current account there has been a tendency for a declining proportion to be financed by foreign direct and portfolio investments in Canadian establishments, and larger parts by increases in the net external debt of Canadian governments—federal, provincial and municipal—and in other net external liabilities, mainly short-term in Canada.

Comments and statistics on the effects of the unprecedented capital inflows of recent years upon the ownership of investments in Canada will be found in the Section on Canada's International Investment Position in Chapter XXIII.

Section 2.—Travel between Canada and Other Countries

New records were reached in the volume of travel between Canada and other countries during 1959 as the total number of visits to and from the country moved up from 56,100,000 in 1958 to an estimated 58,100,000, an increase of between 3 and 4 p.c. Visits to Canada by residents of the United States numbered 29,900,000, a gain of nearly 5 p.c., and visits by residents of overseas countries were between 13 and 14 p.c. higher. At the same time, visits to the United States by residents of Canada at 28,000,000 were up only 2 p.c. from 1958 whereas visits by Canadians to overseas countries advanced nearly 19 p.c.

Preliminary figures on expenditures for 1959 show more substantial percentage gains than number of visits. Residents of other countries spent about \$391,000,000 on travel in Canada, an amount 12 p.c. above the corresponding figure for 1958. Receipts from residents of the United States were \$351,000,000 and accounted for all of the increase of \$42,000,000 in total receipts, indicating that the greater number of visits was accompanied by generally higher expenditure per visit; receipts from residents of overseas countries remained unchanged in 1959 at \$40,000,000. During this record travel year, Canadians spent an estimated \$592,000,000 on travel in other countries, which amount was \$50,000,000 or about 9 p.c. higher than in 1958. Expenditures in the United States were \$448,000,000 and accounted for \$35,000,000 of the total increase. At the same time, payments for travel to overseas countries reached a new high of \$144,000,000, an increase of \$15,000,000 or nearly 12 p.c. over 1958. Thus the balance of payments on travel account with the United States decreased from a deficit of \$104,000,000 to one of \$97,000,000, whereas the balance with overseas countries advanced from a debit of \$89,000,000 to one of \$104,000,000. The net debit balance with all countries increased from \$193,000,000 in 1958 to a record \$201,000,000 in 1959.

Only the above summary figures, subject to revision, were available for 1959 at the time of writing; detailed information for 1958 is given in the following text and tables.

During 1958, as shown in Table 6, there were fewer visits made to Canada by non-residents than in the previous year but more visits made by Canadians to other countries. The decrease of 85,700 in total visits to Canada was more than accounted for by a decrease of 88,700 in the number of visitors from the United States as compared with 1957. On the other hand, the number of residents of overseas countries coming to Canada for travel purposes was higher by 3,000.

The increase in visits by Canadians to other countries amounted to 224,400; 212,300 more persons visited the United States and 12,100 more visited overseas countries, representing advances of 10.1 p.c. and 0.8 p.c., respectively, over the corresponding figures for 1957.

¹ As these figures are the number of entries and re-entries into Canada, they include substantial amounts of in-transit, commuting and local traffic.

Travel by Residents of the United States in Canada.—Of the total number of visitors coming to Canada from the United States in 1958, about 79 p.c. travelled by automobile, 86 p.c. of them remaining in the country less than 48 hours and 14 p.c. for longer periods. However, only 55 p.c. of the total expenditures made in Canada by United States visitors in 1958 were made by automobile travellers. This was a slightly higher proportion than in 1957 since most of the decrease in expenditures by United States visitors in 1958 was recorded by the non-automobile classifications. American expenditures in Canada were about \$16,000,000 lower in 1958 than in the previous year, declining from \$325,300,000 to \$309,400,000.

The number of motor vehicles, passenger and commercial, entering Canada from the United States in 1958 was 9,167,380, about 1 p.c. fewer than in 1957. Table 7 shows the number of foreign vehicles coming into Canada through Canadian border points according to type of permit, and the number of Canadian vehicles returning from the United States through these same points during 1957 and 1958 together with percentage change from the earlier to the later year.

Surveys of non-resident motorists travelling in Canada on vehicle permits have been conducted each year since 1955. In 1958 questionnaires were mailed to 128,000 visitors, the majority of whom had remained in Canada for three or more days. About 30 p.c. of those surveyed responded and their replies gave interesting information on patterns of travel behaviour, which followed approximately the same trends as in previous years. Nearly 14 p.c. of the respondents indicated that the trip taken in 1958 was their first to Canada and almost 68 out of every 100 United States residents indicated recreation as the reason for their visit, 23 p.c. reported visits to friends or relatives, 8 p.c. were on business and less than 1 p.c. specified shopping. Education and other purposes accounted for less than 2 p.c. Seasonal variation in purpose of trip was evident. During the third quarter of 1958, 81 p.c. of all respondents travelling in Canada were recreation-bound, in contrast with 38 p.c. in the first quarter. Visiting friends or relatives reached peaks in the first and fourth quarters with 39 p.c. and 38 p.c., respectively, although trips for this purpose did not vary greatly from season to season. On the other hand, business trips accounted for about 21 p.c. of the visits in the first quarter, 16 p.c. in the second, but only 2 p.c. in the third and 13 p.c. in the final quarter of the year.

For the whole year, about 77 p.c. of the persons covered by the questionnaires were adults but the proportion varied from 84 p.c. in the first quarter to 89 p.c. in the second, 72 p.c. during the summer vacation months of the third quarter, and 88 p.c. in the fourth. The highest percentage of adults entered through ports in Nova Scotia, while more children entered through Ontario than any other province.

The most popular form of accommodation for United States motorists travelling in Canada continued to be the motel or motor court, which attracted nearly 30 p.c. of the traffic. About 24 p.c. stayed with friends or relatives and the remainder at vacation cottages, camping grounds, tourist homes and so on. Time of the year, of course, affected type of accommodation and hotels were naturally patronized to a greater extent during the winter months when the use of motel and other accommodation was at a minimum. Type of accommodation also varied with purpose of trip. For example, hotels were used by almost 53 p.c. of those on business but only 22 p.c. of those specifying recreation, 35 p.c. of whom favoured motels or motor courts. About 76 p.c. of the persons visiting Canadian friends or relatives were accommodated in their homes. An analysis of accommodation

by province of entry showed varying results: the volume of travellers using motels or motor courts ranged from almost 61 p.c. in the Yukon Territory to 25 p.c. in Saskatchewan; 28 p.c. of those entering Quebec stayed in hotels, a higher percentage than in any other province; in Saskatchewan, almost 35 p.c. of the visitors stayed with friends or relatives but only 15 p.c. in Alberta specified such accommodation. Vacation cottages continued to be the most popular in Ontario, attracting almost 22 p.c. of its visitors. Tourist homes, most popular with persons entering through Nova Scotia, were of little significance in the western provinces which, however, recorded the highest percentage of campers and trailer coaches.

Survey statistics on mileage showed that United States motorists remaining in Canada one day or less had travelled 153 miles while in Canada, those remaining two days had covered 232 miles and motorists travelling for three days or more had averaged 688 miles. The maximum mileage travelled occurred during the third quarter when motorists remaining three days or more averaged 768 miles. Average mileage by purpose of trip for those respondents staying three days or more shows recreation with 686 miles, business 602 miles, visiting friends and relatives 497 miles, and shopping 270 miles. Mileage was also influenced by destination and province of entry. United States motorists reporting a destination within the province of entry travelled only 501 miles while those proceeding to destinations outside the province averaged 1,396 miles. Generally, all mileages reported were lower than in 1957.

Table 8 shows mileage travelled in Canada reported by United States motorists and Table 9 gives the percentage distribution of destination in Canada of United States motorists, classified by province of entry. The figures show that 21 p.c. of the respondents remaining in the country three days or more travelled beyond the province of entry.

A breakdown of expenditures shows that in 1958, visitors from the United States spent approximately the same proportion of each dollar on the same commodities as in 1957—between 31 and 32 cents on food and beverages, over 22 cents on lodging, 16 cents on transportation and close to 12 cents for other merchandise; 11 cents were spent on items not specified and 7 cents were used to purchase souvenirs and handicrafts.

Canadian Travel in the United States.—During 1958, immigration officials reported a record 27,400,000 border crossings by Canadians re-entering Canada from the United States. Furthermore, the downward trend in rate of increase experienced in previous years was reversed in 1958, when the advance amounted to 1 p.c. compared with an 0.5-p.c. gain in 1957. The increase of 440,000 re-entries recorded in the third and fourth quarters of the year was sufficient to offset a decrease in the first six months. Altogether, 8,726,030 Canadian vehicles re-entered Canada. Of these, 1,374,255 vehicles had been abroad more than 24 hours, 6,784,568 had been absent for 24 hours or fewer and 567,207 were commercial vehicles. The increase over 1957 amounted to 43,925 vehicles or about 0.5 p.c.

Expenditures by Canadians in the United States reached a new high of \$413,300,100, 2.5 p.c. above the 1957 figure. This increase was the result of an \$11,600,000 rise in the expenditures of long-term visitors, accompanied by a curtailment of \$1,400,000 in the spending of the short-term travellers. The average expenditure per visit in the long-term category increased from \$77.84 in 1957 to \$79.52 in 1958, but the average expenditure of the short-term traveller decreased slightly from \$2.54 to \$2.47. Canadian visitors to the United States, regardless of length of stay, averaged \$15.07 per visit or 1.8 p.c. more than in 1957, while the average outlay per person fell from \$24.21 in 1957 to \$23.84 in 1958. The average per visit is lowered considerably by commuter traffic and others who travel to the United States quite frequently. Nevertheless, Canadian average expenditures in the United States are considerably higher than the corresponding averages of United States visitors in Canada.

Purchases of merchandise, as declared under the \$100 customs exemption privilege, remained unchanged from 1957 at \$74,000,000 or \$55.53 per declaration and, comparable with the trend in recent years, continued to account for a smaller proportion of the total outlay.

Travel between Canada and Overseas Countries.—Travel between Canada and overseas countries again expanded during 1958 but at a much lower rate than in the previous year. The number of overseas residents coming to Canada advanced some 8 p.c. and re-entries of Canadians after visiting overseas increased by 10 p.c.; in 1957 the increases recorded for these two categories were 17 p.c. and 14 p.c., respectively. During 1958, 39,600 visitors came to Canada direct from overseas compared with 36,600 in 1957; 26,000 others entered Canada via the United States compared with 25,000 in 1957.

Aircraft as a means of trans-ocean travel continued to gain in popularity—21,415 or approximately 54 p.c. of the visitors coming direct from overseas countries travelled by air in 1958 compared with 19,022 or 52 p.c. in 1957. Canadian air and steamship facilities accommodated about 41 p.c. of the non-immigrant visitors arriving directly from overseas in 1958, down slightly from 1957 yet significantly higher than the 36 p.c. accommodated in 1956. On the other hand, most overseas residents entering Canada via the United States use foreign carriers for transportation to North America.

Residents of the United Kingdom represented a larger proportion (56 p.c.) of visitors in 1958 than in 1957 (54 p.c.); the proportion from other Commonwealth countries remained fairly constant at about 12 p.c., while the proportion arriving from other European countries fell from 27 p.c. to 25 p.c. Those originating in other areas remained unchanged at 7 p.c. Receipts from overseas visitors increased from \$38,000,000 in 1957 to \$40,000,000 in 1958 but this 5-p.c. expansion was appreciably less than the 36-p.c. increase experienced in 1957. It is of interest to note that Canadian air and steamship facilities accounted for more than 50 p.c. of the total receipts. In 1958, 132,000 Canadians returned direct from visits to overseas countries and 42,000 re-entered Canada via the United States.

Information reported by Canadians returning direct to Canada revealed that about 26 p.c., or 10 p.c. less than in 1957, had visited the United Kingdom, the proportion combining trips to the United Kingdom and other European countries remained unchanged at 31 p.c. and the number visiting other European countries advanced to 19 p.c. from 15 p.c. in 1957. The West Indies Federation attracted nearly 6 p.c. of Canadian overseas travellers returning direct and visits to Bermuda represented between 4 and 5 p.c. of the total as compared with 3 p.c. in 1957. Visits to Hawaii and Mexico each accounted for 4 p.c. of the total, the latter proportion remaining unchanged from 1957. Between 2 and 3 p.c. visited a combination of several areas, while about 1 p.c. travelled to Central America and the non-British West Indies. A smaller proportion visited South America, Australia and New Zealand, and other countries.

Season of the year continued to affect destinations reported by Canadians returning direct. Travel to Europe accounted for 53 p.c. of reported destinations in the first quarter of the year, 64 p.c. in the second, 89 in the third and 87 p.c. in the fourth. Visits to the United Kingdom reached a maximum of 32 p.c. in the third quarter and a minimum of 18 p.c. in the second quarter, while people combining visits to the United Kingdom and other Europe accounted for 39 p.c. of total travel in the fourth quarter. Other European countries were most popular during the second quarter of 1958, attracting 21 p.c. of all visitors. Travel to the West Indies Federation and Mexico was heaviest during the first quarter of the year, accounting for 16 p.c. and 12 p.c. of the travellers respectively, whereas visits to these areas were at a minimum during the third quarter of the year. The number of trips to Bermuda reached a peak of 9 p.c. during the second quarter, while Hawaii accounted for almost 7 p.c. of the total during the first half of 1958. It should be noted, however, that percentages of travel to the non-European countries mentioned increase when the category of Canadian re-entries via the United States is considered, since very often the shortest route to these destinations lies through that country.

Of the Canadians returning direct, approximately 44 p.c. had visited friends or relatives and 42 p.c. had sought recreation. The number travelling on business or for educational purposes accounted for 10 p.c. and about 1 p.c., respectively, while 3 p.c. reported health as a reason.

Information on Canadians returning to Canada via the United States was secured for the first time in 1958. Of the estimated 42,000 such re-entries, a larger proportion reported visits to countries which are most easily reached by travel through the United States such as Mexico, the West Indies Federation, Central America, Bermuda and Hawaii, than was reported by persons returning direct to Canada. Mexico attracted 22 p.c. compared with 4 p.c. of those returning direct, while 12 p.c. visited the West Indies Federation compared with 6 p.c. of the direct re-entries. However, a comparison of travel to European countries showed the opposite trend—only 6 p.c. of re-entries via the United States had visited the United Kingdom compared with 26 p.c. of those returning direct, 11 p.c. had visited the United Kingdom plus other European countries compared with 31 p.c., and 10 p.c. reported trips to European countries only as compared with 19 p.c. of the direct re-entries. Length of stay also showed variation, with travellers averaging five days in the United States in addition to spending 36 days in the United Kingdom, 64 days in the United Kingdom and other Europe combined and 60 days in other Europe only. Similar figures for those returning direct revealed lengths of stay averaging 55 days in the United Kingdom, 66 days in other Europe and the United Kingdom combined, and 58 days in other European countries only. Length of stay in countries easily reached by travel through the United States did not differ significantly from that recorded by residents returning direct from overseas. Recreation was the main purpose of trip for almost 59 p.c. of the Canadians re-entering via the United States and 42 p.c. of those returning direct. However, 44 p.c. of those returning direct from overseas specified visits to friends or relatives as compared with only 22 p.c. of the indirect re-entries. The percentages of the two groups reporting on other purposes of trip showed little variation. The majority of those travelling for recreation or health visited areas with warmer climates such as Hawaii and some of the more southerly Commonwealth countries, especially during the first quarter of the year when about 72 p.c. went for recreation and 12 p.c. for health.

Expenditures by Canadians in overseas countries reached a new record of \$129,000,000 in 1958. The rate of expansion has been progressively more moderate in the past few years, the 6-p.c. increase in 1958 comparing with a 14-p.c. increase in 1957. In 1957, for the first time since 1951, receipts from overseas visitors showed a greater percentage gain than the travel payments to overseas countries but in 1958 the former trend was re-established and the growth in payments exceeded that of receipts by approximately 1 p.c. As a result, the debit balance between receipts and payments in the overseas account advanced \$5,000,000 over 1957 to a new high of \$89,000,000 or 46 p.c. of Canada's total deficit on travel account in 1958.

Tourist Information.—Tourist information generally is supplied by the Canadian Government Travel Bureau, Ottawa, and detailed information on the National Parks and Historic Sites is available from the Department of Northern Affairs and National Resources, Ottawa. For advice regarding specific provinces or particular cities or resorts, application should be made to the provincial or municipal Bureau of Information concerned.

PART IV.—THE GOVERNMENT AND FOREIGN TRADE

Section 1.—Foreign Trade Service and Associated Agencies concerned with the Development of Foreign Trade*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore,

* Prepared in the several branches concerned and collated in the Trade Publicity Branch, Department of Trade and Commerce, Ottawa. The work of the Standards Branch and the Small Business Branch of the Department, which are concerned with domestic matters only, is dealt with in the Domestic Trade Chapter, pp. 968-969.

many commodities that are not indigenous to this country must be imported. Some of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with postwar foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives.

The Department of Trade and Commerce and associated agencies are at the disposal of exporters and importers engaged directly in the development of Canada's commercial relations with other countries. Services obtainable from the various branches, divisions and agencies are described below.

Agriculture and Fisheries Branch.—The main functions of this Branch include: trade promotion relating to agricultural and fisheries products; the programming, receiving and distribution of information on foreign agriculture and fisheries; acting as a focal point for liaison on agricultural and fisheries trade matters with the Department of Agriculture, the Department of Fisheries, the Canadian Wheat Board, the Board of Grain Commissioners for Canada, and other government departments and boards; and keeping abreast of developments and attending meetings of international organizations concerned with trade in agricultural products.

In the field of trade promotion, the Grain Division, the Food and Agriculture Division and the Fisheries Division assist Canadian exporters of agricultural and fisheries products in finding markets in other countries. Canadian firms are supplied with information concerning market conditions and requirements in foreign lands, competition from other sources of supply, exchange and tariff restrictions and other related information. Special surveys are made whenever necessary. Trade Commissioners are kept informed on such matters as production and price trends in Canada, quantities of commodities available for export and sources of supply. The Grain Division assists foreign governments and other buyers in the purchase of Canadian wheat, flour and other cereals. Close contact is maintained with the flour millers, as well as daily liaison with the Canadian Wheat Board. The Branch assists in organizing displays of agricultural and fisheries products in trade fairs abroad, including a specialized program of fur promotion.

Commodity Officers concerned with livestock and livestock products, plant products, confectionery, fish and fisheries products keep in contact with the trade and trade organizations dealing with these commodities. They are in close touch with the officers of other departments of government concerned with the disposition of Canadian production surplus to domestic requirements, and those responsible for such items as health standards, grading and inspection.

Much information on foreign agriculture and fisheries is received from Canadian Trade Commissioners. This material, which reflects foreign government policy, production trends and market information, is processed in the Branch and distributed to the departments of government concerned and others interested. The Trade Commissioner Service includes a number of officers who deal specifically with agricultural and fisheries matters. Some of these officers are located in Canada's most important export outlets and others in those countries with which Canada competes on world markets, particularly in such commodities as wheat, coarse grains, livestock, meats, dairy products and fisheries products.

Information received from these agricultural officers and other trade commissioners on agricultural developments in other lands is published in *Foreign Trade* and in bulletins of the Economics Division, Department of Agriculture, and is made available directly to producers and exporters. Fisheries information from abroad is passed to the Department of Fisheries, the provincial governments concerned, the Fisheries Council of Canada and to fish exporters.

Canadian Government Exhibition Commission.—The Canadian Government Exhibition Commission is responsible for the planning, organization and administration of all Canadian exhibits in fairs and exhibitions abroad, in which the Canadian Government decides to participate. In addition, the Commission endeavours to advise private exhibitors and their agents on the best means of displaying Canadian products at overseas fairs. The Commission is also responsible for any international fairs and exhibitions held in Canada, financed and sponsored by the Federal Government.

Commodities Branch.—The principal role of the Commodities Branch is active trade promotion. The Branch provides liaison with industry and the business community in Canada, and passes on information about trade opportunities brought to light by officers of the Department at home and abroad.

The Branch has commodity specialists organized in six divisions: Engineering and Equipment, Minerals and Metals, Forest Products, Chemicals, Consumer Goods, and Transportation and Trade Services. Within these divisions, individual commodity specialists are concerned with such particular groups of products as engineering services and plant equipment, electrical and electronic equipment and transportation equipment, ferrous and non-ferrous metals, lumber, pulp and paper, chemicals and petroleum products and leather and rubber, as well as a wide range of consumer products. Commodity officers visit plants, attend meetings of business associations, prepare trade studies and market surveys, and assist in arranging displays of Canadian goods abroad for the purpose of introducing them in foreign markets. Commodity specialists direct the attention of trade commissioners to changes in supply conditions and to products available for export, and also relay market news received from trade commissioners to Canadian manufacturers and exporters.

The Branch is concerned with the administration of the Export and Import Permits Act and is active in the export control field, including international arrangements for the control of strategic materials. Branch representatives attend international commodity study groups in such products as tin, rubber, cotton, lead and zinc, where major world suppliers and users of the commodity concerned meet to arrange a framework for orderly marketing and price stability in principal world markets. The Branch also acts as a source of commercial intelligence and compiles and distributes trade information essential to the operation of other branches of the Department.

Economic and Technical Assistance Branch.—This Branch administers Canadian foreign aid programs, including Canada's participation in the Colombo Plan for co-operative economic development in South and South-East Asia, the Canada-West Indies Aid Program, and the Commonwealth Technical Assistance Program, which involves the independent African States within the Commonwealth and other Commonwealth countries not included in the Colombo Plan. These programs are designed to help the peoples of less-developed countries to raise their living standards and productivity. The Canadian contribution is of two types: capital and technical assistance. Through the capital assistance program, grants of equipment and services are made to countries in the different areas on a bilateral basis. Technical assistance embraces the training in Canada of individuals from less-developed countries in a variety of fields and the provision of Canadian technical experts to advise and instruct abroad. The funds to finance the different aid programs are voted by Parliament on a yearly basis.

The Branch co-operates with the United Nations and its Specialized Agencies, as well as with the International Co-operation Administration of the United States and other international agencies in recruiting technical experts, and in arranging courses of instruction for trainees sent to Canada under their auspices.

The Branch's work also involves co-operation with a committee set up, in conjunction with the Canadian Universities Foundation, to administer the Commonwealth Fellowship and Scholarship Plan in Canada. The Branch is responsible for financial and administrative arrangements for bringing to Canadian universities candidates selected by the committee.

Energy Studies Branch.—The functions of this Branch were to follow developments *re* Canadian energy sources, prepare studies and advise on particular problems as they arose. The effect of changes in United States oil import restrictions on the Canadian oil industry, Canadian natural gas export policy, and planning and negotiation related to co-operative international development of the Columbia River basin were examples of the specific areas treated by the Branch during 1959. On Nov. 2 of that year most of the Branch functions were taken over by the new National Energy Board (see p. 1066).

Export Credits Insurance Corporation.—The Export Credits Insurance Corporation was established under the provisions of the Export Credits Insurance Act 1944 (amended in 1946, 1948, 1954, 1957 and 1959), and is administered by a Board of Directors that includes the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance. It insures persons carrying on business in Canada against risks involved in the export, manufacture, treatment or distribution of goods or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under three main classifications: general commodities, capital goods, and services. Coverage for general commodities may be procured by exporters under two types of policies: the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or the Shipments Policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received. These policies are issued on a yearly basis, covering exporters' sales to all countries.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit for lengthy periods is often necessary. Specific policies are issued for transactions involving capital goods, but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar service contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services.

The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the distribution of recoveries obtained after payment of a loss; these recoveries are shared by the Corporation and the exporter in the proportions of 85 and 15 p.c., respectively.

Under the Export Credits Insurance Act, Sect. 21, the Corporation may be authorized to enter into certain contracts of insurance, where the Board of Directors of the Corporation is of opinion that a proposed contract of insurance would impose upon the Corporation a liability for a term or in an amount in excess of that which the Corporation would normally undertake, and in the opinion of the Minister of Trade and Commerce it is in the national interest that the proposed contract be entered into. Under Sect. 21A of the Act, the Corporation may be authorized to provide a guarantee in respect of an export transaction. Such a guarantee would be given to the financial institution lending money to the Canadian exporter to carry out the export transaction.

Industrial Development Branch.—This Branch co-ordinates the assistance offered by the Federal Government in the establishment of new industries in Canada. Acting in this capacity, information is provided on a multiplicity of matters pertaining to industry establishments. The Branch assists also in solving the variety of problems encountered by Canadian and foreign business men. It also aids those established firms that wish to expand into new lines of production. Inquiries from foreign firms and individuals regarding the manufacture of products in Canada under licence or royalty are screened and brought to the attention of Canadian manufacturers interested in producing additional items.

The Branch acts in an advisory capacity to the Immigration Branch of the Department of Citizenship and Immigration regarding the admission of individuals, other than those from Commonwealth countries, who wish to establish new industries in Canada. It also works in close co-operation with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, and the Canadian Manufacturers' Association.

International Trade Relations Branch.—The International Trade Relations Branch deals with a wide variety of current trade issues including analysis of developments in international commercial relations, assistance in maintaining and further improving the access for Canadian goods in foreign markets. The Branch endeavours to find practical solutions for tariffs and other difficulties encountered by Canadian exporters. It has under constant review Canada's trading relations with other countries, and participates in conferences and negotiations under the General Agreement on Tariffs and Trade. In addition, the Branch is concerned with work being done in the trade field by other international organizations.

The Branch has a major responsibility for the administration of Canada's existing trade agreements and is responsible for the preparation of material for trade and tariff negotiations with other countries. Information is maintained on foreign tariffs, customs legislation, taxes affecting trade, import licencing, exchange regulations, documentation, sanitary regulations, marking and labelling requirements, and measures pertaining to quotas, embargoes, and other import restrictions. This information is made available to exporters, government officials, and others interested in these regulations, as they affect Canadian export trade. The assistance of the Branch is available to exporters in dealing with difficulties resulting from the trade policies or regulations of other countries.

Trade Publicity Branch.—The principal function of the Trade Publicity Branch is to promote trade between Canada and other countries in the publicity field. It furnishes the commercial community of Canada with information concerning the assistance that exporters and importers may obtain from the Department of Trade and Commerce. The Branch is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to sources of supply for raw materials and consumer goods unobtainable in Canada.

Its principal information medium is *Foreign Trade*, fortnightly publication of the Foreign Trade Service, in which are reproduced reports of Canadian trade commissioners on conditions in their respective territories, articles by Head Office personnel, commodity notes, foreign exchange rates, the itineraries of trade commissioners on tour in Canada, and trade and tariff regulations. A list of trade offices throughout the world is published once a month, and a directory of Head Office at periodic intervals.

Press releases are prepared and distributed to newspapers at home, and material of a similar character is dispatched to Canadian trade commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade

restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The promotional work of this Branch is supported by moderate advertising at home and abroad through the daily press, periodicals and trade papers, and by films and radio.

Trade promotion, through the medium of trade fairs in other lands, is the responsibility of a Division in this Branch, which maintains close liaison with other branches of the Department and agencies of government, and prepares information for consideration by the Committee on Trade Fairs Abroad.

Trade Commissioner Service.—The Trade Commissioner Service is an important instrument in the continuous effort to increase Canadian international trade, to promote world-wide distribution of Canadian products and to locate the best sources of supply for imports. Headquarters are at Ottawa, and 63 offices are maintained in 48 countries, staffed with trained Canadian trade officials and commodity specialists.

Trade commissioners bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products and report on the exact kinds of goods in demand, prices, competitive conditions, trade and exchange regulations, tariffs, shipping and packaging requirements, labelling, etc. Inquiries for Canadian goods are forwarded to the Department at Ottawa or directly to interested Canadian firms. For Canadian importers, trade commissioners seek sources of supply of a wide variety of goods. The preparation of economic and other reports for departmental use is an important activity. Assistance is given to Canadian exhibitors at overseas trade fairs and constant liaison is maintained with the trade departments of foreign governments.

In countries where Canada maintains a diplomatic mission and a trade office, trade commissioners form an integral part of the mission and assume the title of Minister (Commercial), Commercial Counsellor or Commercial Secretary depending upon their rank as Foreign Service Officers. In some foreign countries they act as Consuls General, Consuls or Vice-Consuls according to their status.

In order to provide Canadian manufacturers, exporters and importers with up-to-date information concerning overseas territories more effectively than is possible by correspondence, trade commissioners make tours of Canadian industrial and commercial centres after each period of duty abroad. Such direct contacts enable specific problems to be discussed and at the same time serve to bring into focus for the trade commissioner the Canadian business picture as a whole.

CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT JULY 1, 1960

ARGENTINA.—Commercial Counsellor, Canadian Embassy, Bartolome Mitre 478, Buenos Aires.

AUSTRALIA.—

Canberra: Commercial Secretary, Canadian Embassy, State Circle, Canberra.

Melbourne: Commercial Counsellor, 83 William Street, Melbourne.

Sydney: Commercial Counsellor, 7th Floor, Berger House, 82 Elizabeth Street, Sydney, N.S.W.

AUSTRIA.—Commercial Counsellor, Opernringhof, Opernring 1, Vienna 1. Territory includes Bulgaria, Czechoslovakia, Hungary, Romania and Yugoslavia.

BELGIAN CONGO.—Canadian Government Trade Commissioner, Forescom Bldg., Leopoldville 1. Territory includes Angola, Central African Republic, Chad, Congo, Gabon.

BELGIUM.—Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels. Territory includes Luxembourg.

BRAZIL.—

Rio de Janeiro: Commercial Secretary, Canadian Embassy, Edifício Metropole, Av. Presidente Wilson 165, Rio de Janeiro.

São Paulo: Consul and Trade Commissioner, Canadian Consulate, Edifício Alois, Rua 7 de Abril 252, São Paulo.

- CEYLON.—Commercial Secretary, Office of the High Commissioner for Canada, 6 Gregory's Road, Cinnamon Gardens, Colombo.
- CHILE.—Commercial Secretary, Canadian Embassy, 6th Floor, Av. General Bulnes, 129, Santiago.
- COLOMBIA.—Commercial Secretary and Consul, Canadian Embassy, Edificio Banco de Los Andes, Carrera 10, No. 16-92, Bogota. Territory includes Ecuador.
- CUBA.—Commercial Secretary, Canadian Embassy, Edificio Ambar Motors, Avenida Menocal 16, Havana.
- DENMARK.—Commercial Counsellor, Canadian Embassy, Prinsesse Maries Allé 2, Copenhagen. Territory includes Greenland and Poland.
- DOMINICAN REPUBLIC.—Commercial Counsellor, Canadian Embassy, Edificio Copello 408, Calle El Conde, Ciudad Trujillo. Territory includes Puerto Rico.
- FRANCE.—Commercial Counsellor, Canadian Embassy, 35 Ave. Montaigne, Paris 8°. Territory includes Algeria, Cameroon Republic, Dahomey, Federation of Mali, Guinea, Ivory Coast, Mauretania, Morocco, Niger, Togoland, Tunisia and Volta.
- GERMANY.—
Bonn: Commercial Counsellor, Canadian Embassy, 22 Zitellmannstrasse, Bonn.
Hamburg: Consul, Canadian Consulate, 69 Ferdinandstrasse, Hamburg.
- GHANA.—Commercial Counsellor, Office of the High Commissioner for Canada, E115/3 Independence Ave., Accra. Territory includes Gambia, Liberia and Sierra Leone.
- GREECE.—Commercial Counsellor, Canadian Embassy, 31 Vassilissis Sophias Ave., Athens. Territory includes Israel and Turkey.
- GUATEMALA.—Canadian Government Trade Commissioner, 5 Avenida, 10-68, Zone I, Guatemala City. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.
- HAITI.—Chargé d'Affaires *ad interim* and Consul, Canadian Embassy, Route du Canape Vert, St. Louis de Turgeau, Port au Prince.
- HONG KONG.—Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Bldg., Hong Kong. Territory includes Cambodia, Communist China, Laos, Viet Nam, Macao.
- INDIA.—
New Delhi: Commercial Secretary, Office of the High Commissioner for Canada, 13 Golf Links Area, New Delhi.
Bombay: Canadian Government Trade Commissioner, Gresham Assurance House, Mint Road, Bombay.
- INDONESIA.—Commercial Secretary, Canadian Embassy, Djl. Budi Kemuliaan No. 6, Djakarta.
- IRAN.—Commercial Counsellor, Canadian Legation, Teheran.
- IRELAND.—Commercial Secretary for Canada, 66 Upper O'Connell St., Dublin.
- ITALY.—Commercial Counsellor, Canadian Embassy, Via G. B. de Rossi 27, Rome. Territory includes Libya and Malta.
- JAPAN.—Commercial Counsellor, Canadian Embassy, Tokyo. Territory includes South Korea.
- LEBANON.—Commercial Secretary, Canadian Embassy, Alpha Building, Rue Clemenceau, Beirut. Territory includes Iraq, Jordan, Persian Gulf Area and Syrian region of the United Arab Republic.
- MEXICO.—Commercial Secretary, Canadian Embassy, Melchor Ocampo 463, 7th Floor, Mexico 5, D.F.
- NETHERLANDS.—Commercial Counsellor, Canadian Embassy, Sophialaan 5-7, The Hague.
- NEW ZEALAND.—Commercial Secretary, Office of the High Commissioner for Canada, Government Life Insurance Bldg., Wellington. Territory includes Fiji, Western Samoa and French Oceania.
- NIGERIA.—Commercial Counsellor, 40 Marina St., Ikoyi, Lagos. Address for letters: P.O. Box 851.

- NORWAY.**—Commercial Counsellor, Canadian Embassy, Fridtjof Nansens Plass 5, Oslo. Territory includes Iceland.
- PAKISTAN.**—Commercial Secretary, Office of the High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Territory includes Afghanistan.
- PERU.**—Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Territory includes Bolivia.
- PHILIPPINES.**—Consul General and Trade Commissioner, Canadian Consulate General, Ayala Bldg., Juan Luna Street, Manila. Territory includes Republic of China (Taiwan).
- PORTUGAL.**—Commercial Counsellor, Canadian Embassy, Rua Marques de Fronteira, No. 8-4° D°, Lisbon. Territory includes Azores, Cape Verde Islands, Madeira and Portuguese Guinea.
- RHODESIA AND NYASALAND, FEDERATION OF.**—Canadian Government Trade Commissioner, 8th Floor, Grindlays Bank Chambers, Baker Avenue, Salisbury. Territory includes Kenya, Seychelles Islands, Tanganyika, Uganda and Zanzibar.
- SINGAPORE.**—Canadian Government Trade Commissioner, Rooms 4, 5 and 6, American International Bldg., Robinson Road and Telegraph St., Singapore. Territory includes Brunei, Burma, Federation of Malaya, North Borneo, Sarawak and Thailand.
- SOUTH AFRICA.**—
Johannesburg: Canadian Government Trade Commissioner, Mutual Building, Harrison Street, Johannesburg.
Cape Town: Canadian Government Trade Commissioner, 602 Norwich House, The Foreshore, Cape Town.
- SPAIN.**—Commercial Counsellor, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio Muni and Rio de Oro.
- SWEDEN.**—Commercial Counsellor, Canadian Embassy, Strandvagen, 7-C, Stockholm. Territory includes Finland.
- SWITZERLAND.**—Commercial Counsellor, Canadian Embassy, Kirchenfeldstrasse 88, Berne.
- UNION OF SOVIET SOCIALIST REPUBLICS.**—Commercial Counsellor, Canadian Embassy, 23 Starokonyushenny Pereulok, Moscow.
- UNITED ARAB REPUBLIC EGYPTIAN REGION.**—Commercial Counsellor, Canadian Embassy, 6 Sharia Rouston Pasha, Garden City, Cairo. Territory includes Aden, Sudan, Cyprus, Ethiopia, Saudi Arabia and Yemen.
- UNITED KINGDOM.**—
London: Minister (Commercial), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London.
Liverpool: Canadian Government Trade Commissioner, Martins Bank Building, Water Street, Liverpool.
Glasgow: Canadian Government Trade Commissioner, Cornhill House, 144 West George Street, Glasgow.
Belfast: Canadian Government Trade Commissioner, 36 Victoria Square, Belfast.
- UNITED STATES.**—
Washington: Minister-Counsellor (Economic), Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington.
New York City: Deputy Consul General (Commercial), Canadian Consulate General, 680 Fifth Ave., New York City.
Boston: Consul and Trade Commissioner, Canadian Consulate General, 532 Little Building, 80 Boylston Street, Boston.
Chicago: Consul and Trade Commissioner, Canadian Consulate General, 111 North Wabash Avenue, Chicago.
Detroit: Consul and Trade Commissioner, Canadian Consulate, 1139 Penobscot Building, Detroit.
Los Angeles: Consul and Trade Commissioner, Canadian Consulate General, 510 West Sixth Street, Los Angeles.
New Orleans: Consul and Trade Commissioner, Canadian Consulate General, 215-217 International Trade Mart, New Orleans.
San Francisco: Consul General, Canadian Consulate General, 3rd Floor, Kohl Building, 400 Montgomery Street, San Francisco.
Seattle: Consul General, Canadian Consulate General, The Tower Building, Seventh Avenue at Olive Way, Seattle.

URUGUAY.—Commercial Counsellor, Canadian Embassy, No. 1409 Avenida Agraciada, Piso 7°, Montevideo. Territory includes Paraguay and Falkland Islands.

VENEZUELA.—Commercial Counsellor, Canadian Embassy, Edificio Pan American, Avenida Urdaneta, Puente Urapal, Candelaria, Caracas. Territory includes Netherlands Antilles.

WEST INDIES.—

Port-of-Spain: Commissioner for Canada, Colonial Building, Port-of-Spain.

Kingston: Canadian Government Trade Commissioner, Barclays Bank Building, King Street, Kingston.

Section 2.—The National Energy Board

The National Energy Board was established by the National Energy Board Act 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board is responsible for the regulation in the public interest of the construction and operation of oil and gas pipelines subject to the jurisdiction of the Parliament of Canada, the tolls charged for transmission by such pipelines, the export and import of gas, the export of electric power and the construction of those lines over which such power is exported. The Board is also required to study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary or advisable in the public interest with regard to such matters. The Act also authorizes the extension of the export and import provisions to oil upon proclamation by the Governor in Council. The Board, which reports to the Minister of Trade and Commerce, consists of a Chairman, a Vice-Chairman and three other Members.

The Act was given Royal Assent on July 18, 1959, the Members were appointed by Order in Council on Aug. 10, 1959 and the Act came into force by proclamation on Nov. 2, 1959. The Act supersedes the Pipe Lines Act, formerly administered by the Board of Transport Commissioners for Canada, and the Exportation of Power and Fluids and Importation of Gas Act, formerly administered by the Standards Branch of the Department of Trade and Commerce. Provision was made in the new Act for the continuation or re-definition of authorizations issued under the two previous Acts, and in 1960 the Act was amended to extend the duration of licences to export power issued under the Exportation of Power and Fluids and Importation of Gas Act to give the National Energy Board additional time to hear applications for replacement licences.

In the interval between passage of the Act and its coming into force, the Board commenced organizing its staff and facilities, prepared its rules of practice and procedure and drafted for submission to the Governor in Council regulations relating to the export of gas and electricity. Such regulations, and the rules of practice and procedure, came into force concurrently with the proclamation of the Act on Nov. 2, 1959.

At the time of coming into force of the Act, there existed a substantial backlog of projects for the export of gas and for the construction of pipeline facilities to export such gas, which had accumulated during the period in which the Royal Commission on Energy was conducting its investigations and the subsequent period prior to the proclamation of the National Energy Board Act. Consequently, as soon as the Act was proclaimed, six applications for licences to export gas and four applications for certificates of public convenience and necessity respecting related pipeline facilities were made to the Board. At its first hearings commencing Jan. 5, 1960, the Board heard jointly these applications, namely:—

- (1) Trans-Canada Pipe Lines Limited for certificates of public convenience and necessity under Part III and for licences under Part VI of the Act;
- (2) Alberta and Southern Gas Co. Ltd., for a licence under Part VI of the Act;
- (3) Alberta Natural Gas Company for a certificate of public convenience and necessity under Part III of the Act;
- (4) Canadian-Montana Pipe Line Company for a certificate of public convenience and necessity under Part III and a licence under Part VI of the Act;
- (5) Westcoast Transmission Company Limited for a licence under Part VI of the Act; and
- (6) Niagara Gas Transmission Limited for a certificate of public convenience and necessity under Part III and a licence under Part VI of the Act.

Following its first report, issued in March 1960, the Board with the approval of the Governor in Council issued the licences and certificates referred to in items (1) to (5) and denied the application of Niagara Gas Transmission Limited. This company subsequently made a new application, which was approved following a public hearing in May. Also in May the Board heard applications for new licences in respect of previously established gas exports from Canadian-Montana Pipe Line Company and Gordon M. Plotke; these were approved in June. To Sept. 1, 1960, the only other gas export application before the Board was an application by Texaco Exploration Company to export certain quantities of butane through the Trans Mountain oil pipeline for a short period in 1960 and 1961. This application was also approved.

In considering an application for a gas export licence, the Board is required to satisfy itself that the quantity of gas to be exported does not exceed the surplus remaining after due allowance has been made for the reasonably foreseeable requirements for use in Canada having regard to the trends in the discovery of gas in Canada, and that the price to be charged by an applicant for gas exported by him is just and reasonable in relation to the public interest. Before the Board could dispose of any of these gas export licence applications, it had therefore to estimate the actual and prospective reserves of gas in Canada and the probable demand in Canada for gas, in order to arrive at an estimate of the surplus available for export. Then the Board must examine the economics of each project in detail.

In respect of oil pipelines the only application heard by the Board was that of Inter-provincial Oil Pipe Line Company for a certificate authorizing the construction of certain new pump stations and additional pumping capacity at existing stations on its pipeline. This application was heard in May and approved in June.

Under the transitional provisions of the Act, licences for the export of power issued under the Exportation of Power and Fluids and Importation of Gas Act are deemed to have been issued under the National Energy Board Act. By the amendment to the National Energy Board Act previously mentioned, such licences, which would normally have expired on Mar. 31, 1960 were extended to Dec. 31, 1961 unless replaced before that time by a licence under the new Act. In order to deal promptly with the gas export applications awaiting its attention, the Board necessarily deferred hearings on the electric power applications, which involve some 10 licensees across Canada, and is arranging hearings to deal with them at intervals from October 1960 through March 1961.

As part of the transition from the old statutes to the new, the Board is required to issue certificates of public convenience and necessity to oil and gas pipeline companies which had received from the Board of Transport Commissioners for Canada leave to construct facilities under the Pipe Lines Act. The issuance of such certificates is proceeding as the facilities built or authorized are defined in each case.

Leave of the Board is required under Sect. 76 of the Act before a pipeline under its jurisdiction can be carried across certain utilities, and is also required under Sect. 77 before a highway, private road, railway, irrigation ditch, drain, telegraph or telephone line or a line for the transmission of hydrocarbons, power or any other substance may be carried across a pipeline. To Sept. 1, 1960, the Board had issued 103 orders in respect of such crossings.

In respect of its advisory functions, the Board early in its activities made arrangements for a co-operative study of Canada's energy requirements. Under these arrangements the Dominion Coal Board undertook in close association with the Board to carry out a historical study of the uses of energy in Canada from 1945 to 1958 and to estimate the probable uses of different forms of energy in the various provinces of Canada for the years 1965, 1975 and 1985. A forecast of the use of gas was carried out by staff lent to the Board from the Department of Trade and Commerce, in co-operation with officials from the Department of Mines and Technical Surveys. Consultations on the improvement of statistics relating to energy were held with officials of the Dominion Bureau of Statistics, which will continue to be the principal source of such statistics, with the Board co-operating in and supplementing the work of the Bureau as may be agreed from time to time.

No regulatory action had been required of the Board to Sept. 1, 1960 in regard to traffic, tolls and tariffs of pipelines under its jurisdiction. The Board is continuing the preparation, commenced by the Board of Transport Commissioners for Canada, of a uniform system of accounts applicable to gas pipeline transmission companies, and the oil pipeline companies affected are continuing to apply the uniform system of accounts for such companies developed by the Board of Transport Commissioners.

Section 3.—The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments may be found.

Subsection 1.—The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates—British Preferential, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported commodities from British countries, with the exception of Hong Kong, when conveyed without trans-shipment from a port of any British country enjoying the benefits of the British Preferential Tariff into a sea, lake or river port of Canada. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries with which Canada has trade agreements. These rates would apply to British countries when they are lower than the British Preferential Tariff rates. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariff, or under all Tariffs.

Valuation.—In general, the Customs Act, as amended effective Sept. 6, 1958, provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold "(a) to purchasers located at that place with whom the vendor deals at arm's length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions". In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit at least equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty may, in no case, be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges, do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

* Information relating to rate of duty and value for duty is available from the Department of National Revenue, Customs and Excise Division, which administers the Customs Act and the Customs Tariff Act.

Dumping.—Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than the fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. ad valorem. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices.

Drawback.—There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, is provided for under the Customs Tariff Act and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

The Tariff Board.—The organization and functions of the Tariff Board are described at p. 132 of this volume.

Subsection 2.—Tariff and Trade Arrangements with Other Countries as at Feb. 15, 1960

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements are as follows: Australia, British West Indies, New Zealand, Federation of Rhodesia and Nyasaland, Union of South Africa and the United Kingdom and Colonies. Preferences are accorded by Canada to India and Pakistan. Tariff relations between Canada and Ceylon, Ghana and the Federation of Malaya are governed by the Canada-United Kingdom agreement. These agreements and arrangements have been modified and supplemented by GATT.

Canada exchanges most-favoured-nation treatment with 36 countries under the General Agreement on Tariffs and Trade. These countries are listed in the following statement. In addition, six countries participate in the work of GATT as provisional members—Cambodia, Israel, Poland, Tunisia, Switzerland and Yugoslavia. The protocol of Provisional Application of the General Agreement on Tariffs and Trade was signed by Canada on Oct. 30, 1947 and brought the Agreement provisionally into force on Jan. 1, 1948.

GATT is a multilateral trade agreement providing for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties and laying down rules and regulations to govern the conduct of international trade. Under the system of multilateral tariff negotiations initiated under GATT, four general rounds of negotiations have taken place: at Geneva, Switzerland, in 1947; at Annecy, France, in 1949; at Torquay, England, in 1950-51; and again at Geneva in 1955-56. The tariff concessions Canada granted and received at the first Geneva Conference are described in the 1948-49 Year Book, pp. 875-877, and those negotiated at Annecy are discussed in the 1950 Year Book, pp. 968-970. The Torquay negotiations are discussed in the 1952-53 edition, pp. 996-997. The existing tariff concessions remain in force until Jan. 1, 1961 and thereafter unless modified in accordance with the terms of the Agreement.

Canada already had most-favoured-nation trade agreements with a number of GATT members prior to the effective date of the General Agreement. These agreements with individual countries continue in force in conjunction with the General Agreement. As an exception, however, the Canada-U.S. Trade Agreement of 1938 is suspended for as long as both countries continue to be contracting parties to GATT.

Other arrangements include a trade agreement with the Republic of Ireland, exchanging preferences, and most-favoured-nation agreements, and other arrangements of a less formal nature, with many countries not contracting parties to GATT.

**Tariff and Trade Arrangements with Commonwealth Countries as at
Feb. 15, 1960**

Country	Agreement	Principal Terms
AUSTRALIA.....	Trade Agreement signed July 8, 1931; in force Aug. 3, 1931.* GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BRITISH WEST INDIES (BAHAMAS, BARBADOS, JAMAICA, LEEWARD AND WINDWARD ISLANDS, TRINIDAD AND TOBAGO), BERMUDA, BRITISH GUIANA, AND BRITISH HONDURAS.	Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. The British West Indies (except Jamaica), Bermuda, British Guiana and British Honduras participate in GATT.	The parties exchange specified tariff preferences. Agreement may be terminated on six months notice.
CEYLON.....	Relations continue to be governed by the Trade Agreement of 1937 between Canada and the United Kingdom. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.
GHANA.....	Relations continue to be governed by the Trade Agreement of 1937 between Canada and the United Kingdom. GATT effective Oct. 18, 1957.	Canada grants Ghana the British preferential rates, except on cocoa beans.
INDIA.....	Since 1897 Canada has unilaterally accorded British preferential treatment to India but without contractual obligation. GATT effective July 8, 1948.	In addition to preferences granted to India, most-favoured-nation treatment is exchanged under GATT.
MALAYA, FEDERATION OF...	Relations continue to be governed by the Trade Agreement of 1937 between Canada and the United Kingdom. GATT effective Oct. 24, 1957.	Canada grants Malaya British preferential rates in return for such preferences as exist in the Malayan tariff.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948.	The parties exchange specific preferences on scheduled goods and reciprocally concede British preferential rates on items not scheduled. May be terminated on six months notice.
PAKISTAN.....	Canada unilaterally accords Pakistan British preferential treatment but without contractual obligation. GATT effective July 30, 1948.	In addition to preferences granted to Pakistan, most-favoured-nation treatment is exchanged under GATT.
RHODESIA AND NYASALAND, FEDERATION OF.	Trade Agreement signed Feb. 6, 1958; in force Feb. 7, 1958. GATT effective in Southern Rhodesia May 19, 1948; extended to whole Federation, Oct. 29, 1954.	Canada exchanges preferential tariffs with the Federation.

*New agreement signed Feb. 12, 1960 to come force when ratified by both governments.

**Tariff and Trade Arrangements with Commonwealth Countries as at
Feb. 15, 1960—concluded**

Country	Agreement	Principal Terms
UNION OF SOUTH AFRICA...	Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. Exchange of notes Aug. 2-31, 1935; effective retroactive from July 1, 1935. GATT effective June 14, 1948.	Agreement includes schedules of tariff preferences granted by each country. May be terminated on six months notice. Exchange of most-favoured-nation treatment. May be terminated on six months notice.
UNITED KINGDOM.....	Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. Modified by an exchange of letters of Nov. 16, 1938, and an exchange of notes Oct. 30, 1947. GATT effective Jan. 1, 1948.	Various concessions by both countries including exchange of preferential tariff rates (some minor reservations by Canada). Extends to colonies.
WEST INDIES, FEDERATION OF THE (TRINIDAD, JAMAICA, BARBADOS, LEEWARD AND WINDWARD ISLANDS).	Trade relations continue to be governed by the Canada-British West Indies Agreement (see p. 1070).	

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Feb. 15, 1960**

Country	Agreement	Principal Terms
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941.	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice.
AUSTRIA.....	GATT effective Oct. 19, 1951.	Exchange of most-favoured-nation treatment.
BELGIUM-LUXEMBOURG....	Convention of Commerce with Belgium-Luxembourg Economic Union (including Belgian colonies) entered into effect Oct. 22, 1924. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom-Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. GATT effective July 31, 1948.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
BURMA.....	GATT effective July 29, 1948.	Exchange of most-favoured-nation treatment.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Feb. 15, 1960—continued**

Country	Agreement	Principal Terms
CAMBODIA.....	Franco-Canadian Trade Agreement of 1933 applied to Cambodia.	Since the creation of Cambodia as an independent State in 1955, Canada has continued to grant most-favoured-nation rates.
CHILE.....	Trade Agreement signed Sept. 10, 1941; provisionally in force Oct. 15, 1941, and definitively on Oct. 29, 1943. GATT effective Mar. 16, 1948.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
CHINA.....	<i>Modus vivendi</i> signed Sept. 26, 1946; in effect since Sept. 28, 1946.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
COLOMBIA.....	Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938. A Trade Agreement between Colombia and Canada was signed Feb. 20, 1946, but has not been put into force.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
COSTA RICA.....	<i>Modus vivendi</i> signed Nov. 18, 1950; brought into force Jan. 26, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CUBA.....	GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment (excluding preferences accorded by Cuba to the United States).
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. GATT effective May 21, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
DENMARK (including GREENLAND).	Treaties of Peace and Commerce with United Kingdom of Feb. 13, 1660 and July 11, 1670, apply to Canada. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment. Declaration of May 9, 1912 provides means for separate termination by Dominions on one years notice.
DOMINICAN REPUBLIC.....	Trade Agreement signed Mar. 8, 1940; in force provisionally Mar. 15, 1940, and definitively Jan. 22, 1941. GATT effective May 19, 1950.	Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on six months notice.
ECUADOR.....	<i>Modus vivendi</i> signed Nov. 10, 1950; in force Dec. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
EGYPT (REGION of UNITED ARAB REPUBLIC).	Exchange of notes Nov. 26 and Dec. 3, 1952; in force Dec. 3, 1952.	Exchange of most-favoured-nation rates. May be terminated on six months notice.
EL SALVADOR.....	Exchange of notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most-favoured-nation treatment. May be terminated on four months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Feb. 15, 1960—continued**

Country	Agreement	Principal Terms
ETHIOPIA.....	Exchange of notes effective June 3, 1955.	Exchange of most-favoured-nation treatment.
FINLAND.....	Exchange of notes of Nov. 13-17, 1948; effective Nov. 17, 1948. GATT effective May 25, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FRANCE AND FRENCH OVER-SEAS TERRITORIES.	Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of notes of Sept. 29, 1934, and additional protocol of Feb. 26, 1935. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on three months notice.
GERMANY, FEDERAL REPUBLIC OF.	GATT effective Oct. 1, 1951.	Exchange of most-favoured-nation treatment.
GREECE.....	<i>Modus vivendi</i> by exchange of notes of July 24-28, 1947; effective Aug. 28, 1947. GATT effective Mar. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
GREENLAND.....	(See Denmark).	
GUATEMALA.....	Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
GUINEA.....	As former French territory, participated in GATT.	Since creation of Guinea as an independent State in 1959, GATT members agree to continue to accord most-favoured-nation treatment for a period of two years.
HAITI.....	Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. GATT effective Jan. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
HONDURAS.....	Exchange of notes signed July 11, 1956, effective July 18, 1956. Ratified in Honduras Sept. 5, 1956.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
ICELAND.....	Although there is no contractual obligation, Canada and Iceland adhere to the terms of a treaty originally concluded between Denmark and the United Kingdom on Feb. 13, 1660.	Exchange of most-favoured-nation treatment.
INDONESIA.....	GATT effective Mar. 1, 1948.	Exchange of most-favoured-nation treatment.
IRAN.....	Special arrangement by Order in Council effective Feb. 1, 1951.	Canada grants most-favoured-nation tariff rates as long as Iran accords reciprocal treatment.
IRAQ.....	Special arrangement by Order in Council effective Sept. 15, 1951.	Canada grants and receives most-favoured-nation tariff rates.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Feb. 15, 1960—continued**

Country	Agreement	Principal Terms
IRELAND.....	Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933.	Canada grants British preferential tariff in return for preferential rates where such exist and for most-favoured-nation rates on non-preferential items. May be terminated on six months notice.
ISRAEL.....	Canada-United Kingdom Agreement of 1937 applied under the British Palestine Mandate.	Since the creation of the State of Israel in May 1948, Canada has continued to grant most-favoured-nation rates.
ITALY.....	<i>Modus vivendi</i> by exchange of notes of Apr. 23-28, 1948; effective Apr. 28, 1948. GATT effective Jan. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
JAPAN.....	Agreement on Commerce signed Mar. 31, 1954; effective June 7, 1954. GATT effective Sept. 10, 1955.	Exchange of most-favoured-nation treatment. Remains in force for one year from ratification and thereafter unless terminated on three months notice.
LAOS.....	Franco-Canadian Trade Agreement of 1933 applied to Laos.	Since the creation of Laos as an independent State in 1955, Canada had continued to grant most-favoured-nation rates.
LEBANON.....	Special arrangement by Order in Council of Nov. 19, 1946.	Canada grants most-favoured-nation tariff rates as long as Lebanon accords reciprocal treatment.
LIBERIA.....	Special arrangement by Order in Council of June 3, 1955.	Canada grants most-favoured-nation tariff rates as long as Liberia accords reciprocal treatment.
LIECHTENSTEIN.....	(See Switzerland)	
LUXEMBOURG.....	(See Belgium)	
MEXICO.....	Trade Agreement signed Feb. 8, 1946; in force provisionally same date. Ratifications exchanged on May 6, 1947; definitively in force 30 days from that date.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
MOROCCO.....	Various agreements applied to French, Spanish and International Zones of Morocco.	Since the creation of Morocco as an independent State in 1956, Canada has continued to grant most-favoured-nation rates.
NETHERLANDS.....	Convention of Commerce of July 11, 1924. Suspended during war; reinstated by exchange of notes Feb. 1 and 5, 1946. Includes Netherlands Antilles and Surinam. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one year's notice.
NICARAGUA.....	Trade Agreement signed Dec. 19, 1946; in force provisionally same date. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Feb. 15, 1960—continued**

Country	Agreement	Principal Terms
NORWAY.....	Convention of Commerce and Navigation with United Kingdom of Mar. 18, 1826, applied to Canada. GATT effective July 10, 1948.	Exchange of most-favoured-nation treatment. Convention of May 16, 1913 provides means for separate termination by Dominions on one years notice.
PANAMA.....	Order in Council of July 20, 1935, accepted Article 12 of United Kingdom—Panama Treaty of Commerce of Sept. 25, 1928. Treaty terminated in 1942.	While contractual obligation has expired, Canada and Panama continue to exchange most-favoured-nation treatment.
PARAGUAY.....	Exchange of notes of May 21, 1940, in force June 21, 1940.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
PERU.....	GATT effective Oct. 8, 1951.	Exchange of most-favoured-nation treatment.
PHILIPPINES.....	No agreement at present.	Canada and Philippines, without contractual obligation, exchange most-favoured-nation treatment (excluding preferences accorded by the Philippines to the United States).
POLAND.....	Convention of Commerce signed July 3, 1935, in force Aug. 15, 1936.	Exchange of most-favoured-nation treatment including scheduled reductions. May be terminated on three months notice.
PORTUGAL, PORTUGUESE ADJACENT ISLANDS AND PORTUGUESE OVERSEAS PROVINCES.	Trade Agreement signed May 28, 1954, provisionally in effect July 1, 1954, definitively in force on ratification Apr. 29, 1955.	Exchange of most-favoured-nation treatment. Remains in effect for two years from ratification and thereafter unless terminated on three months notice.
SPAIN AND SPANISH POSSESSIONS.	Since Aug. 1, 1928, Canada has adhered to the United Kingdom-Spain Treaty of Commerce of Oct. 31, 1922. Trade Agreement signed May 26, 1954, provisionally in effect July 1, 1954, definitively in force on ratification June 30, 1955.	Exchange of most-favoured-nation treatment. May be terminated on six months notice. Supplements and amends United Kingdom-Spanish Treaty of Commerce. Remains in effect for three years from ratification, and thereafter unless terminated on three months notice.
SWEDEN.....	United Kingdom - Sweden Convention of Commerce and Navigation of Mar. 18, 1826, applies to Canada. GATT effective May 1, 1950.	Exchange of most-favoured-nation treatment. Declaration of Nov. 27, 1911 provides means for separate termination by Dominions on one years notice.
SWITZERLAND.....	United Kingdom - Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855, applies to Canada. By exchange of notes Liechtenstein included under terms of this Agreement, effective Aug. 2, 1947.	Exchange of most-favoured-nation treatment. Convention of Mar. 30, 1914, provides means for separate termination by the Dominions on one years notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Feb. 15, 1960—concluded**

Country	Agreement	Principal Terms
SYRIA (REGION OF UNITED ARAB REPUBLIC).	Special Arrangement by Order in Council of Nov. 19, 1946.	Canada grants most-favoured-nation tariff rates as long as Syria accords reciprocal treatment.
TUNISIA.....	Franco-Canadian Trade Agreement of 1933 applied to Tunisia (Tunisia is in customs union with France).	Since the creation of Tunisia as an independent State in 1956, Canada has continued to grant most-favoured-nation rates.
TURKEY.....	Exchange of notes signed Mar. 1, 1948; in effect Mar. 15, 1948. GATT effective Oct. 17, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
UNION OF SOVIET SOCIALIST REPUBLICS.	Trade Agreement signed Feb. 29, 1956. Ratifications exchanged May 26, 1956.	Exchange of most-favoured-nation treatment and undertaking by U.S.S.R. to purchase determined quantity of Canadian wheat. In force for three years from date of signature and may thereafter be extended by mutual agreement. (Expired Feb. 28, 1959, but most-favoured-nation treatment continues to be exchanged.)
UNITED ARAB REPUBLIC...	(See Egypt and Syria)	
UNITED STATES.....	Trade Agreement signed Nov. 17, 1938; suspended as long as both countries continue to be contracting parties to GATT. GATT effective Jan. 1, 1948.	Most-favoured-nation treatment exchanged under 1938 Agreement is continued under GATT.
URUGUAY.....	Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. Additional Protocol signed Oct. 19, 1953. GATT effective Dec. 16, 1953.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
VIET NAM.....	Franco-Canadian Trade Agreement of 1933 applied to Viet Nam.	Since the creation of Viet Nam as an independent State, Canada has continued to accord most-favoured-nation rates.
VENEZUELA.....	<i>Modus vivendi</i> signed and brought into force Oct. 11, 1950.	Exchange of most-favoured-nation treatment. Made for one year subject to annual renewal.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of United Kingdom-Serb-Croat-Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.

Subsection 4. Subsidies and Taxation Agreements with the Provinces.....	1098	Subsection 2. Municipal Revenue, Expenditure and Debt.....	1107

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Combined Statistics of Public Finance for All Governments

Combined statistics of public finance for all governments in Canada—federal, provincial and municipal—are presented in this Section. More detailed information for each level of government is given in Sections 2, 3 and 4.

Combined Revenue and Expenditure.—Tables 1 and 2 give details of the federal, provincial and municipal net combined revenue by source and net combined current and capital expenditure by function, respectively, for 1956 and 1957. This net basis has been prepared by deducting from revenue, and the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-government transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 2 in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-government transfers in the two tables.

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

1.—Combined Revenue of All Governments, 1956 and 1957

¹ Includes treasury bills having a term of two or more years.² Includes treasury bills having a term of less than two years.³ Excludes contingent liability in respect of Federal Government guarantee of deposits maintained by chartered banks in the Bank of Canada and miscellaneous guarantees the amounts of which were not finally determined or were indeterminate at the close of the fiscal year.

Section 2.—Federal Public Finance

Subsection 1 of this Section contains tables dealing with statistics of the Federal Government prepared as far as possible, in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the *Public Accounts*. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The *Public Accounts* presentation is retained for continuity, and also because there is interest in and use for information on this basis.

Historical Data.—A sketch of public finance from the French régime to the outbreak of World War I appears in the 1941 Year Book, pp. 742-743. Detailed sketches *re* tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945, is given in the 1945 Year Book, pp. 918-923. The postwar financial policy of the Government of Canada is outlined in the 1954 Year Book at pp. 1061-1064, and tax changes proposed in subsequent Budgets are outlined briefly in the 1955, 1956, 1957-58 and 1959 Year Books.

The 1959-60 Budget.—The Budget presented Apr. 9, 1959 to the second session of the 24th Parliament announced several changes in tax rates. On taxable income of individuals in excess of \$3,000 the existing rates were increased by 2 percentage points. The old age security taxes were each increased from 2 p.c. to 3 p.c. These taxes now consist of a tax of 3 p.c. (maximum \$90) on personal incomes, a tax of 3 p.c. on corporate incomes and a tax of 3 p.c. on sales. The increased rates apply to corporation income from Jan. 1, 1959, to personal income from July 1, 1959, and to sales from Apr. 10, 1959. The personal income tax schedule for 1959 is a composite of the new rates and those in effect prior to July 1, 1959; the new rates are applicable to the whole of 1960. On taxable income of corporations, effective from Jan. 1, 1959, the rates on amounts in excess of \$25,000 were increased from 45 p.c. plus 2 p.c. old age security tax, to 47 p.c. plus 3 p.c. old age security tax. Amendments to the Excise Tax Act and the Excise Act provided for increases in the tax on cigarettes and in the duties on spirits and cigars, respectively.

The 1960-61 Budget.—This Budget was presented to the third session of the 24th Parliament on Mar. 31, 1960. The Minister of Finance introduced no major tax changes. However, certain amendments of a technical nature were proposed which represented significant improvements in the fairness of the tax structure but did not affect over-all revenue collections.

Subsection 1.—DBS Statistics of Federal Public Finance

Revenue and Expenditure.—Table 4 shows details of net general revenue of the Federal Government for the years ended Mar. 31, 1957 and 1958.

Guaranteed Debt.—In addition to the direct debt of the Federal Government already dealt with, there are large indirect obligations such as those arising out of the guarantee of securities issued by the Canadian National Railways. In addition, guarantees of certain bank loans have been made under the various Relief Acts, the National Housing Act, the Farm Improvement Loans Act, and the Veterans Business and Professional Loans Act. When the Bank of Canada commenced business on Mar. 11, 1935, the guarantee of the deposit required to be maintained in the Bank of Canada by every chartered bank

came into force. This guarantee must be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities and/or if the Bank suspends payment of any of its liabilities".

¹ These contingent liabilities are expressed in Canadian dollars; where applicable, stocks and bonds payable solely in sterling or United States dollars are converted on the basis of £1=\$2.80 and \$1 U.S.=.35 Canadian, respectively. In addition the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1958 amounted to approximately \$15,000,000. Against this amount was a reserve of \$2,460,227.

² As at Dec. 31, 1958. ³ As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders for their respective fiscal years ended between Oct. 31 and Dec. 31, 1958.

A brief commentary dealing with the national debt of the Government of Canada from 1914 appears at p. 1091 of the 1954 Year Book. The following table summarizes the debt position during the period 1950-59 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and information on new security issues of

the Federal Government may be found in the *Public Accounts*. They are summarized by standard classification in DBS publication *Financial Statistics of the Government of Canada* (Catalogue No. 68-210).

¹ Based on the official estimates of population for June 1 of the year indicated (see p. 196).

² Based on

the official estimates of population for June 1 of the year immediately preceding the one indicated (see p. 196).

³ Excludes \$87,510,068 adjustment required to place interest on public debt on accrued basis.

Subsection 3.—Analysis of Revenue from Taxation

The following analysis of taxation revenue is confined to excise duties, excise taxes, income tax and succession duties; customs receipts constitute a single item in the *Public Accounts* and are not analysed here.

Excise Duties

Excise duties proper are presented below with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of goods taken out of bond and subject to excise tax.

Canadian Excise Tariff.—The following is a statement of the Canadian excise tariff as at Dec. 31, 1959:—

Spirits.....	per proof gal.	\$13.00	Spirits used directly in the manufacture of toilet preparations or cosmetics on which excise tax is applicable under Schedule I of the Excise Tax Act.....	per proof gal.	Free
Spirits used by licensed bonded manufacturers.....	per proof gal.	1.50	Canadian brandy.....	per proof gal.	\$11.00
Spirits used in bond for manufacture of perfume.....	per proof gal.	Free	Malt, all, when brought into a brewery.....	per lb.	Free
Spirits used in bond for manufacture of approved chemical compositions.....	per proof gal.	0.15	Beer, all.....	per Imp. gal.	0.38
Spirits sold to druggists licensed under the Excise Act to be used exclusively in preparation of prescriptions for medicines and pharmaceutical preparations....	per proof gal.	1.50	Tobacco, manufactured, all descriptions except cigarettes.....	per lb.	0.35
Spirits distilled from wine produced from native fruits, and used in any bonded manufactory for the treatment of domestic wine.....	per proof gal.	Free	Cigarettes, weighing not more than two and one-half pounds... per M		4.00
Spirits imported and taken into a bonded manufactory (in addition to duties otherwise imposed).....	per proof gal.	0.30	Cigarettes, weighing more than two and one-half pounds..... per M		5.00
			Cigars, all.....	per M	2.00
			Canadian raw leaf tobacco, when sold for consumption.....	per lb.	0.10

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

14.—Gross Excise Duties Collected, Years Ended Mar. 31, 1955-59

Income Tax

Income Tax Collections by the Department of National Revenue on a Fiscal-Year Basis.—Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and, as a single cheque from one employer may frequently cover the tax payments of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 17 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

17.—Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1951-60

NOTE.—Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000; for 1935-48 in the 1951 Year Book, p. 994; and for 1949-50 in the 1959 edition, p. 1066.

Corporation Income Tax Statistics.—Corporation statistics presented in Tables 21 and 22 are on a taxation-year basis prior to assessment. The data were extracted and compiled from the returns shortly after they were filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec because many large corporations operating across Canada file their returns in one or other of these two provinces.

Succession Duties

A history of succession duties in Canada, together with examples of the occurrences of federal duty on typical estates and of combined federal and provincial duties on typical estates, is given in the 1956 Year Book, pp. 1064-1068.

Since 1947, only Ontario and Quebec among the provinces have been levying succession duties, the other provinces having leased this field to the Federal Government under terms of the 1947, 1952 and 1957 tax rental agreements (see p. 1098); a tax abatement of 50 p.c. of the federal estate tax otherwise payable is granted in respect of property situated in a province which does not "rent" its succession duties to the Federal Government.

An outline of the Estate Tax Act passed by Parliament in 1958 is given in the 1959 Year Book, pp. 1070-1071. The Act was amended in 1960 with respect to charitable donations, life insurance and annuities.

Table 24 shows the receipts of the various governments from succession duties for the years ended Mar. 31, 1956-59.

24.—Federal and Provincial Revenue from Succession Duties, Years Ended Mar. 31, 1956-59

NOTE.—Statistics for 1948-52 are given in the 1954 Year Book, p. 1080; for 1953-54 in the 1956 edition, p. 1064; and for 1955 in the 1959 edition, p. 1071.

1 Under terms of the 1947, 1952 and 1957 Dominion-Provincial Taxation Agreements all provinces except Ontario and Quebec refrain from levying succession duties; amounts shown for other provinces are arrears. Provincial figures for 1959 are preliminary.

Subsection 4.—Subsidies and Taxation Agreements with the Provinces

Subsidies.—A brief history of certain annual payments made by the Federal Government to the provinces under the provisions of the British North America Act and subsequent arrangements entered into from time to time appears in the 1956 Year Book, pp. 1068-1069. All payments made by the Federal Government to the provinces during the year ended Mar. 31, 1958 are shown in detail in Table 6, on p. 1083.

Taxation Agreements.—Early in World War II, in order to provide revenue for heavy national expenditures and at the same time control inflationary tendencies, the provincial governments vacated the income and corporation tax fields in favour of the Federal Government for the duration of the War and a limited period thereafter, in return for a tax rental payment from the Federal Government. The Agreements of 1942 were succeeded in turn by the Agreements of 1947 and the Tax Rental Agreements of 1952. Under the 1952 Agreements, all provinces except Ontario and Quebec agreed to lease their personal and corporation income taxes, special corporation taxes and succession duties to the Government of Canada in exchange for a rental payment. Ontario, which had not entered into the 1947 Agreements, also agreed to lease personal and corporation income taxes and special corporation taxes but retained the right to levy succession duties. In 1952 the nine provinces received \$303,000,000 in tax rental payments compared with \$96,000,000 received by the eight provinces in 1951.

The Wartime Tax Agreements of 1942 are outlined in the 1946 Year Book, pp. 900-901. The 1947 and 1952 Tax Rental Agreements are outlined at pp. 1087-1090 of the 1954 edition.

With the 1952 Rental Agreements expiring at Mar. 31, 1957, conferences were held with the provinces in April and October 1955 and March 1956 to discuss new financial arrangements. At the October meeting the Federal Government put forward certain suggestions for discussion. These were revised and became part of the actual proposals made by letter on Jan. 6, 1956. Some further revisions in detail were made following a meeting with the provinces on Mar. 9, 1956, and the final proposals were incorporated in a Bill presented to Parliament in July 1956, entitled the Federal-Provincial Tax-Sharing Arrangements Act. This Act received Royal Assent on July 31, 1956.

The current fiscal arrangements differ substantially in principle from those in effect before Apr. 1, 1957. Provision is still made for tax rental agreements in the fields of individual and corporation income tax and succession duties, but the tax rental payment to a province is now the estimated yield at certain agreed or "standard" rates of the taxes rented by that province to the Federal Government. The fiscal aid components of the payments which were formerly contained in the total tax rental payment under the 1952-57

agreements are now dealt with separately by means of "tax equalization payments". These tax equalization payments are so calculated that, when added to the tax rental payments, they raise the total per capita return in each province to the average per capita return of standard taxes in the two provinces that have the highest per capita yield of standard taxes.

The standard taxes are: (a) individual income tax at 10 p.c. of the federal tax (raised to 13 p.c. for 1958-59 and 1959-60); (b) corporation income tax at 9 p.c. of corporation taxable income; and (c) succession duties at 50 p.c. of the federal duties averaged over a three-year period.

In addition, provincial revenue stabilization payments are provided which will support the payments to a province at a level determined by the greatest of: (a) the adjusted 1957 tax rental payment, which is the amount payable in 1956-57 to any province whether under an agreement or not, adjusted for any population changes in the year in question; (b) the projected tax rental payment, which is the amount that would be payable to any province in a year if the 1952 Tax Rental Agreements were to be extended into the year in question; and (c) the basic stabilization amount, which for 1958-59 was 95 p.c. of the amount of tax equalization payments, provincial revenue stabilization payments and current tax rental payments applicable to the province in 1957-58; and, for subsequent years, 95 p.c. of the average of such payments in the two previous years.

The tax equalization payments and the provincial revenue stabilization payments are payable to a province regardless of any action they may take in these tax fields. Tax rental payments are subject to agreement.

Rental agreements covering all three tax fields have been entered into with all provinces except Quebec and Ontario. Ontario has rented the individual income tax to the Federal Government but levies its own corporation income and corporation taxes and succession duties. Quebec continues to levy all three taxes. Where a province levies its own taxes, there is a reduction of federal tax provided at the standard rate noted above.

Following a Dominion-Provincial Conference in November 1957, the Federal Government increased the standard individual income tax from 10 p.c. to 13 p.c. This was done on an interim basis for the fiscal year commencing Apr. 1, 1958 only. However, the higher rate was subsequently extended for one additional year and a further measure was introduced in the House of Commons on Apr. 1, 1960 to extend the rate for another two years ending with the expiry of the current Tax-Sharing Arrangements on Mar. 31, 1962.

The proposed amendments to the Federal-Provincial Tax-Sharing Arrangements Act, introduced on Apr. 1, 1960, also provide alternative arrangements for payment of federal grants to institutions of higher learning to be effective for two years ending Mar. 31, 1962. These grants, paid either under the authority of the Federal-Provincial Tax-Sharing Arrangements Act through the Canadian Universities Foundation or, under certain circumstances, when a province so desires, directly by that province. Where a province that does not rent its corporation taxes to the Federal Government chooses to pay the university grants directly, its corporate taxpayers will receive an abatement from the federal income tax of 10 p.c. instead of 9 p.c. Where the loss of revenue to the federal treasury by reason of the 1-p.c. increase in abatement exceeds the cost of university grants of \$1.50 per capita in the province concerned, a deduction equivalent to this excess will be made by the Federal Government from other payments made to the province under the Federal-Provincial Tax-Sharing Arrangements Act. On the other hand, if the cost of such increased abatement of 1 p.c. in the corporation tax rate should be less than university grants of \$1.50 per capita, the Federal Government will pay the difference to the provincial government for the benefit of the universities.

The Federal-Provincial Tax-Sharing Arrangements Act was amended in 1958 to provide for special grants, known as the Atlantic Provinces Adjustment Grants, to be paid to the four Atlantic Provinces for (each of the) four years commencing Apr. 1, 1958, and totalling \$25,000,000 annually divided as follows: Nova Scotia, New Brunswick and Newfoundland each \$7,500,000, and Prince Edward Island \$2,500,000.

Additional Grants to Newfoundland.—The Newfoundland Additional Grants Act of 1959 provides for the following grants to be paid to the Province of Newfoundland: for the fiscal year (ended Mar. 31) 1957-58, \$6,600,000; 1958-59, \$6,950,000; 1959-60, \$7,300,000; 1960-61, \$7,650,000; 1961-62, \$8,000,000. These payments are made following the recommendations of a Royal Commission appointed pursuant to the Terms of Union of Newfoundland with Canada. The Commission's report, dated May 31, 1958, deals with "the form and scale of additional financial assistance, if any, that might be required by the Government of the Province of Newfoundland to enable it to continue public services at the levels and standards reached subsequent to the date of the Union, without resorting to taxation more burdensome, having regard to capacity to pay, than that obtaining generally in the region comprising the Maritime Provinces of Nova Scotia, New Brunswick, and Prince Edward Island".

Section 3.—Provincial Public Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the *Public Accounts* figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section.

Fiscal periods are as nearly coincident as possible in view of the variations in provincial fiscal year-ends prior to the 1951 fiscal year; as of 1952 the fiscal years of all provinces end on Mar. 31. Figures for Newfoundland are included from 1949, for Yukon Territory from 1950, and for the Northwest Territories from 1955.

Subsection 1.—Revenue and Expenditure of Provincial Governments

Table 25 shows net revenue and expenditure of provincial governments for the years ended Mar. 31, 1952-58, and Tables 26 and 27 give details of such revenue and expenditure for the fiscal years ended in 1957 and 1958. "Net general revenue" and "net general expenditure" are arrived at by first analysing the combined revenues and expenditures of capital account, current or ordinary account and those working capital funds and special funds for which separate accounts are kept. Then the following types of revenue are deducted from revenue and offset against related expenditure: interest, premium, discount and exchange; institutional revenue; grants-in-aid and shared-cost contributions from other governments; and capital revenue. Table 28 gives details of the amounts paid to other governments by provincial governments, according to nature of payment.

¹ N.S.—Crown land leases; Ont.—municipal share of liquor licences; Alta.—share of gasoline tax \$9,990,000, and share of liquor fines \$150,000.
² Excludes grants in lieu of taxes paid by provincial government enterprises.
³ Reimbursement of taxes newly incorporated or extended municipalities.
⁴ Excludes amounts paid directly to municipal hospital boards.
⁵ Includes grants paid directly to 60 teachers' P.E.I., N.B. and Que.
⁶ Excludes \$4,731,000 expenditures by the province to meet debt charges on various denominational basis; grants to denominational schools operated by the territorial government and by religious denominations.
⁷ Excludes \$4,731,000 expenditures by the province to meet debt charges on various denominational basis; grants to denominational schools operated by the territorial government and by religious denominations.
⁸ Excludes \$4,731,000 expenditures by the province to meet debt charges on various denominational basis; grants to denominational schools operated by the territorial government and by religious denominations.
⁹ Emergency flood relief.

Subsection 2.—Debt of Provincial Governments

Table 29 shows total bonded debt, by province, as at Mar. 31, 1954-59. Table 30 shows that the majority of bond issues are payable in Canada, but that the portion payable in New York only increased from 19 p.c. in 1957 and 1958 to nearly 23 p.c. in 1959. Table 31 provides details of total direct and indirect debt of provincial governments as at Mar. 31, 1959.

29.—Gross Bonded Debt (exclusive of Treasury Bills) of Provincial Governments, as at Mar. 31, 1954-59

¹ Includes \$50,000 bonds issued by the Provincial Sanatorium Commission.² Includes bonds assumed: Ont. \$900,000.³ Having a term of more than two years.⁴ Includes trust deposits not separable from personal savings deposits.⁵ Includes \$79,106,000 net liability of the province re Province of Ontario Savings Office.⁶ Based on estimated population as at June 1, 1958 (see p. 196).⁷ Deposits in the Newfoundland Savings Bank.

Section 4.—Municipal Public Finance

Subsection 1.—Municipal Assessed Valuations and Taxation

Table 32 shows municipal assessed valuations and total exemptions, by province, for the year 1957 together with local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Assessment figures in the various provinces are not entirely comparable as there are still variations in methods, schedules and rates, not only between provinces but also between municipalities within the same province.

¹ City of St. John's only. ² Includes: N.S.—household tax, Halifax; N.B.—occupancy tax, Fredericton, and rentals tax, Moncton; Sask.—special franchise. ³ Total of valuations assessed but exempt from taxation; excludes exempt property not assessed. ⁴ Incomplete. ⁵ Excludes permissive exemptions. ⁶ City of Dawson only. ⁷ Yellowknife only. ⁸ Excludes rural municipalities. ⁹ Excludes partial statutory and permissive exemptions.

Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 32 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan municipalities are required to levy certain taxes for and on behalf of the provincial government and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes excluded in the Saskatchewan municipal levies in Table 32 are as follows:—

Subsection 2.—Municipal Revenue, Expenditure and Debt

Tables 33, 34 and 35 show comparative totals and details of gross ordinary revenue and expenditure of municipal governments, by province. Table 36 sets out the direct and indirect debt of local governments for the year 1957. The amounts shown include debt incurred for general and school purposes, debenture debt incurred for and by utilities, and debenture debt incurred by certain special areas organized to provide specific local services.

CHAPTER XXIII.—NATIONAL ACCOUNTS AND CANADA'S INTERNATIONAL INVESTMENT POSITION

CONSPECTUS

	PAGE		PAGE
SECTION 1. NATIONAL ACCOUNTS.....	1111	SECTION 2. CANADA'S INTERNATIONAL INVESTMENT POSITION.....	1120

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—National Accounts*

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 3 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. For all other tables the data are expressed in current dollars so that year-to-year changes must be considered in relation to price changes over the period.

National accounts calculated on a quarterly basis are a logical extension of the annual national accounts and have been published since 1953. However, their preparation on a reliable and analytically useful basis is rather more difficult because of the scarcity of quarterly data, special problems arising from the measurement of farm production and problems in connection with seasonal variation.

The tables in this Section cover the more important aspects of the national income analysis in annual terms. Tables 1 and 2 show the main aggregates of national income, gross national product, gross national expenditure and their components; other tables are included to show the source and disposition of personal income, government revenue and expenditure and personal expenditure on consumer goods and services.

National Income.—Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

* Prepared in the Research and Development Division, Dominion Bureau of Statistics.

Gross National Product.—Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

Personal Income.—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.—Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Economic Activity in 1959.—In 1958 the Canadian economy began to recover from a mild recession. Recovery continued in 1959, lifting the economy to new high levels in the first half of the year. Expansion was checked in the third quarter, largely as a result of industrial disputes in Canada and in the United States, but was resumed in the fourth. For the year as a whole the gross national product was \$34,593,000,000, about 6 p.c. higher than in 1958. With final product prices higher by about 2 p.c. the physical volume of output was estimated to be about 4 p.c. above that of the preceding year, compared with no change in the two preceding years and a postwar average increase of 4 p.c. per year.

Renewed stock-building and a reversal in the downward trend in outlays for plant and equipment provided much of the stimulus to the increase in activity. After heavy liquidation in 1958, business inventories moved to a position of modest accumulation in 1959. The shift amounted to about \$700,000, additional demand for current production. While business investment in plant and equipment was unchanged for the year as a whole, some quickening in activity in this sector became apparent during the course of the year in contrast to a moderating tendency in 1958. On the other hand, outlays for new housing, which had risen sharply in 1958, receded in the first three quarters of 1959 but recovering a little in the fourth when new mortgage money made available by the Federal Government was taken up; for the year as a whole investment in housing was slightly lower than in 1958.

The personal and the government sectors continued to contribute to the advance in output. Consumer expenditure rose nearly 6 p.c., a somewhat greater rate of increase than in the previous year. Since prices in the consumer sector rose more moderately, the gain in real consumption was more pronounced than in 1958. The increase in government expenditure on goods and services was 5 p.c. compared with one of 7 p.c. in 1958.

Recovery in Canada caused a widening of the gap on external transactions, despite an improvement in international markets for Canada's export products. After having remained unchanged for two years, exports of goods and services rose by 5 p.c. in 1959, most of the gain being concentrated in the second half of the year. Imports of goods and services, which had fallen very sharply during the recession, began to rise in the latter part of 1958 and for 1959 as a whole were 9 p.c. higher than in the preceding year. The deficit on current international account, surpassing its previous peak in 1957, rose to \$1,400,000,000 from \$1,000,000,000 in 1958.

The progress of recovery was reflected in the flow of income to the personal, business and government sectors and in the composition of important income aggregates. Personal income rose about 6 p.c., paralleling the rise in national income and matching the gain

of the previous year. Labour income rose nearly 8 p.c. reflecting the improvement in the employment situation and the continued advance in average earnings. Transfer payments rose 5 p.c., in contrast to an increase of 27 p.c. in 1958 when legislative changes in social security and higher unemployment had swollen the flow of such payments. The quickening in activity raised corporate profits 14 p.c. in contrast to a moderate decline in the preceding year. Likewise, tax revenues collected by or accruing to the Federal Government reflected expansionary influences and the government deficit was sharply reduced.

Production, Employment and Prices.—Most major industry divisions contributed to the rise in the physical volume of output in 1959. The sharpest increases were in forestry, mining and public utilities. The almost uniformly upward trend of production in 1959 was in strong contrast to the mixed and largely offsetting movements that characterized output in the previous year. A large part of the increase from 1958 levels came in the first half of 1959; the rate of increase dropped in the second half, partly as a result of industrial disputes in Canada and the delayed effects of the steel strike in the United States.

Among the primary industries, an increase of about 9 p.c. in forestry production was entirely attributable to pulpwood; output of other forest products was fractionally lower. The improvement in markets for some traditional metals and fuels and the continued expansion of output of new resource industries brought about a more than 10-p.c. increase in mining production as a whole and relatively large gains in the output of several important products; among these were nickel, copper, crude petroleum, uranium, and natural gas. Output of coal continued to decline as did that of lead and zinc. The underlying trend of mining production was strongly upward throughout the year and by December the index was nearly 15 p.c. higher than a year earlier.

The output of manufacturing industries was about 7 p.c. higher in 1959 than in 1958—durables rising about 8 p.c. and non-durables about 6 p.c. All the major divisions of manufacturing increased their production with the single exception of transportation equipment. Production in this industry was off slightly, partly as a result of the steep drop in activity in aircraft and parts. The largest increases in output were in iron and steel products, rubber products, textiles, products of petroleum and coal, and non-metallic mineral products.

The rising trend of manufacturing production in 1959 was interrupted in the third quarter, when the prolonged industrial dispute in the woods industry in British Columbia affected production of durable goods. In the closing quarter the rise in manufacturing production was restrained by November lay-offs in the automotive industry as a result of shortages of steel among United States suppliers. Nevertheless, production advanced 2 p.c. in the final quarter of the year, after allowing for seasonal factors. By the end of the year the index of manufacturing output was 6 p.c. above its level a year earlier. Non-durable manufacturing was running 4 p.c. above its previous peak reached in 1957, but durable manufacturing production was still 3 p.c. below the peak reached in July 1956.

The relatively large advance in the output of public utilities during 1958 which amounted to 14 p.c. was mainly the result of a great increase in the distribution of natural gas to final users; distribution by electric power utilities was up less than 10 p.c. The volume of construction is estimated to have been 3 p.c. lower in 1959 than in 1958. The increase in the volume of public construction did not fully offset the decline in private construction. All the service-producing industries shared in the 4.5 p.c. advance in output for the group as a whole. A 6-p.c. gain in volume in transportation, communication and storage contrasted with a 4-p.c. decline in 1958. Railway car loadings were only slightly higher but most other forms of transport handled a decidedly larger volume of business—notably shipping, air transport and oil pipelines.

These gains in production were accompanied by an increase in total employment in 1959. The number of persons with jobs was close to 3 p.c. higher than in 1958; the number with jobs in the non-farm sector was 3.5 p.c. higher. Much the greatest increase in employment took place in the service industries. Employment in the goods-producing industries rose only moderately, despite the relatively large increase in output in this sector. For example, in manufacturing a 7.0-p.c. gain in output between 1958 and 1959 was achieved

with a 1.2-p.c. increase in numbers employed. The growth in employment opportunities in 1959 reduced the number of persons without jobs and seeking work from 6.6 to 5.6 p.c. of the labour force.

Final product prices continued to move slightly upward during 1959, the advance being about the same as that which occurred during the previous year. Prices in the consumer sector rose considerably less than in the earlier year but prices of capital goods and exports rose more; prices of imports declined, reflecting for the most part a higher rate of exchange on the Canadian dollar.

Components of Gross National Expenditure.—Personal expenditure on consumer goods and services was 6 p.c. higher in 1959 than in the preceding year. The increase in spending matched fairly closely the advance in personal income, leaving a rate of personal saving that continued to be high by the standards of most postwar years. The upward trend of consumer prices moderated so that the greater part of the increased spending represented a gain in real consumption which, on a per capita basis, showed the first increase since 1956. The advance in personal spending was well distributed over the three main categories, with increases of 5 p.c. in non-durables, of more than 6 p.c. in durables and almost 7 p.c. in services. While most of the durable items showed increases, the major part of the gain was in purchases of new and used automobiles. A 45-p.c. increase in sales of British and European models, which represented 18 p.c. of all new car sales, was a notable development of the year. The rise in purchases of durable goods was accompanied by a sharp advance in consumer credit outstanding.

Government expenditure on goods and services rose to \$6,400,000,000, about 5 p.c.* higher than in 1958. All this advance was attributable to provincial and municipal governments; it reflected increased wages and salaries and larger expenditures of a capital nature. Federal Government expenditures were down slightly, reflecting a decline in outlays for defence of about 6 p.c., which was largely offset by increased spending for other purposes.

The accumulation of business inventories in 1959 amounted to \$355,000,000, in contrast to liquidation of \$323,000,000 in 1958. This shift of nearly \$700,000,000 was an important element in economic recovery and accounted for almost one-third of the increase in gross national product. Manufacturers, wholesalers and retailers all built up stocks in 1959, after having drawn them down the previous year. However, the building up of stocks did not keep pace with the growth in manufacturers' shipments or wholesalers' sales, leaving stocks shipments and stocks sales ratios lower than they had been a year earlier.

While expenditures on construction remained stable in aggregate between 1958 and 1959, the components changed significantly. Expenditures on non-residential construction dropped nearly 8 p.c. This decline, which was largely concentrated in engineering works, reflected the completion of certain large projects, such as pipelines, electric power installations and the St. Lawrence Seaway, reinforced by a fall in outlays for construction by manufacturing industries. On the other hand, outlays for machinery and equipment advanced 9 p.c. This upsurge in spending was supported by a roughly corresponding increase in both imports and domestic shipments of machinery and equipment. Business outlays for plant and equipment, though unchanged for the year as a whole, reversed their two-year downward trend early in 1959, thereby providing an important stimulus to the expansion in economic activity.

Expenditures for new housing, which had been at an unprecedentedly high level in 1958, receded a little in 1959. New housing units started fell sharply but completions remained about the same. The trend of housing was associated with the limited supply of mortgage funds from private lenders who were faced with pressing demands for credit for other purposes. In the closing quarter of the year, Federal Government mortgage lending was made available to builders and outlays for housing rose slightly.

In a situation of vigorous recovery in the United States and expanding activity in other industrialized countries, exports of goods and services rose 5 p.c. in 1959, after having remained virtually unchanged in the two preceding years. Among merchandise exports, the products of the leading primary industries were prominent in raising the total.

Thus exports of forest products, metals and minerals were up over 10 p.c. Exports of iron and its products showed the largest relative gain of all the main commodity groups, rising by almost one-third, in contrast to a decline of about one-sixth in 1958. This unusually large increase was related to the strike-induced shortage of steel in the United States. Among other products showing relatively large gains were lumber, pulp and paper, uranium and some other non-ferrous metals. These gains were partially offset by lower sales of some agricultural products, including grains and cattle; and of some manufactured products, including aircraft and ships, sales having been extraordinary high in the previous year. So far as invisible items are concerned, receipts from the tourist trade, from freight and shipping, from miscellaneous services and in the form of interest and dividends were all higher in 1959 than in 1958. On the other hand, gold production available for export was lower. Receipts from services totalled \$1,500,000,000, compared with \$1,400,000,000 the previous year.

As is characteristic of periods of rising economic activity, imports of goods and services advanced sharply in 1959, and were 9.5 p.c. higher than in 1958. Payments for merchandise imports and for services rose in about the same proportion. Despite the substantial increase in merchandise imports in 1959, the level was somewhat below the peak in 1956. The gains were well distributed and included industrial machinery, farm machinery, consumer goods, both durable and non-durable, and industrial materials to support the higher level of production and to replenish stocks. Imports of certain items, such as primary steel and steel pipe, were significantly lower. The largest increase in imports came in the second quarter of the year; thereafter there was little change, seasonal factors apart. Payments for all items in the service account were substantially higher in 1959 than in 1958. The 12-p.c. increase in remittances of interest and dividends reflected growing indebtedness, higher interest rates, and larger dividend payments to non-residents. The rise in merchandise imports, particularly from overseas countries, swelled payments for freight and shipping. Higher economic activity brought larger payments for business services. Payments on tourist account were also up considerably.

The consequence of the changes in exports and imports of goods and services described above was a deficit on current international account (on the national accounts basis) of \$1,400,000,000, compared with one of \$1,000,000,000 in 1958, and slightly above the previous peak in 1957. Of this deficit about \$400,000,000 was on merchandise account. The \$1,000,000,000 deficit on service account, continuing the steady growth characteristic of recent years, was more than double the deficit from this source in 1955. Prices of imports were slightly lower, while prices of exports were moderately higher. Thus there was some improvement in the terms of trade.

Components of Gross National Product.—Labour income rose nearly 8 p.c. in 1959, reflecting a significant advance in employment, slightly longer hours of work in some industries, and the continuing upward trend of wage rates. All the major industries shared in the gain, in contrast to the situation in 1958 when labour income failed to rise in several important industries. The largest gain, 13 p.c., occurred in the service group (community, business, personal and recreational service). Labour income in mining, manufacturing and forestry rose 5 to 6 p.c. In forestry, the gain was largely associated with the increased employment in the industry in 1959 following a sharp contraction in the previous year. In manufacturing, a small gain in employment and in hours of work contributed to the advance in labour income.

Characteristically sensitive to changes in the tempo of economic activity, corporate profits reversed their downward trend in the middle of 1958 and rose sharply in the closing quarter. For the year 1959 the gain was 14 p.c., in contrast to a decline of 3 p.c. in 1958.

Increases in profits were widespread by industry and in many cases extremely large, particularly in those industries where earnings had deteriorated during the recession. Thus profits in mining were up 18 p.c., following an even sharper decline in 1958. The same rate

of increase occurred in manufacturing industries, with especially large gains in iron and steel and in chemical products. Among the manufacturing industries, only non-metallic mineral products and products of petroleum and coal failed to record any rise in profits.

Earnings in the goods-handling industries, like the goods-producing industries, had felt the impact of the recession and responded to the upswing in economic activity in 1959. Thus profits in transportation, communication and storage rose sharply, after having fallen a little in 1958. Profits in wholesale trade also recovered from their recessionary decline. In retail trade, in the financial group and in services, profits were either unchanged or slightly lower, in contrast to the situation in 1958 when profits in the service-connected industries continued to rise.

Rents, interest, and miscellaneous investment income rose 4 p.c. in 1959. The advance in rental income continued to reflect the growth of the housing stock and a further slight increase in rents. With the rise in interest rates, interest receipts of persons and governments were sharply higher in 1959. However, a large part of these receipts take the form of interest paid on the government debt which is not included as a part of national income. Trading profits of government enterprises were slightly higher in 1959, and investment income of life insurance companies and industrial pension funds rose sharply.

Accrued net income of farm operators in 1959 was about 7 p.c. below the level of the preceding year, largely as a result of a rise in farm operating expenses. On the other hand, income of non-farm unincorporated business was somewhat higher than in 1958, with the major part of the gain originating in service industries.

The progress of recovery, reinforced by some increase in tax rates, pushed up government revenue from indirect taxes 11 p.c. The yield of indirect taxes was substantially higher for all three levels of government. Subsidies rose very sharply in 1959, largely as a result of the losses incurred under the agricultural stabilization program, so that indirect taxes less subsidies were higher by 9 p.c.

Section 2.—Canada's International Investment Position*

Canada is by far the world's largest importer of private long-term capital, and the tremendous capital formation which has been a feature of the 1950's has been associated with an unprecedented growth in the country's external liabilities. These investments have contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of natural resources, and have added significantly to Canadian production, employment and income. At the same time they have added substantially to the burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

Canada's gross external liabilities amounted to \$24,100,000,000 at the end of 1959; non-resident-owned long-term investments in Canada had reached a book value of \$20,675,000,000, having doubled in the seven years since 1952, and the part of these investments in establishments controlled outside Canada totalled \$11,800,000,000. These foreign direct investments have been growing somewhat more rapidly than the total. Advances in other Canadian equities, although smaller, have also been substantial and there have been sharp increases in recent years in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada and to the heavy demands placed on capital markets by this factor and by the financial needs of governments and municipalities. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside of Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore and other mining, aluminum, nickel, pulp and paper, and chemical industries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled \$8,800,000,000 at the end of 1959 and government-owned assets made up a substantial part of that total. Canada's net balance of international indebtedness at the same date was estimated at \$15,300,000,000, almost half of which was incurred in the four years since 1955 and more than two-thirds in the seven years since 1952.

* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. A more extended review appears in DBS report *Canada's International Investment Position, 1926 to 1954* (Catalogue No. 67-503) and more recent statistics in the annual report *The Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201).

Foreign Investments in Canada.—Dependence upon external sources of capital for financing in earlier periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth period that occurred before World War I the rate of increase in non-resident investment was very high and dependency upon external sources of capital was greater than in later periods. Total non-resident investments in Canada increased from an estimated \$1,232,000,000 in 1900 to \$3,837,000,000 by 1914, mainly in the form of bonded debt for railway and other expansion guaranteed by the Canadian Government. This was the period when the principal external source of capital was London, and by 1914 British investments in Canada, estimated at \$2,778,000,000, were at about their highest level. By the same date, United States investments, although they had been increasing rapidly, had only about one-third of the value of British-owned investments.

During the first part of the inter-war period the United States became the principal source of external capital, and by 1926 the United States-owned portion of Canada's international debt exceeded that owned in the United Kingdom which had not increased since 1914. Growth in United States investments in Canada continued for some years but was interrupted in the 1930's when the total was reduced by repatriations of securities and other withdrawals of capital. Increases began again in the 1940's and by the end of World War II, United States investments of \$4,990,000,000 compared with British investments of \$1,750,000,000. The latter had been reduced by wartime repatriation measures and the proceeds were used in financing British expenditures in Canada. Following the War, up to 1948, some further declines occurred in British investments in Canada but since then they have increased.

United States investments have risen each year since the end of the Second World War, particularly since 1947 when the period of intense activity in the petroleum industry got under way following new discoveries. More than half the growth in United States investment in Canada has occurred since 1951. At \$15,725,000,000, United States investments in 1959 continued to represent more than three-quarters of all non-resident investments in Canada and also made up a similar ratio of the increase since 1951. The main rise occurred in direct investments in companies controlled in the United States, which are prominent in many branches of Canadian industry. By 1959 these had increased to two and one-half times their value in 1951. In the same period portfolio investments in Canada owned in the United States rose by more than two-thirds. A considerable part of this latter rise occurred in the period 1956-59 when large sales of new issues of securities were made in that country.

British investments in Canada totalled \$3,250,000,000 at the end of 1959. Although these investments then exceeded by some hundreds of millions of dollars the levels reached at the end of the First World War and again in the early 1930's, they accounted for only 16 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. British investments in Canada had more than doubled from the low point in 1948; the increase had been particularly concentrated in direct investments which had more than tripled and which, at the end of 1959, represented a much larger portion of the total than in the prewar period. In absolute terms, this rise in total British investments in Canada is more than the rise in investments by all other overseas countries in the same period, although the rate of increase has been lower.

Investments of countries other than the United States and the United Kingdom reached a record total of \$1,700,000,000 at the end of 1959. Approaching four times the corresponding 1951 figure, this represented a much higher rate of increase than had occurred in either United States or British investments and large increases had taken place in portfolio holdings of securities as well as in direct investments. At 8 p.c. of the total, this group of countries, mostly in Western Europe, made up a larger portion of total investments than ever before. Nearly 90 p.c. of the direct investments, which totalled \$493,000,000 in 1957, also came from Western Europe; more than one-quarter was of Belgian origin with French, Swiss and German investments making up the next largest groups.

The degree of dependence upon non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1955 the net use of foreign resources amounted to about one-fifth of net capital formation in Canada, and direct foreign financing amounted to about one-third. But from 1956 to 1959 when these ratios had increased considerably to more than one-third and two-fifths, respectively, they were still less than the corresponding ratios in the period 1929 to 1930 when inter-war investment activity was at its highest point. In that shorter period more than one-half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of investment was financed by external capital. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing predominate such as in merchandising, agriculture, housing, public utilities, and other forms of social capital. Thus non-resident financing of manufacturing, petroleum and mining has been much higher than the over-all ratios indicate, and has provided the major portion of the capital investment in this field in the period since 1948. The most recent comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1957 and it should be noted that subsequent changes may have increased non-resident ownership even more. In that year the Canadian manufacturing industry was 50 p.c. owned by non-residents but capital subject to foreign control was 56 p.c. These proportions compared with 47 p.c. and 51 p.c., respectively, as recently as at the end of 1954. In the field of petroleum and natural gas, non-resident ownership and control each amounted to 64 p.c. and 76 p.c., respectively, at the end of 1957 whereas at the end of 1954 non-resident ownership and control had amounted to 60 p.c. and 69 p.c., respectively; in mining and smelting, non-resident ownership and control amounted to 56 p.c. and 61 p.c., respectively, compared with 56 p.c. and 51 p.c. in 1954. However, resident-owned Canadian capital continued to play a leading role in the financing of such areas of business as merchandising, railways and other public utilities. Hence non-resident ownership of business as a whole, including industry, petroleum, mining, merchandising and railways and utilities, rose only slightly from 32 p.c. in 1948 to 35 p.c. in 1957 (the last year for which the calculation has been made). But, in the same years, companies subject to non-resident control increased from 25 p.c. to 33 p.c. their share of the total even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

The petroleum and natural gas industry, including exploration and development, refining, merchandising, pipelines and other distribution facilities, has been the largest single recipient of capital inflows in the postwar period, accounting directly for far more than one-half of the inflow of United States capital for direct investment in Canada. By the end of 1957, investments in Canadian petroleum concerns controlled in the United States made up 71 p.c. of the total. Another 5 p.c. of the investment was controlled in overseas countries. Investments owned in the United States and overseas were 58 p.c. and 6 p.c., respectively, of the total.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled in the United States. Such establishments having an investment of \$1,000,000 or more accounted for about 30 p.c. of Canadian manufacturing production in 1953 and 21 p.c. of employment in that field. These ratios in non-resident-controlled plants were considerably higher than in 1946—the previous year for which a study of this kind was made.

In some industries the proportions of production and employment in plants controlled in the United States were much higher than this. Automobiles, for example, are mainly produced in United States-controlled plants, but this is exceptional. Among other industries where well over one-half of the production is in United States-controlled firms are the smelting and refining of non-ferrous metals, petroleum refining, rubber products, and motor-vehicle parts. In several major industries like electrical apparatus and supplies and non-ferrous metal products the distribution of control between Canadian and United States-controlled companies is more evenly divided. In other industries the non-resident share is large although less than one-half the total. These include pulp and paper, other paper products, chemicals, medicinal and pharmaceutical products, sheet-metal products, and certain branches of the machinery industry.

There are, however, many industries where the largest part of production has been in Canadian-controlled plants. Prominent among these are such important branches of industry as primary iron and steel, and some other subdivisions of the iron and steel industry, textiles, clothing, and divisions of the foods and beverages industry, such as bakery products, beverages, and dairy products. But even in some of these industries changes in ownership and control have been occurring in recent years.

10.—Estimate of the Canadian Balance of International Indebtedness, as at Dec. 31, 1939-59

Canadian Assets Abroad.—While there has been a great growth in non-resident investment in Canada and in the balance of indebtedness to other countries, it will be noted that Canadian assets abroad, shown in Tables 13 and 14, have continued to rise in value each year. These now represent a larger proportion of liabilities abroad than was the case before World War II, but most of the increase since then has been in government-owned assets such as the official reserves and the loans by the Canadian Government to other governments which were extended during the War and early postwar years. In 1958 the government credits outstanding had a value of \$1,484,000,000 while official holdings of exchange amounted to \$1,879,000,000 in terms of Canadian dollars. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank, the International Finance Corporation and the International Monetary Fund which, by March 1959, amounted to \$70,900,000, \$3,500,000 and \$293,300,000, respectively, a substantial part being offset by liabilities to these institutions.

The portion of the assets in private investments, particularly in the form of direct investments abroad by Canadian companies, is still small in relation to the corresponding non-resident stake in equities in Canada. Private long-term investments abroad by Canadians in 1958 were made up of direct investments of \$2,174,000,000 and portfolio investments of \$1,078,000,000. More than two-thirds of the privately owned investments were located in the United States. Direct investments in that country by Canadian businesses have grown rapidly and are found in many fields among which the beverage and farm implement industries are particularly noteworthy.

Private investments in overseas countries are widely distributed. About one-half of the total in 1956 were located in Commonwealth countries, with somewhat less in the United Kingdom than in the remainder of the Commonwealth. Most of the direct investments in the United Kingdom were in industry, while in other Commonwealth countries there were investments in mining and petroleum as well as in industry. In foreign overseas countries the largest part is in the countries of Latin America made up mainly of holdings in public utilities.

13.—Canadian Assets Abroad, 1939, 1948 and 1955-58

NOTE.—Excludes investments of insurance companies and banks, Canada's subscriptions to international financial institutions and short-term assets, other than official holdings of gold and foreign exchange. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates. The series for portfolio investment was reconstructed in 1952 and is not strictly comparable with preceding years.

PART I.—CURRENCY AND BANKING*

A historical sketch of currency and banking in Canada appears in the 1938 Year Book, pp. 900-905.

Section 1.—The Bank of Canada

The Bank of Canada is Canada's central bank. It was incorporated under the Bank of Canada Act in 1934 and commenced operations on Mar. 11, 1935. The Act of Parliament which established the central bank charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it certain specific powers for discharging this responsibility. Through the exercise of these powers the Bank of Canada broadly determines the combined total of the basic forms of Canadian money held by the community—currency outside banks plus deposit balances in chartered bank accounts.

By virtue of the provisions of the Bank of Canada Act, which enable the central bank to increase or decrease the total amount of cash reserves available to the chartered banks as a group, the Bank of Canada is able to determine broadly the over-all level of the total assets and deposit liabilities of the group, and hence of the combined total of currency and bank deposits. The Bank Act requires that each chartered bank maintain a minimum amount of cash reserves in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. This minimum requirement is 8 p.c. of the bank's total Canadian dollar deposit liabilities on a monthly average basis. The ability of the chartered banks as a group to expand their total assets and deposit liabilities therefore depends on the level of total cash reserves. An increase in cash reserves will encourage the banks to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

* Except where otherwise indicated, this material has been revised by the Research Department of the Bank of Canada.

The chief method by which the Bank of Canada can affect the level of cash reserves of the chartered banks, and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in reserves of the chartered banks and makes it necessary for them to reduce their assets and deposit liabilities.

The influence that the Bank of Canada has on credit conditions and hence on economic behaviour stems from its ability to determine broadly the level of total holdings of currency and chartered bank deposits. The trend of total holdings of these forms of money can have an influence on liquidity generally, including effects on interest rates and bond prices and the availability of credit, and on expectations regarding future financial and economic trends, all of which have some effect on decisions to spend or to save. However, many factors other than changes in the money supply also have important influences on financial and economic developments, such as: the state of economic conditions and prospects outside Canada; the competitive strength of Canadian business enterprises both at home and abroad; the character of the investment decisions and price and wage policies in domestic industries; the skills and degree of mobility of labour; and the nature of public policies at all levels of government with regard to such matters as expenditure, taxation, subsidies and the regulation of industry.

In forming its judgments in the light of changing circumstances as to whether its operations should be such as to facilitate an increase or induce a decrease in the supply of money, or to hold it more or less constant, the Bank of Canada is bound by criteria laid down by Act of Parliament in the preamble to the Bank of Canada Act of 1934. In addition to the broad directive to the Bank "to regulate credit and currency in the best interests of the economic life of the nation", and "generally to promote the economic and financial welfare of the Dominion", it is also prescribed that the Bank should endeavour "to mitigate by its influence fluctuations in the general level of production, trade, prices and employment as far as may be possible within the scope of monetary action". Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing state of the economy as reflected in the complex pattern of economic and financial developments.

While the Bank of Canada has the power to determine the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. That depends on the wishes of the public, since deposits can be converted freely into notes and coin and back again. Nor does the Bank have any direct control over the growth of other forms of money or of close substitutes for money as a store of wealth in liquid form, of which there are many varieties in Canada—mainly deposit balances in savings institutions other than chartered banks and short-term securities issued by governments and corporations.

The cash reserve system in Canada, which is similar to that in a number of other countries, while placing the central bank in a position where it can determine within broad limits the total amount of chartered bank assets and deposits, leaves the allocation of bank credit and other forms of credit to the private sector of the economy. Each chartered bank can attempt to gain as large a share as possible of the total cash reserves by competing for deposits. Each bank determines how its assets will be distributed, for example, between various kinds of securities and loans to various types of borrowers. The Bank of Canada has no power to direct banks or other lenders to make funds available to certain groups or in certain regions on the same terms or on different terms than to other groups or in other regions. The influence of the central bank—based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securities—is both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are set forth in the Bank of Canada Act, 1934 (RSC 1952, c. 13), revisions in which were made in 1936, 1938 and 1954. Some of these powers are outlined below.

The Bank may buy and sell securities issued or guaranteed by Canada or any province, short-term securities issued by the United Kingdom, treasury bills or other obligations of the United States, and certain classes of short-term commercial paper. The Bank is authorized by the Industrial Development Bank Act to purchase bonds and debentures issued by the Industrial Development Bank. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange. The Bank may accept deposits that do not bear interest from the Government of Canada, the government of any province, any chartered bank or any bank to which the Quebec Savings Bank Act applies. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada.

The Bank has the sole right to issue paper money for circulation in Canada. Details regarding the note issue are given on p. 1132.

The Bank of Canada may vary the minimum cash reserve requirement of the chartered banks between 8 p.c. and 12 p.c. of their Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum notice period of one month before each increase becomes effective and that any increase is not more than 1 p.c. during any one month. When this legislation became effective on July 1, 1954 the requirement was 8 p.c. and it has since remained at that level. (Prior to July 1, 1954, each chartered bank was required to maintain at all times cash reserves equal to not less than 5 p.c. of its Canadian dollar deposit liabilities; in practice the chartered banks as a group normally worked to a ratio of about 10 p.c.)

The Bank may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge or hypothecation of certain classes of securities. Loans or advances on the pledge or hypothecation of readily marketable securities issued or guaranteed by Canada or any province may be made to the Government of Canada or the government of any province for periods not exceeding six months. Other loans may be made to the Government of Canada or the government of any province in amounts not exceeding a fixed proportion of such government's revenue; such loans must be repaid before the end of the first quarter after the end of the fiscal year of the borrower.

The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances; this rate is known as the Bank Rate. Since Nov. 1, 1956 the Bank Rate has been established weekly at a fixed margin of $\frac{1}{4}$ of 1 p.c. above the latest weekly average tender rate for 91-day treasury bills.

Sect. 23 of the Bank of Canada Act provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its outstanding notes and deposit liabilities. This requirement was suspended in 1940 when, under the terms of the Exchange Fund Order, the Bank's gold holdings were transferred to the Exchange Fund Account to form part of Canada's official gold and United States dollar reserves. The Currency, Mint and Exchange Fund Act passed in 1952 provides that, notwithstanding Sect. 23 of the Bank of Canada Act, the Bank of Canada is not required to maintain a minimum or fixed ratio of gold or foreign exchange to its liabilities unless the Governor in Council otherwise prescribes.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor General in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, one Director and the Deputy Minister of Finance (who is without a vote) which has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The Governor is the chief executive officer of the Bank and Chairman of the Board of Directors. The Governor has the power to veto any action or decision of the Board of Directors or of the Executive Committee but such veto is subject to confirmation or disallowance by the Governor General in Council. In the absence of the Governor, the Deputy Governor, who is a member of the Board, exercises all the powers and functions of the Governor.

The capital of the Bank is \$5,000,000 and is held entirely by the Minister of Finance. The Bank of Canada Act as amended in 1954 provides that each year 20 p.c. of the Bank's annual profits (after provision for depreciation in assets, pension funds and such matters) shall be allocated to the Rest Fund until the Rest Fund reaches an amount five times the paid-up capital of the Bank and the remainder shall be paid to the Receiver General and placed to the credit of the Consolidated Revenue Fund. At the end of 1957, the Rest Fund of the Bank reached its maximum of \$25,000,000 so that, since that date, the whole of the Bank's profits have been transferred to the Receiver General.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown. The agencies are chiefly concerned with the functions of the Bank as fiscal agent for the Government of Canada and with the issue and redemption of currency. The Industrial Development Bank, which is described on the following page, is a subsidiary of the Bank of Canada.

The Bank of Canada Act requires that statements of the assets and liabilities of the Bank on each Wednesday and the last day of each month be published in the *Canada Gazette*. A summary of the statement as at Dec. 31, 1957-59, appears in Table 1.

The Industrial Development Bank.—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

“To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.”

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada. The \$25,000,000 capital stock of the Bank (completely paid up) was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:—

- (1) lend money or guarantee loans;
- (2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
- (3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

Industrial enterprises as defined by the Act (amended in 1956) include: (1) manufacturing, processing, assembling, installing, overhauling, reconditioning, altering, repairing, cleaning, packaging, transporting or warehousing of goods; (2) logging, operating a mine or quarry, drilling, construction, engineering, technical surveys or scientific research; (3) generating or distributing electricity or operating a commercial air service, or the transportation of persons, or (4) supplying premises, machinery or equipment for any business mentioned in (1), (2) or (3) under a lease, contract or other arrangement whereby title to the premises, machinery or equipment is retained by the supplier.

The Bank may accept any form of collateral security against its advances, including real property. It is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. Its lending takes the form of fixed-term capital loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has offices in the following cities: Halifax, Saint John, Quebec, Montreal, Ottawa, Toronto, London, Sudbury, Winnipeg, Regina, Calgary and Vancouver.

2.—Assets and Liabilities of the Industrial Development Bank, as at Sept. 30, 1956-59

¹ Includes investments; the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

Section 2.—Currency

Subsection 1.—Notes and Coinage

Note Circulation.—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

3.—Bank of Canada Note Liabilities and Other Notes in Circulation, as at Dec. 31, 1950 and 1957-59

Coinage.*—Under the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins for the payment of any amount; in the case of silver coins for the payment of an amount up to \$10; nickel coins for payment up to \$5; and bronze coins up to 25 cents.

* Revised by the Master of the Royal Canadian Mint, Ottawa.

5.—Canadian Coin in Circulation, as at Dec. 31, 1950-59

¹ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

² Based on estimates of population as given at p. 196.

The Royal Canadian Mint.*—The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act 1870 and opened on Jan. 2, 1908. In 1931 (RSC 1952, c. 240) it was constituted a branch of the Canadian Department of Finance and has since operated as the Royal Canadian Mint. From 1858 the British North American provinces, and later Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham, England. Before that date, coins were mainly British, United States and Spanish. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica.

Before 1914 only small quantities of gold bullion were refined but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly 20,000,000 oz. t. of South African gold were treated on Bank of England account. The subsequent development of the gold mining industry in Canada resulted in gold refining becoming one of the principal activities of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately 400 oz. t. each or, for those mines authorized to sell gold in the open market, the bullion is shipped to various domestic and foreign processors. The fine silver extracted from the rough gold is generally used for coinage purposes.

* Revised by the Master of the Royal Canadian Mint, Ottawa.

¹ Less total float, i.e., cheques and other items in transit. ² The deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes were reclassified from "personal savings deposits" to "other notes deposits" as at Sept. 30, 1957, in the returns of the banks to the Department of Finance; from that date the figures are thus not comparable with those for previous years. The amount of deposits reclassified was approximately \$140,000,000.

Section 3.—Commercial Banking

As one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in one historical sketch, which is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies since Confederation; the last insolvency occurred in 1923.

Subsection 1.—Chartered Banks

Canadian commercial banks are chartered or licensed by the Government of Canada and operate under one federal statute—the Bank Act—which is revised every ten years and brought into line with changing economic conditions. In addition to conducting a commercial banking business the chartered banks hold most of the public's savings deposits. The last revision of the Bank Act took place in 1954.

Branches of Chartered Banks.—Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—

the Mercantile Bank of Canada—in 1953 brought the total to 11. Since then the amalgamation in 1955 of the Bank of Toronto and the Dominion Bank as the Toronto-Dominion Bank, and the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 has reduced this number to nine. The number of branches of chartered banks in each province periodically from 1868 is given in Table 8.

8.—Branches of Chartered Banks, by Province, as at Dec. 31 for Certain Years 1868-1959

NOTE.—Figures for 1920 and subsequent years include sub-agencies in Canada receiving deposits for the banks employing them; there were 747 such sub-agencies at Dec. 31, 1959.

Financial Statistics of the Chartered Banks.—The classification of chartered bank assets and liabilities was revised by the Bank of Canada Act 1954, so that some of the statistics given in the following tables are not comparable with those appearing in earlier editions of the Year Book. Figures shown in Table 11 prior to July 1954 have been adjusted to comply with the new classification. Month-end data are available from Dec. 31, 1954, to date in the Bank of Canada *Statistical Summary*.

11.—Assets and Liabilities of the Chartered Banks, as at Dec. 31, 1950-59

1955.....	541	293	834	9,915	8.4
1956.....	548	325	873	10,527	8.3
1957.....	535	335	870	10,601	8.2
1958.....	607	336	943	11,452 ^r	8.2
1959.....	648	351	999	12,187	8.2

¹ From July 1954 the figures are not adjusted for items in transit and are not strictly comparable with the figures for earlier periods. ² Prior to July 1, 1954, the statutory minimum requirement was 5 p.c. for each day; since that date it has been a monthly average of 8 p.c.

Liquid Asset Ratio.—In the course of discussions with the chartered banks in November and December 1955, the Bank of Canada urged the adoption of a standard practice regarding the maintenance of a minimum ratio of liquid assets (cash, day-to-day loans and treasury bills) to deposits. The purpose of this suggestion was to establish a working principle of bank operations which would help the central bank in the task of restraining inflationary pressures that might threaten in the future. After discussion the banks agreed to work to achieve by May 31, 1956, a minimum liquid asset ratio of 15 p.c. which they would endeavour to maintain on a daily average basis from June on. On this basis, fluctuations above or below 15 p.c. might occur from day to day or week to week, but for the month as a whole the average would not be below the target ratio. From June 1956 the banks have maintained a daily average ratio of at least 15 p.c.

¹ Realized profits and losses on disposal of securities are included in operating earnings. ² Before provision for income taxes, losses, and transfers to inner reserves. ³ Includes taxes other than income taxes. ⁴ Profits and losses on sale of fixed assets and adjustments relating to prior years. ⁵ After amounts retransferred to rest account. ⁶ Includes income taxes on taxable portion of additions to and amounts retransferred from inner reserves, and foreign income taxes.

Cheque Payments.—A monthly record of the amounts of cheques charged to customer accounts at all chartered bank offices in 35 major clearing-house centres of Canada is available from 1924. Except for a minor setback in 1938, the value of cheques cashed shows a continuously upward trend from 1932, the low point of the depression years. The total of \$248,869,352,000 in 1959 was a record, 705 p.c. greater than in 1938; the increase equalled the gain in gross national product during the same period. The advance was well distributed throughout Canada's five economic areas. British Columbia showed the largest gain with an increase of 810 p.c. Ontario was second with an advance of 753 p.c. followed in order by the Prairie Provinces, Atlantic Provinces and Quebec.* As compared with 1958, all five areas showed gains, with Ontario accounting for nearly 55 p.c. of the \$27,579,400,000 advance.

* St. John's, Nfld., was included in the 1959 figure but not in 1938 data. Excluding this centre in 1959 the ranking would be the same as above, except that Quebec would precede the Atlantic Provinces.

Value of cheques cashed in 34 of the 35 centres was higher in 1959 than in 1958. Payments in the two leading centres reached all-time highs, Toronto advancing nearly 15 p.c. and Montreal over 11 p.c. In the same comparison Winnipeg rose 8.2 p.c. and Vancouver 8.3 p.c.

17.—Cheques Cashed at 35 Clearing-House Centres, 1955-59

NOTE.—Figures for earlier years will be found in the corresponding table of previous Year Books.

¹ Includes some debits reported in preceding years.

Subsection 2.—Government and Other Banking Institutions

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Newfoundland, Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec—the Montreal City and District Savings Bank and La Banque d'Économie de Québec—established under federal legislation and reporting monthly to the federal Department of Finance. In addition, co-operative credit unions encourage savings among low-income classes and extend small loans to their members.

Post Office Savings Bank.—The Post Office Savings Bank was established under the Post Office Act of 1867 (SC 1867, c. 10) to “enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon”. Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929. Summary financial statistics for the years ended Mar. 31, 1957-60, follow. Figures back to 1868 are available in previous editions of the Year Book.

Provincial Government Savings Banks.—Institutions for the deposit of savings are operated by the Provincial Governments of Newfoundland, Ontario and Alberta.

Newfoundland.—The Newfoundland Savings Bank was established in 1834 and the following is a summary financial statement for the years ended Mar. 31, 1957-60.

<i>Item</i>	<i>1957</i>	<i>1958</i>	<i>1959</i>	<i>1960</i>

The number of accounts decreased from 35,187 at Mar. 31, 1959 to 34,791 at the same date of 1960; deposits decreased from \$28,307,692 to \$27,545,371 in the same comparison. The interest rate payable on deposits of private individuals, trust funds and estates is 3 p.c. per annum and on deposits of corporations 1½ p.c. per annum.

Ontario.—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of 2½ p.c. and 2½ p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits at Mar. 31, 1960 were \$75,000,000 and the number of depositors was approximately 95,000. Twenty-one branches were in operation throughout the province.

Alberta.—Savings deposits are accepted at 50 Provincial Treasury Branches throughout Alberta. The total of these deposits at Mar. 31, 1959 was \$29,914,297, payable on demand and bearing interest at 2½ p.c. per annum.

The Provincial Treasury has issued demand certificates bearing interest at 1½ p.c. or term certificates for one, two, three, four or five years in denominations of \$25 and upwards, bearing interest at 2 p.c. for one or two years, 2½ p.c. for three or four years and

2½ p.c. for five years. The total amount in savings certificates at Mar. 31, 1959 was \$950, made up of \$850 in demand certificates and \$100 in term certificates. Deposits from the public for the purchase of such certificates were discontinued as of April 1951.

Quebec Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Mar. 31, 1960, a paid-up capital and reserve of \$9,500,000, savings deposits of \$236,379,417 and total liabilities of \$248,235,485. Total assets amounted to \$248,235,485, including \$157,000,000 of federal, provincial and municipal securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7, had, at Mar. 31, 1960, savings deposits of \$36,234,949 and a paid-up capital and reserve of \$3,000,000. Liabilities amounted to \$46,556,793 and total assets to a like amount.

The following statement shows the combined savings deposits in the Montreal City and District Savings Bank and La Banque d'Économie de Québec for the years ended Mar. 31, 1951-60. Figures back to 1868 are available in previous editions of the Year Book.

<i>Year</i>	<i>Deposits</i>	<i>Year</i>	<i>Deposits</i>

Credit Unions.—Credit unions are incorporated under provincial law to enable groups of people with a common bond of association to pool their savings. The bond of association may be membership in a parish, club, lodge or labour union, that of employment in a plant, industry or department, or that of residence in a rural or a well-defined urban community. The figures of Table 18 show the growing importance of credit unions as savings and loan institutions in Canada. During the ten years 1949-58 the number of credit unions chartered increased by 57 p.c., the number of members in reporting organizations by 135 p.c. and the assets of reporting organizations by 257 p.c., the latter passing the billion-dollar-mark for the first time in 1958.

Quebec holds the lead in the Canadian credit union movement, having more than half of the total membership of all credit unions across the country. Ontario runs close to Quebec in number but total membership and assets in that province are much lower. All provinces except Newfoundland shared in the increase in membership reported for 1958.

About 38 p.c. of the credit unions in Canada are rural, although there is some variation as to type in different areas of the country. In the Atlantic Provinces, Quebec and Saskatchewan the credit unions are predominantly rural. In Ontario the occupational type of union accounted for 55 p.c. of the total in 1958 and occupational credit unions also lead in Alberta and British Columbia. In Manitoba, rural and occupational types are about equal. Recently the greatest gain has been shown in the occupational group.

Loans are granted to members for provident and productive purposes from the accumulated pooled savings and are mostly secured by personal notes. Loans to members in 1958 amounted to \$394,000,000, at interest rates of 1 p.c. per month or less on the unpaid balance. There were 27 central credit unions in 1958 having the main purpose of acting as credit unions for credit unions, namely, to receive deposits from and make loans to individual credit unions. These centrals are incorporated under provincial legislation to facilitate the flow of funds to credit unions that cannot meet the demand for local loans. Some of these central credit unions admit co-operative associations to membership but most of them limit their membership to credit unions.

The Canadian Co-operative Society serves as a central credit union for provincial centrals and co-operatives all across Canada.

Section 4.—Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870, was defined as 15/73 of the British gold sovereign.* That is, the par rate of exchange between the dollar and the pound sterling was fixed at \$4.866, making the Canadian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under \$2 per thousand.

* The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

On the outbreak of World War I, Canada and the United Kingdom suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at \$4.76 in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of the United Kingdom, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

From 1915 to the end of 1917 fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919 the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as \$3.18.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After the United Kingdom resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930,* when it went to a small premium in New York, the dollar remained below parity until the United Kingdom abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933, both currencies had reached a premium in New York. Meanwhile in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved towards resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at \$35 per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, the United Kingdom and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of \$4.02½ and \$4.03½, respectively, in terms of the U.S. dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control† in Canada and established fixed buying and selling rates of \$1.10 to \$1.11 for the U.S. dollar and \$4.43 to \$4.47 for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of \$1.00 to \$1.00½ and for sterling \$4.02 to \$4.04. These rates continued in effect until Sept. 19, 1949 when, following a 30.5-p.c. reduction by the United Kingdom in the value of sterling to \$2.80 U.S. (an action which was paralleled in varying degrees by numerous other cur-

† The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in previous editions of the Year Book.

rencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds. Sterling was quoted at \$3.07½ and \$3.08½ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2. Since then the Government's policy has been to allow the rate to be determined by the normal play of economic forces without official intervention by the Exchange Fund Account except to ensure orderly conditions in the foreign exchange market. No attempt is made to reverse persistent trends, but only to smooth out excessive short-run fluctuations.

Until Dec. 14, 1951, this policy was carried out within the framework of exchange control. On that date the Foreign Exchange Control regulations were revoked by the Governor in Council and new regulations were passed which exempted all persons and transactions from the various requirements of the Foreign Exchange Control Act. These actions terminated exchange control in Canada and the Foreign Exchange Control Act was repealed in 1952.

The movements of the U.S. dollar in Canadian funds from January 1952 to the end of 1959 are shown in Table 20.

¹ Does not include \$18,200,000 in U.S. funds borrowed in the U.S. in August 1949 by the Government of Canada and set aside for the purpose of retiring an equal amount of certain securities payable in U.S. dollars on Feb. 1, 1950.

² On Oct. 1, 1959, \$62,500,000 representing the gold portion of Canada's increased quota was transferred to the International Monetary Fund.

PART II.—MISCELLANEOUS COMMERCIAL FINANCE

Section 1.—Loan and Trust Companies*

An outline of the development of loan and trust companies in Canada from 1844 to 1913 is given in the 1934-35 Year Book, p. 993. The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (RSC 1952, cc. 170 and 272), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary information has been supplied by provincial companies since 1922 and figures for the years 1957 and 1958 are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 95 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with the federally licensed companies.

The statistics of Tables 2 and 3 refer to those companies incorporated both by the Government of Canada and by the provinces. Included in the statistics of federal companies are data of loan and trust companies incorporated by the Province of Nova Scotia and brought by the laws of that province under the examination of the federal Department of Insurance, as well as data for trust companies in New Brunswick and Manitoba.

The progress of the aggregate of loan company business in Canada is indicated by the increase in the book value of the assets of all loan companies from \$188,186,072 in 1923 to \$605,373,501 in 1958. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$970,398,170 in 1958. In the former year the total of estates, trust and agency funds administered amounted to \$1,077,953,643 and in 1958 to \$6,318,998,234.

Functions of Loan Companies.—The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. The extent of investments in mortgages by federal and provincial loan companies may be gauged by the following figures: total assets of such companies for the years 1957 and 1958 amounted to \$549,071,796 and \$605,373,501, respectively, which amounts include mortgage loans of \$420,635,499 and \$456,689,053, respectively; thus, the resulting percentages of mortgages to total assets for those years were approximately 77 p.c. and 75 p.c., respectively. The data for 1957 includes for the first time the figures of one loan company incorporated under the laws of Quebec (the capital stock of which has been issued largely outside of Canada but whose debentures for the greater part are now held in Canada) having, as at Dec. 31, 1958, assets of \$87,887,641 including mortgage loans amounting to \$75,323,498, and liabilities to the public of \$55,129,658.

Functions of Trust Companies.—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stocks and bond issues, as trustees for bond issues and where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment but the investing and lending of such deposits and of actual trust funds are restricted by law.

* Revised under the direction of the Superintendent of Insurance for Canada, Ottawa.

Statistics of Loan and Trust Companies.—A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters and the provincial figures represent much larger amounts than those of the federal companies.

The figures for federal loan companies include companies chartered by the Government of Nova Scotia which, by arrangement, come under inspection by the federal Department of Insurance. The data for federal trust companies cover companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba for the same reason.

Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders*

Licensed small loans companies and licensed money-lenders are subject to the provisions of the Small Loans Act (RSC 1952, c. 251) as amended by c. 46 of the Statutes of 1956, an enactment of the Parliament of Canada regulating personal loans not in excess of \$1,500 made on the security of promissory notes of borrowers. Most of these notes are additionally secured by endorsements or chattel mortgages. The Act permits, in the case of licensed lenders, maximum rates of cost of loan, including charges of every kind, of 2 p.c. per month on that portion of the unpaid balance of a loan not exceeding \$300, 1 p.c. per month on that portion of the balance exceeding \$300 but not exceeding \$1,000, and one-half of 1 p.c. per month on any remainder of the balance exceeding \$1,000. The maximum rate permitted to be charged by an unlicensed lender is 1 p.c. per month. Prior to Jan. 1, 1957, the scope of the Act extended only to loans of \$500 and under and the maximum rate permitted to be charged by licensed lenders was 2 p.c. per month and by unlicensed lenders 12 p.c. per annum. The small loans companies—four in number—were incorporated by special Acts of the Parliament of Canada, the first such company commencing business in 1928. Money-lenders, of which there are 76, are made up of companies otherwise incorporated and include a few partnerships and individuals. Table 5 gives the combined financial experience of small loans companies and licensed money-lenders for the years 1955-58.

* Further details are given in the Department of Insurance report *Small Loans Companies and Money-Lenders* for the year ended Dec. 31, 1958.

¹ Commencing Jan. 1, 1957, the Small Loans Act became applicable to loans of \$1,500 or under made on and after that date (see text above).

The combined companies showed a substantial increase in the amount of business for 1958 as compared with 1957. While the number of small loans made to the public during the year 1958 increased from 1,075,322 to 1,107,500 or by only 3 p.c., the amount of such loans rose from \$368,392,107 to \$477,705,515 or by 30 p.c. The average small loan made was approximately \$431 in 1958 compared with \$343 in 1957. At the end of 1958 small loans outstanding numbered 892,111 for an amount of \$315,827,669 or an average \$354 per loan. These figures compare with 812,135, \$229,199,621 and \$282, respectively, for 1957.

Section 3.—Sales of Canadian Bonds*

Previous editions of the Year Book have traced sales of Canadian bonds to the end of 1958. This review continues a record of new issues placed in 1959 with some reference to developments in the first half of 1960.

Although there were wide variations in different types of financing, new issues came on the bond market in 1959 at approximately the same over-all dollar total as in 1958 and 1957 and at about the level of 1954. On the other hand, they were considerably above the totals for 1956 and 1955 as well as for the years previous to 1954. Grand totals were \$4,220,000,000 in 1959, \$4,600,000,000 in 1958, \$4,490,000,000 in 1957, and \$4,460,000,000 in 1954; they compared with \$3,090,000,000 in 1956, \$2,660,000,000 in 1955 and \$2,940,000,000 in 1953.

With the exception of Series 14, 1959, final totals for which were not available at time of writing, these calculations include complete totals for all Savings Loan issues in previous years, i.e., either up to the year-end, or to a closing date within the year, or to a closing date in subsequent years. They exclude all Federal Government financing of less than one year such as the weekly treasury bill issues, which totalled \$6,940,000,000 in 1959, \$6,760,000,000 in 1958, and \$6,530,000,000 in 1957. With the addition of treasury bill issues, the total for all new financing would amount to \$11,170,000,000 in 1959, \$11,360,000,000 in 1958 and \$11,020,000,000 in 1957.

Also excluded is the Canada Conversion Loan of 1958 which was issued for the refunding of the 5th to 9th Victory Loans (dealt with in the 1959 Year Book, pp. 1130-1131). If the amount of \$5,800,000,000 for this financing were added to the 1958 figures, the grand total for that year would be \$17,170,000,000, thus placing it in a completely unique classification.

Exclusive of refunding and short-term financing, there were several significant trends in new bond sales for the year 1959. While Federal Government financing held up, declines of varying degrees took place in all other classifications, reversing the increases previously shown in new provincial, municipal and corporation issues. Particularly in the corporation field, there was a very marked decline during 1959 with financing only a little more than one-half the total for 1958 and one-third the peak in 1957.

Excluding all refunding and new issues with a term to maturity of less than one year, new offerings of Federal Government issues totalled \$2,775,165,950 in 1959, compared with \$2,624,534,050 in 1958 and \$2,468,792,850 in 1957. Besides Canada Savings Bonds, Series 14, the 1959 federal total included a \$200,000,000 issue in February, a \$200,000,000 issue in June, and three issues for a total of \$510,000,000 in September; also issued in September was an additional \$40,000,000 with a maturity of less than one year. In addition, the Federal Government guaranteed an issue for \$150,000,000 in May 1959 and another for \$300,000,000 in November. Both were guaranteed on behalf of the Canadian National Railways.

* Prepared by E. C. Gould, Financial Editor, *The Monetary Times*.

A very considerable amount of new capital was acquired by the Federal Government in 1959 through public subscription to Canada Savings Bonds, Series 14. This issue, calculated to the year-end, reached a record of \$1,415,000,000. There were 660,500 applications for \$219,000,000 on the Payroll Savings Plan and 737,000 applications for \$1,196,000,000 by the general public, which classification included chartered banks, investment dealers, trust and loan companies, and other savings institutions. Several new features added to the attractiveness of the issue for investors. There was a higher yield at 4.98 p.c., including a 3-p.c. non-taxable premium of principal amount which will be paid at maturity in 1968. For the first time, Savings Bonds could be registered directly for estates or in the names of trustees or administrators. The Series had a limit of \$20,000 for each individual purchase, raised from \$10,000 in 1958 and 1957. Other limits have been \$5,000 for the issues of 1951 to 1956, \$1,000 for the issues of 1947 to 1950, and \$2,000 for the first issue in 1946.

6.—Sales of Canada Savings Loans, 1946-59

NOTE.—Figures for the issues 1946-58 are for the entire loans, i.e., either to the year-end or to the closing date within the year or in the subsequent year. The figure for Series 14 (1959) is to Dec. 31, 1959.

Series	Applications	Limits per Individual	Total Sales
	No.	\$	\$
Series 1, 1946.....	1,248,444	2,000	535,285,550

Series 12, 1957.....	1,293,163 [±]	10,000	1,216,711,900 [±]
Series 13, 1958.....	1,179,198 [±]	10,000	923,697,450 [±]
Series 14, 1959.....	1,397,500	20,000	1,415,165,950

In contrast to Federal Government financing, all other classes of security issues placed in 1959 showed declines from the previous year, some moderately but others markedly down. Direct financing by the provinces, for example, showed only a minor decrease as compared with 1958 but the issues guaranteed by the provinces experienced a considerably greater decline than did direct issues. As a result, the combined total of direct and guaranteed provincial financing was off by over \$100,000,000.

In the category of combined direct and guaranteed provincial financing, the total for 1959 was \$653,001,875, compared with \$791,271,000 in 1958. Of the 1959 total, \$277,180,000 was for direct provincial government financing and the remainder represented provincial guarantees for utility, municipal, and parochial purposes. Of the comparable total in 1958, \$290,800,000 represented direct provincial financing and \$500,471,000 was of a guaranteed nature.

Provincial entries into the bond market in 1959 were:—

<i>Province</i>	<i>Month</i>	<i>Amount</i>	<i>Province</i>	<i>Month</i>	<i>Amount</i>
		\$			\$
New Brunswick.....	January.....	6,500,000	Prince Edward Island..	October.....	4,000,000

Manitoba.....	October.....	20,000,000			

In the field of direct municipal financing (exclusive of municipal issues guaranteed by various provinces) the market for new flotations was down from \$401,426,925 in 1958 to \$351,009,264 in 1959. On the other hand, loans for parochial or educational and miscellaneous purposes experienced some increase. Classified independently of other municipal financing, they were up from a total of \$62,081,000 in 1958 to \$73,804,100 in 1959. This increase, however, was not sufficiently great to offset a decline in the combined totals. Municipalities of Vancouver, Regina, Winnipeg, Hamilton, Toronto, Montreal and Ottawa were the largest municipal borrowers during 1959.

New corporation bond sales declined drastically in 1959 to \$369,025,000 from a record total of \$1,024,604,100 in 1957 and from \$729,225,000 in 1958. The general slow-down of business activity which began towards the end of 1957 and continued through 1958 and 1959 was reflected in the number and amount of new corporation issues placed. Of note was an increase of special features such as attached stock purchase warrants, share bonuses, rights of various kinds, and offerings in units with common shares. These measures were intended to make new issues more attractive for investors in view of an indifferent market.

The largest issues for new corporation borrowing in the domestic bond market during 1959 included two flotations of \$30,000,000 and \$40,000,000 by the British Columbia Electric Company Limited, a \$25,000,000 flotation by Irving Refinery Limited, \$17,000,000 by BP Refinery Canada Limited, \$20,000,000 by Simpsons-Sears Acceptance Company Limited, \$35,000,000 by The Bell Telephone Company of Canada, and \$20,000,000 by Dominion Foundries and Steel Limited. New corporate money borrowed in the United States during 1959 included \$4,000,000 by Thorncliffe Park Limited, \$20,000,000 by Canadian Acceptance Corporation, \$4,000,000 by Laurentide Acceptance Corporation Limited, \$4,500,000 by Provo Gas Producers, and \$5,000,000 by Simpsons-Sears Acceptance Company Limited.

During 1959, the total of all new Canadian bond sales in the United States amounted to \$472,856,431, compared with \$486,950,621 in 1958 and \$606,876,100 in 1957. Of the 1959 total, \$310,200,000 was for direct and guaranteed provincial issues, compared with \$195,000,000 in 1958 and \$122,000,000 in 1957. Of the municipal issues, the amount sold in the United States in 1959 was \$112,356,431 compared with \$175,300,621 in 1958 and \$94,818,800 in 1957. In keeping with the marked over-all decline, only \$50,300,000 in corporation financing was placed on the United States market in 1959, compared with \$116,650,000 in 1958 and \$390,057,300 in 1957.

The above analysis shows that during 1959 the bond market was preoccupied with the needs of Federal Government finance. However, since then there have been indications of a shift of emphasis back to other forms of security financing. Information available for the first six months of 1960 shows increases in provincial, municipal and corporation issues over the same period of 1959; provincial and municipal issues also compared favourably with the totals for 1958 and 1957 but, while sales of new corporation issues for the first half of 1960 were higher than those for the same period of 1959, they were still well below comparable figures for 1958 and far below those of 1957.

7.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1950-59

(SOURCE: *The Monetary Times*)

NOTE.—Figures from 1904 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as life, fire and casualty. Most companies operate under Federal Government registration although some have provincial licences only. Also many fraternal orders and societies are engaged in this kind of business. The special articles relating to insurance that have appeared in previous editions of the Year Book are listed in Part II of Chapter XXVII under the heading "Insurance".

Section 1.—Life Insurance†

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to over \$36,496,000,000 at the end of 1958, an increase of \$3,409,000,000 during the year. The ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year, which had hovered around 10 p.c. each year during the decade ended in 1955, increased to 14.3 p.c. in 1956 but fell back slightly to 13.8 p.c. in 1957 and to 10.3 p.c. in 1958.

* Material in this Chapter, except as otherwise indicated, has been prepared under the direction of the Superintendent of Insurance for Canada, Ottawa. More detailed data are available in the Annual Reports of the Department of Insurance.

† All the amounts given in the tables of this Section are net amounts after deduction of reinsurance ceded.

Subsection 1.—Summary of Life Insurance in Canada

Tables 1 and 2 summarize insurance premiums, claims, amounts of new policies effected, and amounts of insurance in force on Dec. 31 for the years 1957 and 1958. These data are presented in Table 1 on the basis of the supervising government authorities for the companies and societies concerned, and the same data are presented in Table 2 classified on the basis of nationality of company or society and by supervising government authorities.

Subsection 2.—Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has more than doubled since the end of World War II—evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. During 1958, life insurance business was transacted in Canada by 75 active companies having federal registration, including 32 Canadian, eight British and 35 foreign companies. There were also six British and three foreign companies that have indicated their intention of doing no new business in Canada. In addition, two foreign companies, one first registered in 1957 and the other in 1958, transacted no business in Canada during the year and one other foreign company ceased transacting business in Canada on Jan. 22, 1958.

The operations analysed in the tables of this Subsection, with the exception of Table 6, include only those companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for about 93 p.c. of the life insurance in force in Canada.

3.—Life Insurance Effectuated and in Force in Canada by Companies under Federal Registration, Decennially 1880-1950 and Annually 1951-58

NOTE.—Figures for 1889-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; and for 1940-49 in the 1957-58 edition, p. 1168. Statistics of fraternal society insurance, excluded here, are given at pp. 1164-1165.

Subsection 3.—Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 8 and 9 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

Subsection 4.—Life Insurance Effected through Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 10 gives statistics of life insurance effected through fraternal benefit societies by Canadian members and Table 11 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The first sections of Tables 10 and 11 relate to the 16 Canadian societies registered by the federal Department of Insurance, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, though forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not previously been licensed by the provinces have since obtained federal authority to transact business. During 1958, 31 foreign fraternal benefit societies transacted business in Canada; two of these societies do not grant life insurance benefits.

Subsection 5.—Life Insurance Effectuated and in Force Outside Canada by Canadian Companies under Federal Registration

In this Subsection, there are given for the years 1956 and 1957 summary statistics of insurance effectuated and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The statistics for individual companies are shown in Table 12 and for individual currencies in Table 13. The data given in both of these tables are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies. Although these book rates of exchange do not follow the day-to-day fluctuations in the current rates of exchange, they are adjusted when necessary to keep them reasonably in line with the current rates.

Canadian life insurance companies operating under federal registration at Dec. 31, 1957, had life insurance in force amounting to \$9,515,844,547 in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to \$9,462,657,264; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to \$22,262,730,280 at Dec. 31, 1957, and the total business on the books of these companies, in and out of Canada, amounted to \$31,778,574,827. Thus, about 30 p.c. of the total business in force for Canadian companies registered by the Federal Government was in force in countries outside Canada.

In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1957, Commonwealth and foreign investments in the amount of \$2,409,347,977.

12.—Life Insurance Effectuated and in Force for Canadian Companies (excluding Fraternal Societies) under Federal Registration, in Currencies other than Canadian Dollars, by Company, 1957 with Totals for 1956.

Section 2.—Fire and Casualty Insurance

At the end of 1958, there were 291 companies registered by the Federal Government to transact fire insurance (84 Canadian, 87 British, and 120 foreign). Of that number, 282 companies (78 Canadian, 87 British and 117 foreign) were also registered to transact casualty insurance. Thus it may be seen that most companies registered by the Federal Government to transact fire insurance in Canada also transact casualty insurance.

At the end of 1958, there were 85 companies registered by the Federal Government to transact casualty insurance but not fire insurance (16 Canadian, 6 British, and 63 foreign).

The figures in the preceding two paragraphs include 54 companies that were also registered to transact life insurance, 11 of which were registered for fire, life and casualty insurance and 43 for life and casualty but not fire insurance.

It should be noted that, in addition to the companies registered by the Federal Government to transact casualty insurance, there were 23 registered fraternal benefit societies transacting accident and sickness insurance, of which 20 also transacted life insurance.

As shown in Table 14, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces. Many of them are mutual organizations transacting only fire insurance on a county, municipal or parish basis.

Table 14 summarizes net premiums written and net claims incurred for the years 1957 and 1958 in the fields of fire insurance and casualty insurance in Canada. These data are presented on the basis of the supervising government authorities for the companies concerned. The table relates only to insurance companies; no data are included with respect to fraternal benefit societies.

¹ Includes the Yukon and Northwest Territories, also certain 'floaters' business that cannot be apportioned to any one province.

Subsection 2.—Fire Losses

The information in Tables 17 to 20, which deals with the loss of property and life caused by fire, has been summarized from the annual *Statistical Report of Fire Losses in Canada* prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses not included in these figures amounted to \$5,706,605 in 1958 from 2,424 fires.

17.—Statistics of Fire Losses, 1947-58

NOTE.—Figures for 1926-46 are given in the 1947 Year Book, p. 1078. Figures from 1922 may be obtained from the Dominion Fire Commissioner, Department of Public Works.

Year	Fires Reported	Property Loss ¹	Loss per Capita	Deaths by Fire	Year	Fires Reported	Property Loss ¹	Loss per Capita	Deaths by Fire

¹ Excludes forest fires and Federal Government property losses.

² Includes Newfoundland.

³ New-

foundland included from 1955.

The provincial property losses for 1955-58 given in Table 18 include both insured and uninsured losses. The percentages of the provincial totals uninsured in 1958 were: Prince Edward Island 34; Nova Scotia 26; New Brunswick 29; Quebec 13; Ontario 13; Manitoba 17; Saskatchewan 7; Alberta 26; British Columbia 34; and the Yukon and Northwest Territories 42. Uninsured losses formed 17 p.c. of the total losses for Canada.

Subsection 4.—Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration

The financial statistics of Tables 22 to 24 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

22.—Total Assets for Fire and Casualty Insurance of Canadian Companies under Federal Registration and Assets in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1956-58.

Section 3.—Government Insurance

In addition to the insurance provided by private insurance companies, various types of government insurance schemes have been adopted in recent years by the federal and provincial governments.

Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Provincial Insurance Schemes.—Saskatchewan.—The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness, life and hail. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surpluses are invested, as far as possible, within the province. Premium income for 1959 amounted to \$7,588,594 and earned surplus to \$508,723. The total amount made available to the Government of Saskatchewan since the beginning of government insurance operations in 1945 to Dec. 31, 1959 was \$3,450,633. Assets at the latter date were \$16,881,497, of which more than \$10,000,000 were invested in bonds and debentures issued by Saskatchewan schools, municipalities and hospitals. Over 600 independent insurance agents sell government insurance throughout Saskatchewan.

The Automobile Accident Insurance Act, which became effective Apr. 1, 1946, is administered by the Saskatchewan Government Insurance Office. It establishes a compulsory automatic insurance plan designed to provide a reasonable minimum of compensation for losses arising from motor vehicle accidents regardless of fault. Rates vary from \$4 a year for trucks to \$40 for late-model private passenger cars, and also vary for other types of motor vehicle depending on size and usage. From the inception of the Act in 1946 to Apr. 30, 1960, more than \$41,000,000 were paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Promotion and Advertising Department of the Saskatchewan Government Insurance Office, 11th and Cornwall Streets, Regina, Sask.

Alberta.—Provincial Government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates firstly to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and secondly to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. While both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act.

It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Information on insurance matters additional to that set out above may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—THE ARMED SERVICES AND DEFENCE RESEARCH*

Section 1.—The Department of National Defence

The Minister and Associate Minister of National Defence exercise control over and management of the Canadian Armed Forces, the Defence Research Board and other matters relating to national defence. Under their direction the three Chiefs of Staff are responsible for the control and administration of their respective Services and the Chairman of the Defence Research Board is responsible for research and development in defence matters. The Chairman of the Chiefs of Staff Committee is responsible to the Minister for ensuring that all matters of joint defence and defence policy, in its widest sense, are carefully examined and co-ordinated before decisions are made.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. The Deputy Minister is assisted by an Associate Deputy Minister and four Assistant Deputy Ministers each of whom administers a division of the Deputy Minister's branch responsible for matters of: administration and personnel; construction, engineering and properties; finance; and supply. Also responsible to the Deputy Minister are: the Controller General of Inspection Services, the Judge Advocate General, the Chief Secretary, and the Director of Public Relations.

A number of committees meet at regular intervals to consider and advise on joint issues. These include:—

- (1) **Defence Council.**—Composed of the Minister of National Defence (Chairman), the Associate Minister (Vice-Chairman), the Parliamentary Secretary, the Deputy Minister, the Chairman of the Chiefs of Staff Committee, the three Chiefs of Staff, the Chairman of the Defence Research Board and the Associate Deputy Minister; its purpose is to advise the Minister on administrative and other matters.
- (2) **Chiefs of Staff Committee.**—Composed of the Chairman of the Chiefs of Staff, the three Chiefs of Staff and the Chairman of the Defence Research Board. The Deputy Minister of National Defence attends regularly and the Secretary to the Cabinet and the Under Secretary of State for External Affairs attend when required. The purpose of the Committee is to maintain a continuous review of all operational problems; sub-committees consider various aspects of these problems and report to the parent committee.

* Prepared in the Office of the Deputy Minister, Department of National Defence, Ottawa.

- (3) **Personnel Members Committee.**—Composed of the Chief of Naval Personnel, the Adjutant-General, the Air Member for Personnel, the Assistant Deputy Minister (Administration and Personnel), the Assistant Deputy Minister (Finance) and a representative of the Chairman of the Defence Research Board. The purpose of the Committee is to examine personnel problems of the three Services with the general aim of achieving uniform personnel policies; sub-committees consider various aspects of personnel problems and report to the parent committee.
- (4) **Principal Supply Officers Committee.**—Composed of the Chief of Naval Technical Services, the Quartermaster-General, the Air Member for Technical Services, the Assistant Deputy Minister (Requirements) and a representative of the Chairman of the Defence Research Board. The purpose of the Committee is to consider logistical problems; sub-committees consider various aspects of these problems and report to the parent committee.

Defence Supply Committee.—An interdepartmental committee composed of the Deputy Ministers of National Defence and of Defence Production and the senior military and civilian supply officers of the two Departments has been established to review interdepartmental procurement and production problems and consider various policy aspects of the procurement of ammunition, armament, aircraft, etc. Eleven panels consider various aspects of these problems and report to the parent committee.

Canada-United States Committee on Joint Defence.—Composed of: for Canada, the Secretary of State for External Affairs, the Minister of National Defence and the Minister of Finance; for the United States, the Secretary of State, the Secretary of Defense and the Secretary of the Treasury; together with such appropriate Cabinet Members as either Government may designate from time to time as the need arises.

The function of this Committee is to consult periodically on any matters affecting the joint defence of Canada and the United States; to exchange information and views at the Ministerial level on problems that may arise, with a view to strengthening further the close and intimate co-operation between the two Governments on joint defence matters; and to report to the representative Governments on such discussions in order that consideration may be given to measures deemed appropriate and necessary to improve defence co-operation. The Committee meets at least once a year or as may be considered necessary by the two Governments. Meetings normally alternate between Canada and the United States with the host country providing the chairman.

Liaison Abroad.—The Chairman of the Chiefs of Staff, who is the Canadian military representative in the North Atlantic Treaty Organization, is responsible for co-ordinating all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Joint Staff (London) representing the three Services and the Defence Research Board in the United Kingdom, the chairman of which is the principal military adviser to the Canadian High Commissioner in London, the principal military adviser to the Permanent Canadian Delegate to the NATO Council and the Canadian National Military Representative to SHAPE; (2) the Canadian Joint Staff (Washington) representing the three Services and the Defence Research Board in the United States, the chairman of which is the principal military adviser to the Canadian Ambassador in Washington, the Canadian National Liaison Representative to SACLAN'T Headquarters and the Canadian member of the NATO Military Committee in Permanent Session; and (3) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence.

Mutual Aid.—Canada's contributions to NATO are outlined on pp. 168-169.

Rates of Pay and Allowances.—The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates for pay and allowances effective Oct. 1, 1960 are given in Table 1.

1.—Monthly Rates of Pay and Allowances for the Canadian Armed Forces, Effective Oct. 1, 1960

¹ Depending on rank on promotion.

The allowances shown in Table 1 are explained briefly as follows.

Subsistence Allowance.—This allowance is granted whenever rations and quarters are not provided. A married man living with his family uses his subsistence allowance for their maintenance as well as his own.

Ration Allowance.—A ration allowance is granted when quarters are available but rations are not provided. It is not payable concurrently with subsistence allowance.

Marriage Allowance.—The amount of this allowance is \$30 a month for men and \$40 a month for officers, subject to a reduction of \$10 a month where permanent married quarters are occupied or \$2.50 a month where temporary married quarters are occupied. All ranks may draw this allowance upon marriage provided the initial training period has been completed and the age of 21 years has been attained by men and 23 years by officers.

Separated Family's Allowance.—An officer or man in receipt of marriage allowance, while separated from his dependants for any of various reasons (*i.e.*, movement of dependants prohibited, illness of dependants, lack of suitable accommodation), on being moved other than temporarily may be entitled to separated family's allowance at a rate and for a period depending on circumstances (*i.e.*, rank, reason for separation, whether or not he has children, whether or not his family is accommodated in married quarters, whether or not he is provided with quarters and rations). The rates listed are the maximum.

In addition to the above, *Foreign Allowances* are granted to officers and men posted for duty to a country outside Canada to compensate for additional living expenses incurred; these vary with rank, appointment and location. *Isolation Allowances* are granted to officers and men serving at specified isolated posts in Canada at rates depending upon location and circumstances. *Outfit Allowances and Clothing Credits* are as follows: Officers receive a single payment of \$450 on appointment and Warrant Officers Class I, \$270; men receive a free issue of clothing when they join and thereafter a monthly clothing credit or allowance of \$7, Navy Petty Officer 1st class and above \$9, and women \$8. An *Aircrew Allowance* of \$75 a month is paid to an officer or man undergoing flying training. For qualified aircrew this allowance may be increased to \$150, depending on rank, if filling an appointment requiring active and continuous flying duties and to \$100, depending on rank, for maintaining proficiency. *Submarine Allowance* is granted an officer or man undergoing submarine training or filling an appointment in a submarine; the allowance varies from \$65 to \$115 a month depending on rank. An officer or man actively engaged or undergoing training as a parachutist or on flying or submarine duty and not entitled to aircrew allowance or submarine allowance is paid a *Risk Allowance* at the rate of \$30 a month. *Medical and Dental Officers* are granted extra allowances according to rank.

Subsection 1.—The Royal Canadian Navy

Role and Organization.—The role of the Royal Canadian Navy is to defend Canada and to contribute to the collective defence of the NATO area against attack from the sea. In addition, the RCN may be required to assist in the support of the United Nations, as directed by the Canadian Government. To meet its role, the RCN maintains, in a state of readiness, an effective force of anti-submarine ships and aircraft with up-to-date equipment and logistic support.

The Royal Canadian Navy comes under the central authority of the Chief of Naval Staff at Naval Headquarters in Ottawa. The Flag Officer Atlantic Coast, at Halifax, N.S., and the Flag Officer Pacific Coast, at Esquimalt, B.C., exercise operational and administrative command of ships and establishments within the Atlantic and Pacific Coast Commands. The Flag Officers also hold the additional appointments of Maritime Commander Atlantic and Maritime Commander Pacific, respectively. As such, each is responsible for anti-submarine operations involving RCN and RCAF forces in his Command. The 21 Naval Divisions of the RCN(Reserve) come under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton, Ont. There are

naval missions in London, England, and Washington, U.S.A., to maintain liaison with the Royal Navy and the United States Navy. As a result of Canada's NATO commitments (see pp. 168-169), officers of the Royal Canadian Navy serve on the staffs of: the Supreme Allied Commander, Atlantic, at Norfolk, Va., in the United States; the Commander-in-Chief, Eastern Atlantic Area, at Northwood in the United Kingdom; and the Commander-in-Chief, Western Atlantic Area, at Norfolk, Va. The Flag Officer Atlantic Coast holds the NATO appointment of Commander, Canadian Atlantic Sub-Area.

The strength of the RCN at Mar. 31, 1960 was 20,675 officers and men in the Regular Force and 3,311 in the Reserve Force.

Operations at Sea, 1959-60.—The Royal Canadian Navy now has more ships and men at sea than at any other period in peacetime; 49 p.c. of the officers and men of the RCN serve at sea, one of the highest sea-shore ratios of any navy.

At the beginning of 1960 the RCN had 62 warships in commission and two Royal Navy submarines under its operational control. The fleet included the aircraft carrier *Bonaventure*, seven St. Laurent and seven Restigouche class destroyer escorts, 11 older destroyer escorts, 18 frigates, ten minesweepers, two mobile repair ships and six smaller craft.

In the Atlantic, RCN ships and aircraft took part in several exercises with units of other NATO navies; while in the Pacific, Canadian destroyer escorts practised with units of the U.S. Navy.

Ships of the Royal Canadian Navy on training cruises visited Bermuda, southern United States, Trinidad, Hawaii, Japan, Hong Kong, Okinawa, Galapagos Islands, Chile, Peru, Puerto Rico, Panama Canal Zone, the West Indies, Fiji Islands and Samoa.

Training.—The major shore training establishments are HMCS *Stadacona* at Halifax, N.S., HMCS *Naden* at Esquimalt, B.C., HMCS *Cornwallis* near Digby, N.S., HMCS *Shearwater* near Dartmouth, N.S., HMCS *Hochelaga* near Montreal, Que., HMCS *Gloucester* near Ottawa, and HMCS *D'Iberville* at Quebec City.

Facilities at *Stadacona* and *Naden* include schools for general and specialized training, drafting depots, hospitals and accommodation facilities necessary for the support of the ships based on each coast. The Naval Technical School, which was commissioned in 1958 in *Naden*, continues to provide naval technical apprentices of the engineering and hull technician trades with intensive training from basic to advanced level.

New-entry or re-entry training, 15 weeks in duration, is conducted at the basic training establishment *Cornwallis*. A total of 2,813 men and women, including apprentices, took basic training during 1959. The new-entry training establishment *D'Iberville* gives all French-speaking new-entry personnel a basic course in English and preliminary training in seamanship and other professional naval subjects. After completing the course at *D'Iberville*, these new entries join classes at *Cornwallis*.

Trade and specialist supply training is conducted in *Hochelaga*. Also at this establishment management and logistic courses are conducted for both officers and civilian personnel. Communications training is carried out in *Cornwallis* and *Gloucester*.

Under the Regular Officer Training Plan, 33 cadets who graduated from Royal Military College or Canadian universities were promoted to Sub-lieutenant in 1959. Of those graduating from RMC, 17 continued to university for a final year in engineering. Thirty-three Sub-lieutenants from the ROTP joined the fleet in 1959, including 17 officers who had attended university for one year after having graduated from RMC. In August 1959 there were 176 naval cadets in training under the ROTP and 11 under the College Training Plan.

Under the HMCS *Venture* plan, introduced in 1954, young men are enrolled as cadets and their term of service in the RCN is seven years unless they are granted a permanent commission. In August 1959 there were 84 cadets under training in *Venture* including six Belgian cadets. Thirty-five cadets were promoted after graduation to Acting Sub-lieutenant. Of these, 14 continued to pilot training with the RCAF to obtain their wings before receiving advanced flying training with the RCN; 21 went to technical courses in *Stadacona* to prepare for employment as surface officers. A University Naval Training Division program is conducted to give instruction to university students, with the object of providing well-trained junior officers for the RCN and the RCN(R). The training period is three years and cadets are required to complete three winter-training periods, two summer periods and certain specified courses. Promotion to Acting Sub-lieutenant or to Sub-lieutenant is dependent on academic status. In July 1959 there were 575 UNTD cadets in attendance at 26 Canadian universities and colleges. Of these, 513 cadets had received training during the summer in ships and shore establishments of the RCN.

Royal Canadian Navy (Reserve).—The recruiting and training of officers and men of the Royal Canadian Navy (Reserve) is conducted mainly through 21 Naval Divisions across Canada under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton, Ont. Naval Divisions are established in the following centres:—

St. John's, Nfld., HMCS *Cabot*
 Charlottetown, P.E.I., HMCS *Queen Charlotte*
 Halifax, N.S., HMCS *Scotian*
 Saint John, N.B., HMCS *Brunswick*
 Quebec, Que., HMCS *Montcalm*
 Montreal, Que., HMCS *Donnacona*
 Toronto, Ont., HMCS *York*
 Ottawa, Ont., HMCS *Carleton*
 Kingston, Ont., HMCS *Cataragui*
 Hamilton, Ont., HMCS *Star*
 Windsor, Ont., HMCS *Hunter*

London, Ont., HMCS *Prevost*
 Port Arthur, Ont., HMCS *Griffon*
 Winnipeg, Man., HMCS *Chippawa*
 Regina, Sask., HMCS *Queen*
 Saskatoon, Sask., HMCS *Unicorn*
 Calgary, Alta., HMCS *Tecumseh*
 Edmonton, Alta., HMCS *Nonsuch*
 Vancouver, B.C., HMCS *Discovery*
 Victoria, B.C., HMCS *Malahat*
 Prince Rupert, B.C., HMCS *Chatham*.

Naval Divisions, commanded by Reserve officers, provide both basic and specialized training for officers and men of the RCN(R). The Great Lakes Training Centre at Hamilton conducts new-entry reserve training afloat during the summer months.

Royal Canadian Sea Cadets.—Royal Canadian Sea Cadets, sponsored by the Navy League of Canada and supervised by the RCN, consisted of 160 authorized corps in 1959. These were divided into seven Sea Cadet areas, supervised by 16 naval officers, responsible to the Commanding Officer Naval Divisions. Instruction is carried out by RCSC officers. Two RCSC training establishments—*Acadia* on the East Coast and *Quadra* on the West Coast—accommodated a total of 3,300 officers and cadets for two-week training periods in 1959. In addition Sea Cadets received eight-week training courses at the two establishments. Sea experience was provided for Cadets throughout the year in various types of ships of the RCN. The strength of the corps at the end of 1959 was 1,130 Sea Cadet officers and 9,960 Sea Cadets.

Subsection 2.—The Canadian Army

Organization.—Army Headquarters at Ottawa is organized into three separate branches. The General Staff Branch deals with all matters affecting the fighting efficiency of the Army, the Adjutant-General Branch deals with all problems affecting the soldier as an individual, and the Quartermaster-General Branch is responsible for supply. The senior appointment at Army Headquarters is the Chief of the General Staff who, through the Heads of the three Branches, directs all activities of the Canadian Army. For command

and control, Canada is divided into Commands and Areas each with its own headquarters divided into the same three branches as Army Headquarters. Locations of these headquarters are as follows:—

<u>Command</u>	<u>Headquarters</u>	<u>Area and Headquarters</u>
Western Command.....	Edmonton, Alta.....	(1) British Columbia Area, Vancouver, B.C.
		(2) Alberta Area, Edmonton, Alta.
		(3) Saskatchewan Area, Regina, Sask.
		(4) Manitoba Area, Winnipeg, Man.
Central Command.....	Oakville, Ont.....	(5) Western Ontario Area, London, Ont.
		(6) Central Ontario Area, Oakville, Ont.
		(7) Eastern Ontario Area, Kingston, Ont.
Quebec Command.....	Montreal, Que.....	(8) Eastern Quebec Area, Quebec, Que.
Eastern Command.....	Halifax, N.S.....	(9) New Brunswick Area, Fredericton, N.B.
		(10) Newfoundland Area, St. John's, Nfld.

The Canadian Army comprises the Canadian Army (Regular) and the Reserves. The Canadian Army (Regular) consists of four Infantry Brigade Groups and static units and installations for command and control. One of the Brigade Groups is in Europe with the NATO Force and is under command of the Supreme Allied Commander in Europe. The Reserves include the Canadian Army (Militia), the Regular Reserve, the Supplementary Reserve, the Canadian Officers' Training Corps, the Cadet Services of Canada and the Reserve Militia. Additional to but not an integral part of the Canadian Army are the Services Colleges, officially authorized cadet corps, rifle associations and clubs.

The strength of the Canadian Army (Regular) at Mar. 31, 1960 was 47,185 officers and men and the strength of the Canadian Army (Militia) was 40,010.

Operations in 1959.—In fulfilment of military obligations under the North Atlantic Treaty, Canada has continued to provide ground forces for the defence of Western Europe. The 4th Canadian Infantry Brigade Group, which consists of the 1st Regiment Royal Canadian Horse Artillery, the 8th Canadian Hussars (Princess Louise's), the 1st Battalion The Canadian Guards, the 2nd Battalion The Queen's Own Rifles of Canada, and the 1st Battalion The Black Watch (Royal Highland Regiment) of Canada, constituted the Canadian Army contribution to NATO at the end of the year. The Headquarters of the Brigade Group is at Soest, and married quarters for officers and men are located in the vicinity of Soest, Werl, Hemer and Iserlohn.

The Canadian Army continued to make a major contribution of approximately 870 officers and men to the United Nations Emergency Force in the Middle East. Their task is the patrolling of a sector of the Egypt-Israel Armistice Demarcation Line and the provision of communication, supply, transport, and workshop services to the Force. Canadian Army contributions to United Nations armistice commissions included 27 officers employed in Kashmir, Palestine and Korea.

As a result of Canadian membership in the International Supervisory Commissions of Viet Nam and Cambodia, the Canadian Army continued to provide approximately 65 officers and men for truce supervisory duties in Indo China.

The Army in 1959 assumed certain responsibilities for national survival including warning, nuclear detonation and fallout reporting, control of re-entry operations into damaged areas and areas subjected to heavy fallout and emergency communications.

Canada, as a member of the United Nations, may be called on to provide, at short notice, military forces for service in support of the United Nations. An infantry battalion has been specially trained and equipped for operations of this nature in any part of the world.

Training.—The policy of training is determined at Army Headquarters. General Officers Commanding Commands implement the training policies within their Commands, except for those conducted at Army and corps schools that are under the direct supervision of Army Headquarters. During 1959 the basic training of 3,320 recruits and the corps training of officers and men of the Canadian Army (Regular) were carried out at regimental depots, units and corps schools, and 5,979 personnel attended courses at the schools of instruction. Promotion qualification examinations consisting of written and practical tests were held to qualify Regular and Militia officers for the ranks of Captain and Major; 34 candidates passed qualification examinations for selection to attend the Canadian Army Staff College and 30 passed the entrance examination for the Royal Military College of Science. A training program was conducted during the winter months for all Regular officers to further their professional knowledge. Militia Staff Course examinations were conducted for Militia officers to qualify Captains and Majors for command and staff appointments. Qualifying courses for Junior NCO's were conducted under General Officers Commanding Commands. Senior NCO courses were conducted at corps schools in accordance with training standards.

French- and English-language training, which is available to all ranks of the Canadian Army, was conducted by Commands and AHQ. The Canadian Army Training School conducted six-month French-language courses for English-speaking officers and NCO instructors. A number of French-speaking potential NCO's also received English-language training.

Officers from the RCN and RCAF as well as officers from the United States, the United Kingdom, Australia, Pakistan, India, Germany, Belgium, Turkey, Norway, France and Italy attended courses at Canadian Army schools of instruction.

Trade and specialty training is given at corps schools and units. Where feasible, the facilities of civilian schools are used to supplement training at Army establishments. Training is conducted in accordance with the appropriate training standard for each trade or specialty. When required by technical developments in the Army, trades are revised and new trades are introduced. Trades relating to aircraft maintenance and repair are being studied in keeping with the decision that the Army will use certain aircraft.

The apprentice training program inaugurated in September 1952 is designed to train selected young men as soldier tradesmen and to give them a background for advancement to senior non-commissioned ranks in the Army. A high entry standard has been set to ensure that the prospective soldier apprentice will be capable of absorbing trade and academic training and also of developing the leadership qualities essential in senior NCO's. During 1959 an additional 498 apprentices were enrolled and 42 civilian teachers were employed to provide academic instruction for about 864 apprentice soldiers. Academic credits are obtained from the educational authorities of the province where the training is conducted. Apprentices receive trades training as clerks, cooks, carpenters, electricians, wireless operators, radar operators, radio mechanics, storemen, gun mechanics, vehicle mechanics and armourers. A balanced training program is designed to stimulate the interest of the apprentice. Military, trade, academic and recreational training are integrated. Separate messing, canteen and sleeping arrangements are provided for apprentices.

The training of the Defence of Canada Force continued throughout 1959. Airborne continuation training was carried out by each unit in conjunction with unit exercises. Defence of Canada Force units carried out exercises during the winter under cold weather conditions. Parachute and air supply courses were conducted at the Canadian Joint Training Centre at Rivers, Man., and courses in Arctic training at Fort Churchill, Man. Collective training for units in Canada was carried on during the summer months at Camp Gagetown, Camp Petawawa and Camp Wainwright. All arms training comprised sub-unit and unit training and culminated in exercises at the Brigade Group level.

The Reserves.—Funds were provided to permit an average of 45 days of training for all ranks of the Militia during 1959, including seven days of summer training by attachment to Regular Army units, camps or headquarters. During the summer, 10,989 all ranks, including Canadian Women's Army Corps members and Young Soldiers, were attached for summer training, intended to prepare the Militia for assistance in National Survival.

The Regular Officer Training Plan (ROTP).—The Regular Officer Training Plan is in effect at the three Canadian Services Colleges and at all Canadian universities and affiliated colleges that have contingents of the COTC. The purpose of the Plan is to train selected students for commissions in the Canadian Army (Regular). Students enrol in the Canadian Army (Regular) with a special rate of pay; tuition and essential fees are paid and grants are given for books and instruments needed for study. During the year ended Mar. 31, 1960, 88 of these sponsored students graduated and were commissioned in the Canadian Army (Regular). Training consists of military studies, drill and physical training during the academic year; the summer term is devoted to practical training at military establishments.

The Canadian Officers' Training Corps (COTC).—In addition to the Regular Officer Training Plan, units of the Canadian Officers' Training Corps are maintained at Canadian universities to produce primarily, from among university undergraduates, officers for the reserve components of the Army. University graduates who have been members of the Canadian Officers' Training Corps are also eligible for commissions in the Canadian Army (Regular). Members of the COTC undertake the same training as members of the ROTP. During the year ended Mar. 31, 1960, seven who had trained with the COTC were awarded commissions in the Canadian Army (Regular).

Army Cadets.—As at Mar. 31, 1960, the program for Royal Canadian Army Cadets involved 2,201 Cadet Services of Canada officers and civilian instructors and 65,289 cadets in 494 corps. In 1959, a total of 5,026 selected cadets attended trades and specialist summer camps of seven weeks duration at Aldershot, N.S., Farnham, Que., Ipperwash and Camp Borden, Ont., Dundurn, Sask., and Vernon, B.C.; 508 cadets attended two-week Junior Leader camps at Aldershot and Clear Lake, Man. The National Cadet Camp at Banff, Alta., was conducted for 235 Master or First Class cadets. A total of 743 Cadet Services of Canada officers and civilian instructors were employed at or attended cadet camps under instruction.

Subsection 3.—The Royal Canadian Air Force

Organization.—The RCAF is controlled from Air Force Headquarters at Ottawa, which is responsible for planning, policy and administration of the Regular and Reserve components of the RCAF. The Headquarters organization comprises four major Divisions—plans and operations, technical services, personnel and resource control. On Mar. 31, 1960 the major RCAF formations and their Headquarters locations were as follows:—

<i>Formations</i>	<i>Headquarters</i>
Air Defence Command.....	St. Hubert, Que.
5 Air Division.....	Vancouver, B.C.
1 Air Division.....	Metz, France
Air Transport Command.....	Trenton, Ont.
Air Materiel Command.....	Rockcliffe, Ont.
Maritime Air Command.....	Halifax, N.S.
Training Command.....	Winnipeg, Man.

The organization included 29 flying squadrons of the RCAF Regular and 11 flying squadrons of the Reserve. The Reserve squadrons performed an emergency and rescue role. Nine of the Regular squadrons contributed to the air defence of the Canada-United States region; 12 squadrons were assigned to the air defence of Western Europe; four squadrons were required for RCAF transport operations at home and abroad; three maritime squadrons operated in conjunction with other forces for the defence of Canada's East and West Coasts; and one reconnaissance squadron carried out aerial photography and reconnaissance in the Canadian North.

The strength of the Royal Canadian Air Force at Mar. 31, 1960 was 51,737 officers and men in the Regular Force and 3,792 in the Auxiliary Air Force.

Operations in 1959.—The RCAF continued to fill its air defence commitments, improve the effectiveness of its air defence squadrons and emphasize defence integration with the USAF under NORAD. The Canadian air defence force remained at nine squadrons of *CF-100 MK V* aircraft. No. 1 Air Division in Europe, comprised of eight *F-86*, four *CF-100 MK IVB* and one *AC and W* squadrons, continued to fill Canada's commitment to the NATO air defence fighter force.

Air Defence Command continued its planned build-up and had under operation three radar systems—the Distant Early Warning Line (DEW), the Mid-Canada Line (MCL), and the Pinetree Line—as an integral part of North American Air Defence Command (NORAD). The southern portion of the Ground Observer Corps was disbanded effective June 1, 1960. The northern portion continued operations as a supplement to the early warning radar system.

The program of re-equipping Maritime Air Command squadrons with improved aircraft and equipment continued throughout the year. On the East Coast a second squadron was converted to *Argus* aircraft, the largest and most modern anti-submarine aircraft in operational use. The maritime force, consisting of two *Argus* squadrons on the East Coast and a *Neptune* squadron on the West Coast, participated in a number of national and NATO exercises. Daily patrols and surveillance over the ocean areas on both coasts were conducted throughout the year.

Air Transport Command continued to provide support to the Air Division and the Army Brigade in Europe using *North Star* aircraft. *North Stars* were also used to support the United Nations Emergency Force in Egypt. A flying unit, operating *Dakota* and *Otter* aircraft, was maintained for local employment in Egypt in support of UNEF. *Fairchild C-119* aircraft of Transport Command were engaged in cargo and personnel carrier operations in Canada and in paratroop training for the Canadian Army. Both *North Star* and *C-119* aircraft were used for operations in support of the Arctic weather stations. Routine reconnaissance flights in the Arctic Archipelago and photographic missions for the Department of National Defence were carried out by 408 Squadron.

During the year, the RCAF continued to provide Search and Rescue services in Canadian areas of responsibility. Forty-two major search operations were conducted, of which 27 were for civil aircraft and four were for military aircraft. Marine craft and miscellaneous cases accounted for the remainder. During the year, 152 mercy flights were performed. The total flying time for all search and rescue operations was 5,527 hours.

Training.—During the year ended Mar. 31, 1960, the last of the aircrew trainees accepted under the NATO training plan and the agreement with the Government of Germany completed their training in Canada. Aside from providing aircrew training to meet its own requirements, the RCAF provided training to Wings standard for a limited number of aircrew trainees of the air forces of the Netherlands, Norway and Denmark under bilateral agreements with the governments of those countries. Advanced flying training was also provided to a small number of pilots of the Turkish Air Force and the German Air Force.

Aircrew trainees entering the Service receive primary training at Centralia, Ont., and pilot trainees receive basic flying training at Moose Jaw, Sask., and Penhold, Alta. Advanced flying training on jet aircraft is conducted at Portage la Prairie and Gimli in Manitoba and advanced flying training on twin-engine aircraft is conducted at Saskatoon, Sask. Both the basic and applied phases of training for Observer trainees are conducted at Winnipeg, Man. Flying Instructor training is conducted at Moose Jaw, Sask., and Portage la Prairie, Man.

Formal trade courses for tradesmen and technicians and newly commissioned non-flying list officers in aeronautical engineering, armament, supply, telecommunications and flying control were conducted at the RCAF technical schools in Ontario located at Camp Borden, Aylmer and Clinton. Aircraft system trainers were used extensively to support technician and aircrew training programs at field technical training units and operational training units. Trade advancement training programs continued at all units, both regular and auxiliary, to help tradesmen advance into the qualified trade group levels. Semi-annual trade examinations were written under the direction of a Central Examination Board. Language training programs were conducted where necessary.

RCAF Reserve.—The active sub-components of the RCAF reserves are designated as the Auxiliary and the Primary Reserve. Eleven Auxiliary flying squadrons, equipped with transport aircraft, are maintained to train a reserve of transport aircrew and operate in an emergency transport role. In addition, the RCAF maintains 13 Auxiliary medical units, 14 aircraft control and warning squadrons and eight technical training units. The Primary Reserve is concerned mainly with the training of members of the University Reserve Training Plan (URTP), the Manning Support Officers (MSO) and the Reserve Tradesmen Training Plan (RTTP).

During the year ended Mar. 31, 1960, officer development courses were conducted for some 300 first-year URTP university undergraduates at Reserve Officer School, St. Johns, Que. Following this initial training some non-flying list cadets continued with basic courses in aeronautical engineering, telecommunications, armament, supply and accounts while others in the medical, air services and personnel lists were employed at Regular Force units on contact training. Second and third year flight cadets continued with their formal or contact training. The Reserve Tradesmen Training Plan was also continued with an annual intake quota of 1,750.

Royal Canadian Air Cadets.—Air cadet activities in Canada are sponsored and administered by the Air Cadet League of Canada. The League is a voluntary civilian organization formed in 1940 to provide preliminary aviation training for potential members of the Royal Canadian Air Force. The peacetime objective of air cadet training is to give basic training in aviation and other closely associated subjects as well as citizenship training which will better fit Canadian youth for careers in civilian or Service life. The RCAF works in partnership with the League and provides training personnel, syllabi and equipment.

The authorized ceiling of cadet enrolment is 25,500 and the strength at Jan. 31, 1960 was approximately 24,250, attached to 331 squadrons across Canada. Air cadet training is carried out in more than 270 communities from Newfoundland to British Columbia. During the summer of 1959, camps were held at RCAF Stations at Summerside, P.E.I., St. Johns, Que., Clinton, Ont., and Sea Island, B.C., attended by about 6,000 cadets together with officers and instructors. A seven-week course for senior leaders and drill instructors was held for 200 cadets at RCAF Station, Camp Borden, Ont.

Under the International Exchange Visits Program for 1959, sponsored jointly by the RCAF and the Air Cadet League, 58 cadets were exchanged with the United Kingdom, the United States, Denmark, the Netherlands, Norway and Sweden.

About 250 senior air cadets receive flying training annually at flying clubs through scholarships provided by the RCAF and additional scholarships are awarded by the Air Cadet League and other organizations, which in 1959 numbered 138.

Subsection 4.—The Defence Research Board

The Defence Research Board was established on Apr. 1, 1947 by an amendment to the National Defence Act. The Board consists of a full-time chairman and vice-chairman, five ex officio members and nine other appointed members. The ex officio members are the Chiefs of Staff of the three Armed Services, the Deputy Minister of National Defence and the President of the National Research Council. The other members, appointed by the Governor in Council for three-year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of headquarters staff, an operational research group and nine field research stations, and liaison offices at London, England, and Washington, U.S.A. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Board by their consideration of a variety of problems.

The Government, realizing the vital need for continuity in research, planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council. Thus the Defence Research Board has been described as a fourth Service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. The Board's policy is to select and concentrate its efforts upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as the National Research Council are used wherever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest. From the policy of specialization it follows that close collaboration must be maintained with Canada's larger partners. Specialization is made possible only through the willingness of the United Kingdom and the United States to exchange the results of their broader programs for the less numerous but none the less valuable benefits of Canadian research.

The activities of the Defence Research Board are concerned primarily with maritime warfare, armament, telecommunications, Arctic, special weapons, operational, medical, aeronautical and materials research problems of specific interest to Canadian defence. To conduct this program of research, the Defence Research Board operates nine specialized research and development establishments and, in addition, organizes and supports research on problems of defence interest in universities and other agencies.

Research on maritime warfare problems is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. The principal emphasis at each station is on problems related to submarine detection and tracking.

Research and development of weapons and armament is undertaken by the Defence Research Board in co-operation with the Armed Services at various establishments. The largest of these is the Canadian Armament Research and Development Establishment near Valcartier, Que. Its principal activities include research and development and testing of new and improved weapons.

Research on telecommunications is carried out at the Defence Research Telecommunications Establishment. This establishment is concerned mainly with problems of communication and air navigation and supports these with considerable effort in basic research in the fields of radio propagation and electronics components.

Research dealing with problems in Arctic operations is conducted at the Defence Research Northern Laboratory, Fort Churchill, Man. This Laboratory has given valuable support in the instrumentation of rockets fired from the rocket range located at this station.

Special weapons is the generic term used to cover research on the defensive aspects of chemical, biological and atomic weapons. This work is carried out at three Defence Research Board establishments—the Defence Research Chemical Laboratories at Ottawa, Ont., the Suffield Experimental Station at Ralston, Alta., and the Defence Research Kingston Laboratory at Barriefield, Ont.

Military, psychological, clothing and food research is carried out intramurally at the Defence Research Medical Laboratories near Toronto and extramurally in Canadian universities by means of a grant-in-aid program. An important field of activity is aviation medicine but investigations include naval and army problems as well as studies on blood substitutes, infection and immunity, burns and wounds, the effects of noise on hearing, and other factors likely to affect a military man's efficiency and health.

Most of the basic aeronautical research program is also carried out extramurally in Canadian universities and in Canadian industry. The principal fields covered are aerodynamics, aircraft propulsion, and engineering materials.

Operational research is carried on in the Defence Research Board by a Headquarters group. This group conducts long-range scientific analyses of future defence problems; it is also responsible for computational work on behalf of other operational research sections in cases where the use of digital computational equipment is required. In addition to this group, trained operational research scientists are provided by the Defence Research Board to the operational research teams in the three Armed Services, and also to a fourth outside group known as the Defence Systems Analysis Group which undertakes, for the Chiefs of Staff Committee, analytical studies of those defence problems that lie beyond the executive responsibility of an individual Chief of Staff.

In all, the Board continues to support those fields of research that are of foremost interest to the Canadian Armed Services and the program is under continual review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

Section 2.—Services Colleges and Staff Training Colleges

Canadian Services Colleges.—The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers, and Collège Militaire Royal de Saint-Jean established at St. Johns, Que., primarily to meet the needs of French-speaking cadets. The Royal Military College and Royal Roads were constituted as Canadian Services Colleges in 1948, and Collège Militaire Royal de Saint-Jean was opened in 1952. In 1959 the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character and leadership essential to officers of all three Armed Services. The courses of instruction provided a sound and balanced liberal scientific and military education leading to degrees in Arts and Sciences which are granted by the Royal Military College. The organization and training give cadets the opportunity to command and to exercise judgment.

For cadets entering the Royal Military College and Royal Roads the course is of four years duration. As the third and fourth years of the college course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final two years of the general or engineering courses. For cadets entering Collège Militaire Royal, which gives a preparatory year, the course is of five years duration. Cadets take the preparatory, first and second years at that institution and complete the final two years at the Royal Military College.

The college year is eleven months, divided into three terms: autumn, winter and summer. The months September to May are devoted to academic training supplemented by such military studies as drill and physical training. The summer term, June to mid-August, is spent in practical training at an establishment of the Service in which the cadet is enrolled. Academic requirements for admission to the first year at the Royal Military College and Royal Roads is senior matriculation (or its equivalent) in the following subjects:

English, physics, mathematics (algebra, geometry and trigonometry), chemistry and either history or a language, preferably French. French-speaking candidates having a B.A. degree from a classical college may be accepted directly into the first year at Collège Militaire Royal. For admission to the preparatory year at that institution the academic requirement is junior matriculation (or its equivalent) in English, French, algebra, geometry, physics and chemistry, although consideration is given candidates who do not possess the standing in French. Candidates from the classical colleges require at least sixth-year standing.

To be accepted, a candidate must be single, a Canadian citizen or British subject normally resident in Canada and physically fit in accordance with the medical standards of the Service in which he enrolls. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry. Personal interviews and medical examinations of candidates are carried out by Service Boards located at various centres across Canada. Senior officers representing the Services and a faculty member from the Services Colleges sit on interview boards. The interview boards base their recommendations on the physical and personal qualifications of the candidates; responsibility for final selection rests with a board appointed by the Minister of National Defence.

Since September 1954 virtually all cadets entering the Services Colleges have been required to enrol under the Regular Officer Training Plan. Under this Plan applicants accepted for entry enrol, according to their choice, as naval cadets in the Royal Canadian Navy, as officer cadets in the Canadian Army or as flight cadets in the Royal Canadian Air Force. Costs of tuition, board, lodging, uniforms, books, instruments and other essential fees are borne by the Department of National Defence, and cadets are paid at the rate of \$63 a month. On successfully completing their academic and military training, cadets are granted permanent commissions in the regular force but may, if they so wish, apply for release after three years of service following completion of academic training.

The only cadets now accepted at the Services Colleges in a reserve capacity are those who qualify for Dominion Cadetships, which are awarded by the Government in recognition of a candidate's parent having been killed, died or been severely incapacitated in the service of one of Canada's Armed Forces. A maximum of 15 Cadetships may be awarded in any one year, five in each Service. Each is valued at \$580, which covers first-year fees.

During the 1959-60 academic year, 972 cadets were in attendance at the Services Colleges—431 of them at Royal Military College, 178 at Royal Roads and 363 at Collège Militaire Royal de Saint-Jean. Of the total, 192 were enrolled in the Navy, 365 in the Army and 415 in the Air Force.

Staff Training Colleges.—The Canadian Army Staff College at Kingston, Ont., trains officers for staff appointments in peace and war. The course is 21 months in duration with a student intake every second year. Although most of the student body is composed of Canadian Army officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. The system of instruction is based upon the study of précis and other references, demonstrations and lectures, indoor and outdoor exercises. Most of the work is carried on in syndicates, each under a member of the directing staff. Attention is paid to both individual and team work. Aside from purely military subjects such as the study of modern tactics, the curriculum includes national survival, research and development, world affairs and lectures by prominent guest speakers.

The National Defence College at Kingston, Ont., opened on Jan. 5, 1948, is a senior defence college providing an 11-month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and government departments attend, as well as a few representatives from industry. An extensive lecture course is provided, with lecturers chosen from leaders in various fields in Canada, the United States, the United Kingdom and other countries.

In addition, educational tours and visits to certain parts of Canada, the United States, Europe and the Middle East give students more knowledge of conditions and influences in their own and other countries. The thirteenth course, from September 1959 to July 1960, was attended by students, three from the Royal Canadian Navy, four each from the Canadian Army and Royal Canadian Air Force, two from the Defence Research Board, one from the Department of External Affairs, one each from the Department of National Defence, the Department of Transport, the Department of National Revenue, the Department of Northern Affairs and the Royal Canadian Mounted Police and Atomic Energy Control Board of Canada. In addition, the British-American Oil Company and the Imperial Oil Company each provided one student for the course. Representation on the course from outside Canada included one member each from the Royal Navy, the British Army, the Royal Air Force and the Foreign Office of the United Kingdom, the United States Navy, the United States Army, the United States Air Force and the State Department of the United States.

The Royal Canadian Air Force Staff College at Armour Heights in Toronto, Ont., is a permanent establishment preparing officers for staff appointments in the Air Force. The course affords advanced Service education for officers normally of Wing Commander and Squadron Leader ranks, fitting them for appointments appropriate to their present ranks and preparing them to assume higher appointments. The Directing Staff selected from the Royal Canadian Air Force is augmented by an exchange officer from each of the Royal Canadian Navy, the Canadian Army, and the Royal Air Force. The student body, in addition to Royal Canadian Air Force officers, has eight representatives from the Royal Canadian Navy, and one or two from each of the Canadian Army, the Royal Air Force and the United States Air Force. The objective of the course is to assist the student to think logically and express his ideas with precision both orally and in writing, to know his Service and understand the employment of air forces, to keep abreast of scientific and technical developments that may affect the employment of air forces and to gain a perspective of national and international problems. Lecturers are drawn, when desirable, from industry, the Armed Forces, the diplomatic corps and universities. Instructional visits are made to commercial and military establishments at home and abroad.

PART II.—DEFENCE PRODUCTION*

Under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended), the Department of Defence Production has exclusive authority to procure the goods and services required by the Department of National Defence and the responsibility to ensure that the necessary productive capacity and materials are available to support the defence production program. The Department also buys material for the Civil Defence program and serves as procurement agent for the Canadian Commercial Corporation, a Crown company primarily responsible for the purchase in Canada of defence goods required by other governments and of supplies needed to meet Canadian commitments under the Colombo Plan and other international agreements. Military construction is the prime responsibility of Defence Construction (1951) Limited, a Crown company reporting to Parliament through the Minister of Defence Production.

During 1959 the Department of Defence Production and Defence Construction (1951) Limited placed defence contracts on behalf of the Department of National Defence having a total net value of \$591,556,000. This was a decrease of 19.0 p.c. from the preceding year. (The net value of contracts placed takes account of the value of amendments that increased or decreased existing contracts as well as the value of new contracts issued.) With the exception of electronics and communication equipment, the major defence equipment programs registered decreases in the net value of contracts issued during the year. Contracts and amendments issued in connection with the aircraft program amounted to a net value of \$202,632,000, a decrease of one-third from 1958. This program accounted for 34.3 p.c.

* Prepared by the Economics and Statistics Branch, Department of Defence Production, Ottawa.

of the total net value of contracts placed in 1959, as compared with 41.1 p.c. in the previous year. Contracts having a net value of \$82,300,000 were placed under the electronics and communication equipment program in 1959, an increase of 12.1 p.c. over 1958. Initial commitments for new destroyer escorts accounted for a large portion of the \$25,989,000 in contracts placed for the ships program. Defence construction contracts, totalling \$67,141,000, were at about the same level as in the preceding year.

The value of expenditures on defence procurement and construction amounted to \$673,441,000 in 1959, 11.1 p.c. less than in 1958. Most of the major equipment programs registered declines. Expenditures on the ammunition and explosives program, however, increased by one-third; spending on electronics and communication equipment was almost unchanged. The largest expenditure decrease, some \$95,129,000, occurred in the aircraft program.

Of the total net value of contracts issued during 1959, 92.0 p.c. was placed in Canada as compared with 97.3 p.c. in 1958 and 91.0 p.c. in 1957. The increase in contracts placed abroad in 1959 was accounted for by new commitments in the United States involving royalty and reconfiguration agreements for Canadian production of the *CF-104 Starfighter* and the purchase of a small quantity of *Albatross* rescue aircraft. The proportion of expenditures paid directly to defence contractors in Canada in 1959 was 93.3 p.c. of total payments on defence procurement and construction, about the same as in 1958.

Aircraft.—The termination of production of the *CF-105 Arrow* aircraft and its *Iroquois* jet engine on Feb. 20, 1959, was the first major change in the aircraft program during 1959. Another major change resulted from the Government's decision to replace the *F-86 Sabre* aircraft in use by the Air Division in Europe with the *CF-104 Starfighter* reconnaissance version of the United States *F-104 Starfighter*. By the end of 1959, contracts had been placed with Canadian firms for preliminary activities in connection with production of the airframe and its *J-79-7* turbo jet engine, and licence and reconfiguration agreements had been completed with the United States manufacturers of the *F-104 Starfighter*. Discussions took place with officials of the Government of the Federal Republic of Germany on sharing the reconfiguration costs.

Delivery of the *CP-107 Argus* maritime reconnaissance aircraft and of the carrier-based anti-submarine *CS2F Tracker* aircraft continued on schedule during 1959. The *CC-106*, which is a long-range heavy transport version of the *Argus*, made a successful maiden flight towards the end of the year. Orders for a civilian version of this transport, with a hinged tail to permit straight-in loading, were received by the manufacturer from two United States airlines. Production on the *CC-109* medium-range transport was well under way. The *T-33* jet trainer program was completed during the first half of the year.

Three new programs for the Royal Canadian Air Force were undertaken in 1959. These included *Otter* general-purpose aircraft, *Albatross* search and rescue aircraft, and *H44A* helicopters for medium transport and search and rescue operations. The *Albatross* aircraft were ordered from the United States as the number required was too small for economical production in Canada, but their *R-1820-62* engines are being built in this country.

The production of *Beaver* and *Otter* general-purpose aircraft for the United States was virtually completed in 1959. Some *DHC-4 Caribou* troop transport and cargo aircraft were delivered to the United States Army for evaluation, and one was being produced for the Canadian Army. Production of *Hamilton Standard* propellers for the *CS2F Tracker* continued during the year and an additional quantity was ordered for the *Albatross*.

In the field of flight and navigation instruments, a position and homing indicator was selected by the Royal Canadian Air Force for use in the *CF-104* aircraft. This Canadian-designed instrument was also chosen by the German Air Force for its similar version of the *Starfighter*. Production continued on the navigation and tactical control (ANTAC)

system. A very accurate low-drift gyro was put into production, as was an integrator developed for use in complex systems. Delivery was maintained on the *R-Theta* navigation computer.

Electronics.—The continued production of heavy search and height-finding radars for improvement of Pinetree radar stations of both the Royal Canadian Air Force and the United States Air Force was one of the major items of the electronics and communication equipment program in 1959. An associated item was the air defence communication requirements for the eastern Ontario and southern Quebec portion of the Pinetree line. Fibreglass self-supporting radomes, to replace the original air-inflated radomes and air-pressurizing equipment were produced and installed, and production of selective aircraft identification equipment was initiated for part of the Pinetree line. Ground control approach radars were procured for use at RCAF airfields in Canada.

Consoles for the display of aircraft data at semi-automatic ground environment (SAGE) direction centres in the United States, and devices to provide an alarm signal for targets approaching the Distant Early Warning (DEW) radar line were produced in Canada. Two new types of operators' consoles for SAGE were also in the process of development for the United States Air Force. Contracts were placed for the leasing of communication facilities for both the RCAF and USAF in connection with the Pinetree and SAGE defence systems.

Search and attack sonars were a continuing production item in 1959, and an important addition to this program was the initiation of production of a Canadian-developed towed sonar. A preproduction program for a new type of sonobuoy was initiated, and interest was shown by the United States Navy in proposals to extend the life of the existing sonobuoy. A long-life moored sonobuoy was produced and tested in 1959 and considerable United States interest was also shown in this. Production of radiation monitoring equipment was initiated.

Production continued on ultra high frequency transceivers, identification, *Doppler* navigation, and instrument landing equipments. Procurement in connection with the *CF-104* aircraft program was initiated for the *NASARR* fire control radar, bomb and missile launch computers, optical sight requirements and TACAN navigation. Complex instrument, bombing, flight and anti-submarine tactical simulators were being designed and built in Canada, while a naval tactical trainer and an aircraft simulator were procured in the United Kingdom.

A major change in the responsibility for the operation and maintenance of the Mid-Canada radar line was negotiated and new contractors introduced on a cost incentive bonus plan for the first time in a major maintenance contract.

Shipbuilding.—Five destroyer escorts were completed and delivered in 1959, completing the second program of seven anti-submarine destroyer escorts known as the Restigouche class. Construction of the first of a third group of six destroyer escorts, a repeat of the Restigouche class, continued in the lead yard during the year. A contract was placed with a West Coast shipyard for construction of the hull portion of the second vessel of this class, the fitting-out of which will be done by a second West Coast yard. Contracts were placed for the majority of components for the repeat Restigouche program. Operations commenced at the central procurement agency under the supervision of the Department of Defence Production. This agency procures those items that are worked into all the vessels, allocates them to other shipyards as required, and handles the accounting for such bulk purchases.

Invitations to tender were issued to the Canadian shipbuilding industry for the construction of a naval tanker-supply vessel on a normal commercial fixed price basis. This was the first time that a major naval vessel was procured by this method. An acoustic calibration barge was completed and delivered to the Defence Research Board. There were 54 small boats under construction in 1959, varying in size from 27-foot whalers down to 14-foot dinghies. Forty-seven of these small craft were completed during the year.

Weapons and Ammunition.—Production was completed in 1959 on the third order of 105mm howitzers and on two substantial orders for long-term howitzer spares. Production of anti-submarine torpedoes for the Royal Canadian Navy was also completed but manufacture continued in order to fill a large order of these torpedoes for the Royal Navy. Further deliveries of anti-submarine mortars and of weathershields for 3"/50 calibre guns were made to the Royal Canadian Navy. Shipments of the 7.62mm C-1(FN) rifle, the heavy barrelled automatic version of this weapon, and the 9mm sub-machine gun continued to be made to the Canadian Army. Action was taken to provide for the manufacture of long-term spares for these three weapons while the production lines were still set up. Deliveries of a Canadian-designed artillery director were begun in 1959. A quantity of 3"/70 calibre twin naval guns and mounts for the new destroyer escort program was ordered from the United Kingdom.

Delivery of substantial quantities of ammunition was made to the three Armed Services. In 1959, production was completed on orders for 2.75" rocket heads, 40mm rounds, a variety of small arms ammunition, 81mm, 60mm and 2" mortar bombs, and 3"/50 calibre and 4" cartridges. Production was also completed on an initial requirement for 17" rocket components and 105mm improved performance projectiles for the Defence Research Board. Production continued throughout the year on anti-submarine fuses, practice depth charges, 7.62mm small arms ammunition of all types, several kinds of 105mm, 20 pdr. and naval rounds, 2.75" rockets, and pyrotechnics. Various rockets and 20 pdr. shot were modified to meet Army training needs. Production of a Canadian-designed anti-personnel mine, 20 pdr. target practice rounds, training aids and pyrotechnics was begun. Development was undertaken or planned for anti-tank shot, improved fuses, anti-submarine devices, and screening smoke rounds.

Construction.—Construction activity for the Canadian Armed Forces increased substantially to \$67,723,000 in 1959, as measured by payments to contractors. The largest contracts placed by Defence Construction (1951) Limited were for hangars and other improvements at Trenton, Ont., Greenwood, N.S., and Summerside, P.E.I., and for the paving of part of the Northwest Highway System. Work in connection with construction for the Bomarc missile and SAGE (semi-automatic ground environment) projects for the Royal Canadian Air Force was begun. There was a large amount of construction activity in 1959 for the United States Air Force, primarily on refuelling facilities for the Strategic Air Command and on the Ballistic Missile Early Warning System (BMEWS).

General Purchasing.—The procurement of supplies and services not normally requiring special production facilities increased slightly in 1959 to about \$176,000,000. Material purchased at headquarters included such items as clothing, footwear and leather goods, medical and dental stores, canned foods, petroleum products and hard fuels, electrical equipment and cable, furniture and furnishings, building supplies and hardware, barrack equipment and naval stores, as well as mechanical transport, construction, road maintenance and aircraft ground support equipment, together with their necessary maintenance spares and servicing. Services included aerial surveys, engineering, food catering, and certain research and development projects. In this latter field, contracts were awarded for work in such widely diversified fields as the development of fabrics that will afford protection against nuclear, bacteriological and chemical warfare; the extension of certain research and development programs with Canadian universities; and for further development of a family of light-tracked vehicles known as the Bobcat.

The Canadian Army's new role in civil defence necessitated substantially increased procurement of medical and surgical supplies and equipment, litters, floodlights, generators, ladders and demolition jacks.

The 14 district purchasing offices across Canada continued their essential role of arranging for services required by the defence establishments located in their vicinities, as well as purchasing fresh food and supplies of a local or urgent nature.

Production Sharing.—The defence production-sharing program which was initiated in the autumn of 1953 involves the integration of the defence production capabilities of Canada and the United States to bring about the most economical and efficient development and manufacture of military weapons for the defence of North America. It is an extension of the integration of Canadian and United States measures for continental air defence under the North American Air Defence (NORAD) agreement, and of the growing complexity and cost of modern weapon systems which involve exacting engineering and production capabilities for relatively short production runs.

At the beginning of 1959, production-sharing arrangements were based mainly upon four projects of mutual Canadian-United States interest: the Bomarc anti-aircraft missile, the semi-automatic ground environment (SAGE) control system, heavy radars and gap fillers for the radar lines. Activity during the first half of 1959 was directed primarily toward the development of procedures which were necessary to provide adequate opportunity for Canadian industry to participate in United States defence production. In order to establish equal opportunity for Canadian industry, however, the program was extended beyond the original four projects to cover a wide range of United States defence programs in which Canadian industry could establish its ability to compete with American industry on the basis of technical competence, delivery and price.

On this basis, a broad list of defence programs was jointly developed and specific items were agreed to by each of the three United States military departments for exemption from the Buy American Act through a revision of the Buy American regulations. The United States Armed Forces procurement regulations were amended to provide for these broadened opportunities and to permit duty-free entry from Canada of military hardware ordered by United States defence contractors for production of the items listed by the American military departments.

Revisions were also made to United States security procedures which made it possible for Canadian firms to acquire information on classified United States defence programs on the basis of their security clearance by the Canadian Government. Arrangements were made for the Canadian Government to assist as required in the administration of both United States prime and sub-contracts placed in Canada under the production-sharing program, and procedures were developed to provide for quality control inspection of American defence contracts placed in this country.

By mid-1959, the United States Government had made most of the relaxations and concessions in its military procurement regulations that were considered necessary to provide adequate opportunity for Canadian industry to participate in United States defence production. Then, an intensified effort was initiated in both Canada and the United States to ensure that government defence procurement agencies and defence contractors were familiar with the aims and objectives of defence production sharing and the procedures that had been established.

Every opportunity was taken to bring home to Canadian industry its responsibility to play an aggressive role in establishing its capabilities within the United States. Canadian firms were assisted in making direct contacts with the major United States contractors for programs of a production-sharing nature; and efforts were made to acquaint the United States Government procurement agencies and their prime contractors with the aims and objectives of the production-sharing program and with the procedures established to permit and encourage Canadian participation in that country's defence production.

Assistance was given to Canadian industry in 1959 in order to maintain diversified defence production activity in Canada, primarily in the electronics and aeronautical fields. Normally, the American contractor has an advantage because most of his preproduction and tooling costs have been written off under previous contracts. This assistance was provided to absorb part of the Canadian contractor's preproduction and tooling costs, thus putting him in a more equitable competitive position with United States contractors. Contracts valued at \$856,000 were placed to establish capacity for the production of magnetron tubes and to absorb a portion of the preproduction and tooling costs involved in the manufacture of antennae, power supplies and rigid radomes.

Canadian defence production technology can be maintained at an adequate level only by participating in the development of United States defence weapons systems as well as in sharing in their production. Consequently, emphasis was placed on a program of development-sharing with the United States as an essential component of the production-sharing effort. Development-sharing procedures were evolved to the point where specific procedures and agreed principles of control and management were established with the United States Air Force and the United States Army, and were under discussion with the United States Navy.

Financial assistance was made available to Canadian industry for a long-term defence development program aimed at maintaining and improving its scientific and technical competence so that it will be able to share to a greater extent in future United States defence-production programs. Development projects approved for such assistance in 1959 included a 500-hp. turbine engine, *Caribou* aircraft improvement, a metal frame radome and a *Doppler* navigation aid.

1.—Net Value of Total Canadian Government Defence Contracts Placed and Expenditures on such Contracts, by Program, 1958 and 1959

NOTE.—Includes all contracts placed by the Department of Defence Production and Defence Construction (1951) Limited on behalf of the Department of National Defence. *Net* value includes the value of all new contracts awarded together with the value of amendments issued which increased or decreased the commitments of existing contracts.

PART III.—CIVIL EMERGENCY PLANNING (Civil Defence)

Towards the end of 1958 the Canadian Government initiated a survey of the civil defence situation across the country. The report on this survey was considered in the context of the total military and civilian arrangements necessary to prepare the nation for the possibility of nuclear war. The Government decided, after considering all the relevant factors, to undertake a major rearrangement of federal civil defence functions and to offer to assume directly certain responsibilities previously carried by the provinces and municipalities.

This civil defence reorganization became effective on Sept. 1, 1959. It is based on the two main principles that: civil defence should be considered a function or activity of government rather than an organization as such; and that the civil defence function should be divided into clearly defined tasks and assigned to levels of government, and at each level to those departments and agencies best able to undertake and discharge them.

At the federal level, the reorganization may be summarized briefly as follows:—

- (1) The Emergency Measures Organization is the co-ordinating agency for all civil emergency planning and for all federal/provincial planning. It is responsible for planning for continuity of government, for tasks hitherto grouped under the designation "civil defence" and not now specifically assigned to some other department of government, and for general liaison with the provinces, NATO and foreign countries on matters relating to civil emergency planning.
- (2) The Department of National Defence, more particularly the Army, has been given a primary role in survival operations and has been delegated responsibility for a substantial number of functions that are technical in character such as the complete public warning system, radiation monitoring and fallout prediction, emergency governmental communications, re-entry into damaged areas and support of local authorities in the maintenance of law and order.
- (3) The Department of National Health and Welfare (which formerly had the major responsibility for civil defence) will concentrate its attention mainly on advising and assisting provincial authorities with respect to the provision of emergency health and welfare services. This Department has retained responsibility for the operation and management of the Canadian Civil Defence College at Arrnprior, Ont.
- (4) The Royal Canadian Mounted Police has the responsibility of providing advice and assistance to provinces concerning the preservation of law and order and the control of road traffic under emergency conditions.
- (5) Other federal departments and agencies have duties that relate chiefly to carrying on essential functions or to maintaining the country's economic life under conditions of nuclear attack—the Department of Defence Production, the Department of Agriculture, the Department of Finance, the Bank of Canada, the Department of Transport, the Canadian Broadcasting Corporation and the Department of Labour in consultation with the National Employment Service of the Unemployment Insurance Commission.
- (6) What was known as Federal Civil Defence Headquarters has disappeared.

Certain emergency functions of government are simply a projection of normal peacetime provincial responsibilities, and in these fields the provinces and municipalities have more experience and knowledge of local conditions than has the Federal Government or its agencies. The following are thus considered to be proper wartime responsibilities for the provincial authorities, with such federal assistance as may prove necessary:—

- (1) *Preservation of law and order* and prevention of panic, by the use of their own police, municipal police, and special constables, with whatever support is necessary and feasible from the RCMP and the Armed Services at provincial request.
- (2) *Control of road traffic*, except in areas damaged or covered by heavy fallout, including special measures to assist in the emergency movement of people from areas likely to be attacked or affected by heavy fallout.
- (3) *Reception services*, including arrangements for providing accommodation, emergency feeding and other emergency supplies and welfare services for people who have lost or left their homes or who require assistance because of the breakdown of normal facilities.
- (4) Organization and control of *medical services*, hospitals, and public health measures.
- (5) Maintenance, clearance and repair of *highways*.
- (6) Organization of municipal and other services for the maintenance and repair of *water and sewage systems*.
- (7) Organization of municipal and other *fire-fighting services*, and control over and direction of these services in wartime except in damaged or heavy fallout areas, where fire-fighting services would be under the direction of the Army as part of the re-entry operation.
- (8) Maintenance and repair of *electrical utilities*, and the allocation of the use of electricity to meet emergency requirements.
- (9) *Training of civilians* as civil defence workers.

In outline, the federal civil emergency planning organization consists of: a Cabinet Committee on Emergency Plans to give policy guidance in all areas of civilian emergency planning for war; the Emergency Measures Organization with a headquarters staff at Ottawa and a regional office in each province; and departmental planning staffs.

EMO Regional Officers have been appointed in all ten provinces. Their function is to represent EMO in the provinces, to co-ordinate the emergency planning of federal departments and agencies in the provinces, maintain effective liaison with the provincial governments, the provincial civil defence organization and the appropriate military authorities. The Financial Assistance Programme of the Federal Government has been expanded and provided with greater resources. The Federal Government now pays up to 75 p.c. of the costs of approved provincial and municipal projects.

A booklet entitled *Your Basement Fallout Shelter* was issued by EMO in June 1960 giving instructions for the building of a "do-it-yourself" fallout shelter. Copies may be obtained from the Emergency Measures Organization, Privy Council Office, East Block, Ottawa.

The Government in 1960 announced the formation of the elements of a War Supplies Agency. This Agency, under the Department of Defence Production, will, in time of war, control the distribution and use of essential supplies, their prices and their rationing as required.

Emergency facilities for the Federal Government outside Ottawa now exist and action is under way to provide regional facilities in each of the provinces. The Minister of Transport has announced the formation within his department of an agency to be known as the Emergency National Telecommunications Organization (ENTO). This is a peacetime planning nucleus of a wartime agency to control and administer national telecommunications systems.

A Dominion/Provincial Conference on Civil Defence Arrangements was held at Ottawa in October 1959; the provinces, with one exception, were represented by provincial Cabinet Ministers and three Federal Cabinet Ministers attended. This was a continuation of a previous conference held in April 1959. Matters reviewed and discussed included evacuation and shelter policy, the role of the Army in civil defence, the Financial Assistance Programme, public information, training of civilians, and emergency communications.

Civil emergency planning development and problems within NATO, the United States and the United Kingdom are constantly under discussion and study. A national exercise, under the name of *Exercise Tocsin 1960*, was undertaken in April, the purpose of which was to practice manning of emergency government facilities, to test emergency communications and warning systems and to study problems of post-attack government at federal and provincial levels.

PART 1.—SOURCES OF OFFICIAL INFORMATION

Section 1.—Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds—federal and provincial—is centralized. Information that is not mainly statistical may be secured from the individual department concerned with the particular subject as indicated in the Directory at pp. 1202-1235. Certain government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Trade Publicity Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation, and the National Film Board. The Departments of Agriculture, Northern Affairs and National Resources, and Mines and Technical Surveys, and such agencies as the National Gallery of Canada, the National Museum of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, though several of the latter have publicity branches or public relations divisions.

Government departments, with few exceptions, issue their own lists of reports and publications. Departments are required by statute to publish annual reports, which are tabled each year in the House of Commons by their respective Ministers. However, for the purpose of this Section, only the services of the six information agencies mentioned above are described.

Section 2 has been prepared for the purpose of presenting to the reader a directory of all sources of information, federal and provincial, thereby directing him to the proper channels from which he may draw published material relating to any particular subject.

The Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257), subsequently amended in March 1953 (SC 1953, c. 18).

The chief aims of the Dominion Bureau of Statistics are: (1) to furnish statistical data bearing on Canada for government and administration, whether municipal, provincial, national or international; and (2) to assist in meeting the needs of non-governmental users of statistics, arising from a growing awareness of the value of statistics to business efficiency and social planning.

Inquiries.—Hundreds of individual requests for information are received each day in the Information Services Division of the Bureau, routed through the appropriate divisions and answered as expeditiously as possible. Since the field of effort from the statistical side deals with all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. Nevertheless only inquiries of a statistical nature should be directed to the Dominion Bureau of Statistics.

Publications.—Dominion Bureau of Statistics reports cover all aspects of the national economy; the *Canada Year Book* and *Official Handbook Canada* constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

DBS publications are listed in a catalogue of *Current Publications* and in the Queen's Printer's *Catalogue of Canadian Government Publications*. The *DBS Daily Bulletin* and *Weekly Bulletin*, available from the Bureau's Information Services Division at an annual subscription of \$1.00 each, are designed to serve persons wishing to keep closely informed on the full range of published information issued by the Bureau. Subscription orders for DBS publications or orders for single copies should be addressed to the Information Services Division, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada.

Information Division, Department of External Affairs.—The Information Division has two functions: to promote within Canada interest in and knowledge of international affairs, and to make Canada and Canadian policies better known and understood abroad.

To perform the first function, the Division produces and distributes various documents on external affairs—statements of government policy and reports on related developments abroad and on the work of the Department generally. The Division also answers inquiries from Canadian sources on these subjects as well as requests for information about Canada made by Diplomatic Missions at Ottawa, by Canadian posts abroad, and by individuals and organizations in other countries.

Most of the information work abroad is done, however, by officials at Canadian posts. The Information Division assists by formulating and advising on information policy abroad in an effort to ensure that this policy is related to the general objectives of Canadian foreign policy, and by producing and procuring material to keep Missions informed of developments within Canada. Journalists and others who visit Canada to write of Canadian affairs are given assistance from time to time by the Division; its responsibilities also include the co-ordination of the Government's activities in the field of cultural relations.

Trade Publicity Branch, Department of Trade and Commerce.—For details see pp. 1062-1063.

Information Services Division, Department of National Health and Welfare.—The responsibility of this Division, in co-operation with other Divisions of the Department of National Health and Welfare and provincial authorities, is the production and distribution of educational material on health, welfare and social security, for use throughout

the country. This information, issued in the English and French languages, includes books, pamphlets, periodicals, posters, exhibits, displays, radio dramatizations, press and magazine features and releases, as well as films and film-strips prepared in co-operation with the National Film Board. Books, pamphlets, posters and displays are distributed in Canada through provincial authorities. The most important periodicals published by the Division are *Canada's Health and Welfare* (monthly), *Canadian Nutrition Notes* (monthly), *Occupational Health Bulletin* (monthly), *Industrial Health Review* (semi-annually) and *Nutrition Bulletin* (annually).

Canadian Broadcasting Corporation.—Television and radio broadcasting are important mediums of information to the public along with newspapers, films and other means of communication. Broadcasting in Canada combines, in one national system, publicly owned stations and privately owned local community stations, many of which are affiliated with the Canadian Broadcasting Corporation's networks.

Since its establishment in 1936 the Canadian Broadcasting Corporation has become one of the most effective channels through which information, official and unofficial, is broadcast to the people of Canada. Radio is relatively more important in Canada than in most countries because of the widely distributed population and the number of sparsely peopled areas, and the CBC has gradually bridged the gaps with high-powered transmitters designed to serve rural as well as urban areas. The CBC has also pioneered in the development of low-powered repeater stations attached to the network lines, which serve areas unable, because of topographical conditions, to receive an adequate signal from any existing station.

News broadcasts and information programs occupy a considerable proportion of national and regional network time. All CBC schedules include news, music, drama, informative talks, children's programs, school broadcasts, public service broadcasts, sports, women's activities, etc. There is a very wide range of radio and television fare, since the CBC not only produces its own programs in the various production centres across Canada but brings in selected programs from the networks of the United States, the British Broadcasting Corporation and other national radio and television systems. The CBC maintains a bureau at London, England, and at United Nations Headquarters in New York, and is credited with having done more to inform listeners of United Nations activities than any other broadcasting system.

Through the International Service operated by the CBC on behalf of the Canadian Government, programs are broadcast over shortwave in 16 languages: English, French, German, Dutch, Danish, Norwegian, Swedish, Italian, Spanish, Portuguese, Czech, Slovak, Russian, Ukrainian, Polish and Hungarian. The CBC International Service broadcasts information abroad on life and economic conditions in Canada as part of the general information plan for promoting a better understanding of Canada in other countries. In addition to this regular shortwave program service, the International Service provides special programs for transmission by broadcasting systems in other countries by means of shortwave relays or recordings on tape or disc. A library of musical and spoken-word programs is made available to foreign broadcasting systems through processed transcriptions for wide distribution.

National Film Board.—The National Film Board produces films, film-strips and still photographs on a great variety of subjects. In keeping with its terms of reference, the Board's products are both informative and interpretative, and are widely distributed throughout the world through theatrical and television media and non-theatrical channels.

In Canada, films are seen non-theatrically by the public by means of a distribution network of more than 600 film libraries and voluntary organizations which provide local facilities for community use of films placed in circulation through sales and loans. The Board maintains a preview library of 5,000 prints from many sources; libraries are also maintained containing films on such subjects as health, medicine, sociology and industry for the use of government departments and special-interest groups.

Non-theatrically abroad, the National Film Board provides films and assistance to libraries operated by the Department of External Affairs in 54 Missions, to nine libraries operated in trade posts by the Department of Trade and Commerce, and to diplomatic Missions for use by commercial counsellors. In conjunction with the Canadian Government Travel Bureau, the Board carries out a travel film program to encourage travel in Canada by United States residents by arranging film distribution through 493 outlets in that country and by providing a special library of travel films for television use. Exchange and loan agreements are made with governmental and other organizations in many countries in order to obtain or extend distribution wherever possible. National Film Board offices abroad are located in New York and Chicago in the United States, New Delhi in India, and London, England.

The Board's library of approximately 150,000 still photographs serves government departments, commercial photographers, newspapers, periodicals and many other organizations in Canada and abroad.

Section 2.—Directory of Sources of Official Information (Federal and Provincial)

To make the best use of the Directory of Sources of Government Official Information, it is necessary that the reader understand the broad differences in function between federal and provincial departments and their separate fields of work.

Certain areas of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, census of population and national defence are constitutionally federal affairs and on such subjects the respective departments at Ottawa are the proper sources with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces but certain federal departments are also concerned with specific aspects of these subjects and, as is the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources should be forwarded to the particular provinces concerned. The Government of Canada, while not administering the resources within provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions of forest research, forest fire protection and reforestation offer good examples. Inquiries directed to federal sources for information not of a statistical nature should as a general rule be sent to the individual departments listed in the Directory; inquiries for information of a statistical nature should be addressed to the Information Services Division, Dominion Bureau of Statistics, Ottawa.

Sale of Official Publications.—Under the provisions of the Public Printing and Stationery Act, the Queen's Printer and Controller of Stationery, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them. The Dominion Bureau of Statistics acts as the agent of the Queen's Printer with respect to the sale of DBS publications and issues an annual catalogue entitled *Current Publications*.

The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7 (e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer and Controller of Stationery issues the *Daily Checklist of Government Publications* which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the *Daily Checklist* without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer and Controller of Stationery also issues the *Monthly Catalogue of Canadian Government Publications*, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an *Annual Catalogue* (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

Most provincial government publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:—

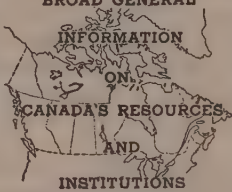

Newfoundland.....	St. John's	Ontario.....	Toronto
Prince Edward Island....	Charlottetown	Manitoba.....	Winnipeg
Nova Scotia.....	Halifax	Saskatchewan.....	Regina
New Brunswick.....	Fredericton	Alberta.....	Edmonton
Quebec.....	Quebec	British Columbia.....	Victoria.

Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

(Detailed Directory of Sources of Official Information follows, pp. 1204-1235.)

DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

NOTE.—In the "Federal Data" column, the major source of information on each subject is given first; other sources follow in alphabetical order, with the exception of the National Film Board and the Dominion Bureau of Statistics which appear at the end of each listing with which they are concerned, except where they are the major source.

PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1960 Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Information Services Division, Dominion Bureau of Statistics.

Subject and Article	Contributor	Edition	Page
Agriculture—			
Prairie Farm Rehabilitation Program.....	WILLIAM DICKSON.	1938	223-230
Historical Background of Canadian Agriculture.....	G. S. H. BARTON, C.M.G., B.S.A., D.Sc.A.	1939	187-190

PART IV.—FEDERAL LEGISLATION, 1960

This classified list of federal legislation has been compiled from the Statutes. Naturally in summarizing material of this kind it is not always possible to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes of Canada in the given volume and chapter.

**Legislation of the Third Session of the Twenty-Fourth Parliament,
Jan. 14, to Aug. 10, 1960**

Subject, Chapter and Date of Assent	Synopsis
8-9 Eliz. II	
Agriculture—	
1 Jan. 28	<i>The Prairie Grain Loans Act</i> provides, by way of a guarantee for bank loans made before June 1, 1960, short-term credit to grain producers of the Prairie Provinces to meet temporary financial difficulties encountered during the 1959-60 crop year from inability to thresh their grain.
2 Jan. 28	<i>The Prairie Grain Provisional Payments Act</i> authorizes the Canadian Wheat Board to make payments for the 1959-60 crop year in respect of future deliveries of unthreshed grain.
14 May 27	<i>The Feeds Act</i> revises the Feeding Stuffs Act (repealed) to meet recent trends and developments in the production and merchandising of feeds. No substantive changes in policy are made in this revised Act.
Finance—	
3 Mar. 9	<i>Appropriation Act No. 1, 1960</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1960.
5 Mar. 31	<i>Appropriation Act No. 2, 1960</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1960.
6 Mar. 31	<i>Appropriation Act No. 3, 1960</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1960.
11 May 27	<i>Appropriation Act No. 4, 1960</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1960.
13 May 27	<i>An Act to amend the Federal-Provincial Tax-Sharing Arrangements Act</i> provides certain alternative arrangements for payment, either by Canada through the Canadian Universities Foundation or directly by a province, of the grants to institutions of higher learning presently paid under the authority of the Appropriation Act.
16 June 9	<i>Appropriation Act No. 5, 1960</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1960.
48 Aug. 10	<i>Appropriation Act No. 6, 1960</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1961 (main supply).
Government—	
7 Mar. 31	<i>An Act to amend the Canada Elections Act</i> grants the franchise to Indians without restriction if they are qualified as other electors.
8 Mar. 31	<i>An Act to amend the Indian Act</i> is a consequential amendment to the Indian Act required upon the passing of the above amendment to the Canada Elections Act which gives to Indians the right to vote in federal elections without restriction if they are qualified as other electors. Both amendments take effect at the same time.
20 June 9	<i>An Act to amend the Northwest Territories Act</i> establishes a Court of Appeal for the Northwest Territories, authorizes the Territorial Court of the Northwest Territories to sit in the Yukon Territory in civil matters, provides for the appointment, remuneration and allowances of deputy judges of the Territorial Court and provides for the general application of game legislation in the Northwest Territories.
24 June 9	<i>An Act to amend the Yukon Act</i> increases the number of members of the Council of the Yukon Territory from five to seven and creates an advisory committee on finance. It establishes a Court of Appeal for the Yukon Territory, authorizes the Territorial Court of the Yukon Territory to sit in the Northwest Territories in civil matters, provides for the appointment, remuneration and allowances of deputy judges of the Territorial Court and provides for the general application of game legislation in the Yukon Territory.
39 Aug. 1	<i>The Canada Elections Act</i> re-enacts legislation respecting the franchise of electors and the election of members of the House of Commons, incorporating therein the amendments recommended by the Standing Committee on Privileges and Elections as presented to Parliament on June 13, 1960, more particularly with respect to advance polls and generally for the purpose of facilitating the administration of the Act. The former Canada Elections Act is repealed.
31 July 7	<i>The International Boundary Commission Act</i> gives legislative authority to the Commission permitting it to carry out more effectively in Canada its functions under the treaty of 1925.

**Legislation of the Third Session of the Twenty-Fourth Parliament,
Jan. 14, to Aug. 10, 1960—continued**

Subject, Chapter and Date of Assent	Synopsis
Government—concl.	
41 Aug. 1	<i>The Department of Forestry Act</i> authorizes the constitution of a Department of Forestry and provides for its management and direction by a Minister of Forestry, the employment of other officials and the transfer of staffs hitherto performing duties in the field of forestry in the Departments of Agriculture and Northern Affairs and National Resources. The Act also provides for the establishment and regulation of forest experimental areas on Crown lands.
44 Aug. 10	<i>The Canadian Bill of Rights</i> is designed to ensure in Canada the recognition and protection of human rights and fundamental freedoms.
4 Mar. 9	<i>An Act to amend the Department of Justice Act</i> authorizes the appointment of two Associate Deputy Ministers of Justice.
37 July 14	<i>An Act to amend the Criminal Code</i> prohibits possession of a Hornet survival rifle and permits evidence at a preliminary inquiry to be taken by sound recording apparatus where such is authorized by provincial legislation for use in civil cases.
45 Aug. 10	<i>An Act to amend the Combines Investigation Act and the Criminal Code</i> makes important revisions that may be classified as: (1) Substantive amendments—relating to conspiracy and unfair trade practices, especially in relation to the operations of small businesses. (2) Procedural amendments—relating to new jurisdiction conferred on the Exchequer Court of Canada; permitting a restraining or dissolution order without a conviction; requiring the Commission to make certain additional specific findings where it appears that a combine has existed; also amendments consolidating the related provisions of the Criminal Code and the Combines Investigation Act. (3) Consequential amendments—particularly re-statement of definitions made necessary as a result of consolidation of legislation and amendments dealing with changes in cross-references.
46 Aug. 10	<i>An Act to amend the Judges Act</i> authorizes salaries for four additional judges of the Quebec Superior Court; provides for the grant of an annuity to judges of provincial courts who, in accordance with the proposed amendment to the BNA Act, will cease to hold office upon attaining the age of 75 years; removes anomalies in the law relating to the grant of annuities to judges and their widows; and alters the method of payment of travelling allowances to judges.
47 Aug. 10	<i>An Act to amend the Judges Act</i> authorizes salary for one additional judge of the Supreme Court of Judicature of Prince Edward Island.
Revenue—	
18 June 9	<i>An Act to amend the Canada-Netherlands Income Tax Agreement Act, 1957</i> implements the Supplementary Convention entered into between Canada and the Netherlands modifying the Convention between Canada and the Kingdom of the Netherlands for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income, signed at Ottawa Apr. 2, 1957.
27 July 7	<i>An Act to amend the Customs Tariff</i> implements Budget Resolutions on the Customs Tariff.
29 July 7	<i>An Act to amend the Estate Tax Act</i> implements Budget Resolutions on the Estate Tax Act.
30 July 7	<i>An Act to amend the Excise Tax Act</i> implements Budget Resolutions on the Excise Tax Act.
43 Aug. 1	<i>An Act to amend the Income Tax Act</i> implements Budget Resolutions on the Income Tax Act.
Trade—	
12 May 27	<i>An Act to amend the Export and Import Permits Act</i> extends the provisions of the Act for a further period of three years, to July 31, 1963.
17 June 9	<i>The Australian Trade Agreement Act, 1960</i> implements the Trade Agreement between the Government of Canada and the Government of the Commonwealth of Australia, signed at Canberra Feb. 12, 1960.
Transportation—	
19 June 9	<i>The Nanaimo Harbour Commissioners Act</i> authorizes the establishment of a Corporation to manage and develop a harbour at the city of Nanaimo, B.C.
21 June 9	<i>The Oshawa Harbour Commissioners Act</i> authorizes the establishment of a Corporation to manage and develop a harbour at the city of Oshawa, Ont.

**Legislation of the Third Session of the Twenty-Fourth Parliament,
Jan. 14, to Aug. 10, 1960—continued**

Subject, Chapter and Date of Assent	Synopsis
Transportation—concluded	
22 June 9	<i>An Act to amend the Trans-Canada Highway Act</i> extends until Mar. 31, 1964 the period during which contributions or payments may be made to the provinces under the Act, and to Dec. 31, 1963 the period during which construction costs may be incurred; authorized maximum expenditure is increased by \$50,000,000 to \$400,000,000.
23 June 9	<i>An Act to amend the Windsor Harbour Commissioners Act</i> extends the boundaries of the Harbour of Windsor to include that part of the Detroit River extending to the International Boundary and fronting on the municipality of Ojibway.
25 July 7	<i>The Canadian National Railways Financing and Guarantee Act, 1960</i> provides moneys to meet certain capital expenditures of the CNR for the period Jan. 1, 1960 to June 30, 1961 and authorizes the guarantee of certain securities to be issued by the CNR.
26 July 7	<i>The Canadian National Toronto Terminals Act</i> authorizes the CNR to construct certain railway terminal facilities at and in the vicinity of Toronto at an estimated cost of \$87,000,000, and guarantees the principal of and interest on securities that may be issued to finance such construction.
33 July 7	<i>The LaSalle-Cauchonawaga Bridge Act</i> authorizes the Province of Quebec to construct and maintain a bridge across the St. Lawrence River from a point at or near the Town of LaSalle, Que., to a point at or near the Village of Cauchonawaga, Que.
35 July 7	<i>An Act to amend an Act to amend the Railway Act</i> extends for a three-year period to Jan. 31, 1961 the period of time during which reflective markings are to be placed on railway cars and other work carried out for public protection at level crossings. Under a previous amendment the time was extended for a three-year period to Jan. 31, 1958.
40 Aug. 1	<i>An Act to amend the Canada Shipping Act</i> implements an arrangement with the United States to co-ordinate the control of marine pilotage on the Great Lakes in the interests of safety.
42 Aug. 1	<i>An Act to amend the Freight Rates Reduction Act</i> extends for not more than nine months to Apr. 30, 1961, the period during which the revised rates under the Act are applicable and increases the authorized expenditure under the Act by an additional \$15,000,000 to \$35,000,000.
Welfare—	
34 July 7	<i>An Act to amend the Old Age Security Act</i> permits payment of pension in prescribed circumstances to pensioners absenting themselves from Canada beyond the periods previously prescribed, and provides also certain saving and transitional provisions to protect the rights of pensioners so absent on the date the amending legislation becomes effective.
36 July 7	<i>An Act to amend the War Veterans Allowance Act, 1952</i> permits the payment of the allowance to a recipient who leaves Canada, provides certain saving and transitional provisions to protect the rights of recipients so absent on the date of the amending legislation, and establishes residence qualifications for Imperial and Allied veterans who served during World War II.
Miscellaneous—	
9 Mar. 31	<i>An Act to amend the National Energy Board Act</i> makes two amendments to the Act, the first with respect to tolls on the transportation of gas within a province by an inter-provincial company and the second extending the date of expiry of licences for exportation of power issued under a repealed Act to allow sufficient time for Board hearings relating to the issue of new licences.
10 Mar. 31	<i>An Act to amend the National Housing Act</i> increases from \$4,000,000,000 to \$6,000,000,000 the aggregate maximum amount of insured loans, and increases from \$1,000,000,000 to \$1,500,000,000 the maximum amount that may be advanced or paid to the Corporation for specified purposes.
15 May 27	<i>An Act to repeal certain Fisheries Laws of Newfoundland</i> repeals certain Acts of that province which, under the Terms of Union, remained in effect until the Parliament of Canada otherwise provided. Since the Statutes of Canada relating to fisheries have now been brought into force in Newfoundland, the continuation of pre-Confederation Newfoundland fisheries laws is no longer necessary.

**Legislation of the Third Session of the Twenty-Fourth Parliament
Jan. 14, to Aug. 10, 1960—concluded**

Subject, Chapter and Date of Assent	Synopsis
Miscellaneous—conc.	
28 July 7	<i>An Act to amend the Emergency Gold Mining Assistance Act</i> extends the application of the Act to the years 1961, 1962 and 1963 and makes a minor administrative adjustment.
32 July 7	<i>The International Development Association Act</i> authorizes participation by Canada in the International Development Association and provides for the payment of the subscription required from Canada as a member, not to exceed the Canadian equivalent of U.S. \$37,830,000.
38 July 14	<i>An Act to amend the Public Service Superannuation Act</i> makes a number of revisions with respect to contributions, pensionable service, benefits, the calculation of annuities payable to widows and children, persons re-employed, medical examinations, transferred pensionable employees, contributions to the Retirement Fund and reciprocal transfer agreements, and with respect to certain other changes in connection with the administration of the Act.

PART V.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49; from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264; for 1954 in the 1955 Year Book, pp. 1329-1330; for 1955 in the 1956 edition, pp. 1233-1234; for 1956 in the 1957-58 edition, p. 1270; and for 1957 in the 1959 edition, p. 1240. References regarding federal and provincial elections or changes in legislatures or ministries are not included in the following listing but may be found in Chapter II on Constitution and Government and in the Appendix.

1958. Jan. 1, Celebrations to commemorate British Columbia's centennial year began. Jan. 16, Hon. Lester B. Pearson chosen as national leader of the Liberal Party at convention in Ottawa. Jan. 17, Royal Commission appointed to study dispute between the CPR and the Brotherhood of Locomotive Firemen and Enginemen, headed by Justice Kellock. Jan. 23, Queen Mother Elizabeth stopped briefly in Montreal and Vancouver on round-the-world tour. Feb. 1, United States Army successfully launched first American earth satellite—*Explorer*. Feb. 4, Kellock Royal Commission declared that firemen were unnecessary on diesel engines used by the CPR in its freight and yard operations. Feb. 17, Rt. Hon. Louis S. St. Laurent, Prime Minister of Canada from 1948-1957, announced his retirement from active politics. Apr. 5, Ripple Rock in Seymour Narrows near Campbell River, B.C., worst underwater shipping hazard on the West Coast, removed by underwater explosion. Apr. 30, Celebration in Montreal of the 300th anniversary of the first school established in that city by Marguerite Bourgeoys in 1658. May 28-June 4, President Theodor Heuss of the Federal Republic of Germany made state visit to Canada, the first German Head of State ever to do so. June 12, Prime Minister Macmillan of the United Kingdom addressed a joint session of the Senate and the House of Commons during a visit to Ottawa. June 21-July 9, Celebrations in Quebec City marking the 350th anniversary

on July 1 of its founding in 1608 by Samuel de Champlain. July 1, Canadians celebrated the 91st anniversary of Confederation. Blasting of the cofferdam holding back the waters of the St. Lawrence River touched off the creation of the 100-sq. mile St. Lawrence power pool, permitting, within a few days, the operation of the first generators of the new hydro development and the use of two seaway locks on the U.S. side of the River and of the Canadian seaway lock at Iroquois. Inauguration of Canada's new microwave relay system, completed from coast to coast. Federal-Provincial Hospital Plan went into effect in British Columbia, Alberta, Saskatchewan, Manitoba and Newfoundland. July 5, Stephen Leacock Memorial Home at Orillia, Ont., officially opened. July 8-11, President Eisenhower of the United States in Ottawa for discussions that resulted in the establishment of a joint Canada-United States Cabinet Committee on defence. July 12-Aug. 11, Princess Margaret toured Canada from Victoria to Halifax, visiting seven provinces on her first North American visit. July 13, External Affairs Minister Sidney Smith in Washington for talks with British Foreign Secretary Selwyn Lloyd and United States Secretary of State John Foster Dulles regarding the tense Middle East situation. July 19-23, Prime Minister Nkrumah of Ghana, visited Montreal and Ottawa and addressed a joint sitting of the Senate and the House of Commons. July 25, The Government of Canada signed the agreement previously ratified by the Government

- of Saskatchewan which authorized commencement of construction work on the South Saskatchewan River Project. *Aug. 20*, The Canadian Board of Geographical Names decided on "Lake St. Lawrence" as the name for the new 35-mile-long lake created by hydro power development on the St. Lawrence River. *Sept. 1-5*, Eighth Quinquennial Congress of the Universities of the British Commonwealth held in Montreal—its first meeting outside the United Kingdom. *Sept. 5*, The Robert H. Saunders Powerhouse officially opened by Canadian and American dignitaries. *Sept. 7*, World Power Conference opened in Montreal attended by 1,200 delegates from 51 countries. *Sept. 11*, Death of Camillien Houde, seven times mayor of Montreal. *Sept. 15-26*, Commonwealth Trade and Economic Conference held in Montreal. *Sept. 16*, External Affairs Minister Sidney Smith headed Canada's delegation to the 13th General Assembly of the United Nations in New York. *Oct. 1*, Canada House in New York City formally opened at a ceremony presided over by External Affairs Minister Sidney Smith, Mayor Robert Wagner of New York and the Hon. Ray Lawson. *Oct. 11-13*, Prime Minister Walter Nash of New Zealand in Ottawa to confer with Prime Minister Diefenbaker. *Oct. 15*, Mrs. Golda Meir, Israeli Foreign Minister, in Ottawa to confer with Canada's Prime Minister and Minister of External Affairs. *Oct. 22*, Miss Blanche Margaret Meagher appointed Ambassador to Israel, the first Canadian woman in an ambassadorial post. *Oct. 23*, Seventy-four lives lost in a coal mine explosion at Springhill, N.S.; 81 men were rescued the first day, 12 on Oct. 30 and seven on Nov. 1. *Oct. 25*, An explosion, attributed to gas leakage, caused extensive damage in downtown Ottawa. *Oct. 28-31*, Prince Philip visited Ottawa to attend the Conference of the English-Speaking Union of which he is President. *Oct. 28-Dec. 19*, The Prime Minister, accompanied by Mrs. Diefenbaker, toured European and Commonwealth countries. *Dec. 31*, Trade Union Local 2-254 of The International Woodworkers of America struck against its employer, the Anglo-Newfoundland Development Company, following the latter's rejection of the recommended wage increase by a Conciliation Board under the Newfoundland Labour Relations Act. When violence accompanied the strike, the Newfoundland Government with the unanimous support of the Assembly enacted the Trade Union (Emergency Provisions) Act of 1959, decertifying the two locals (2-254 and 2-255) of the IWA, and announced the organization of a rival union.
- 1959.** *Jan. 1*, Federal-Provincial Hospital Plan went into effect in Ontario and Nova Scotia. *Feb. 20*, Production of the *CF-105 Arrow* discontinued. *Feb. 23*, Celebration of the 50th anniversary of flight in Canada at Bras d'Or Lake, N.S., scene of the first "Silver Dart" flight. *Mar. 17*, Death of Dr. Sidney Earle Smith, Minister of the Department of External Affairs. *Mar. 18*, Prime Minister Macmillan of the United Kingdom arrived in Ottawa for discussions on the situation in Germany, following talks in Russia and France and en route to Washington. *Apr. 10*, Canada's first privately owned and operated nuclear research reactor officially opened at McMaster University. *Apr. 25*, The St. Lawrence Seaway opened to navigation. *Apr. 26*, Premier Castro of Cuba visited Montreal. *May 20*, Prime Minister Menzies of Australia visited Ottawa. *June 5-10*, The Atlantic Congress, consisting of over 600 Parliamentarians and distinguished citizens from NATO countries met at London, Eng., to examine the record of the first ten years of NATO and discuss prospects for the next ten years; 60 Canadian delegates attended. *June 18*, Her Majesty Queen Elizabeth and Prince Philip arrived at Torbay, Nfld., to begin a 45-day coast-to-coast tour of Canada. *June 20*, Thirty-five fishermen lost their lives in a violent storm in Northumberland Strait. *June 26*, The St. Lawrence Seaway officially opened by Her Majesty Queen Elizabeth and President Eisenhower of the United States in a historic ceremony at St. Lambert, Que. *July 1*, Federal-Provincial Hospital Plan went into effect in New Brunswick. *July 2*, Japan and Canada signed pact pledging co-operation in the peaceful uses of atomic energy. *July 9*, Canadian Brotherhood of Railway, Transport and General Workers was declared by the Canadian Labour Relations Board the bargaining agent of a system-wide unit of operating and maintenance employees of the St. Lawrence Seaway Authority. *July 15-22*, A Canadian delegation, headed by the Hon. George Drew, attended the Commonwealth Education Conference in Oxford, England, implementing the program proposed by Canada at the Commonwealth Economic Conference held at Montreal in September 1958. *July 17*, The Canadian Government announced the creation of an Emergency Measures Organization to function in the event of a sudden nuclear war. *July 18*, The Canadian Government announced the creation of a five-man National Energy Board to have wide powers over the oil and natural gas industries and international electric power connections. *July 22*, Official opening of the Queen Elizabeth Power Generating Station (Saskatchewan Power Corporation) at Saskatoon by Her Majesty Queen Elizabeth. *Aug. 1*, The Federal Cabinet met in Halifax, N.S., to bid farewell to Her Majesty Queen Elizabeth and Prince Philip who left by air for London, England. *Aug. 17*, Northern Affairs Minister Hamilton announced the discovery of oil at Eagle Plain, Yukon Territory—the first such discovery in the Yukon. *Sept. 7*, Death of Maurice Duplessis, Premier of Quebec Province for the past 18 years, at Schefferville, Que. *Sept. 9*, Announcement that Canada's first large nuclear power station will be built on the shores of Lake Huron, nine miles north of Kincardine at an estimated cost of \$60,000,000. *Sept. 10*, The Hon. Paul Sauvé chosen to succeed the late Maurice Duplessis as Premier of the Province of Quebec. *Sept. 13*, Two-hundredth anniversary of the battle of the Plains of Abraham. *Sept. 16*, Major-General George P. Vanier, D.S.O., M.C., C.D., appointed Governor General of Canada to succeed the Rt. Hon. Vincent Massey; investiture took place in the Senate. Fourteenth session of the General Assembly of the United Nations opened in New York. *Sept. 22*, Dr. Wilder Penfield, Director of the Montreal Neurological Institute and Dr. E. W. R. Steacie, Chairman of the National Research Council, received diplomas of membership in the Academy of Sciences of the U.S.S.R., the first Canadians so honoured. *Sept. 24*, External Affairs Minister Green, head of the Canadian Delegation at the UN General Assembly, presented Canada's views on major world problems, particularly with respect to disarmament and the need for a world program on radiation hazards. *Sept. 28*, Death of A. R. Mosher, Honorary

President of the Canadian Labour Congress and chief founder of the Canadian Brotherhood of Railway Employees in 1907. *Oct. 1*, Federal-Provincial Hospital Plan went into effect in Prince Edward Island. *Oct. 5*, John A. MacAulay of Winnipeg elected Chairman of the Board of Governors of the International Red Cross, the first Canadian to be named to the post. *Oct. 6*, Prime Minister Diefenbaker announced grant of \$20,000 to the Japanese Red Cross Society for relief of typhoon victims. *Oct. 15-16*, Dominion-Provincial Conference held in Ottawa; provincial demands for an immediate increase in tax-sharing payments from the Federal Government rejected. *Oct. 22*, Hearings by the Royal Commission on Transportation began in Quebec City. *Nov. 4*, Alberta Government announced a provincial order banning the use of trading stamps and similar promotional schemes. Agreement on exchange of science experts signed in Moscow by the President of the National Research Council of Canada and the President of the Soviet Academy of Science. *Nov. 6*, Canadian Government announced new program extending to Nov. 30, 1966, the period in which approximately \$1,000,000,000 in uranium, undelivered to date under contract, can be produced; this program resulted from the decision of the U.S. Atomic Energy Commission and the U.K. Atomic Energy Authority not to exercise their options to buy beyond Mar. 31, 1963. *Nov. 9*, United Kingdom removed most of the remaining wartime restrictions on foreign imports, except those from Japan and Communist-bloc members; the removal is of special importance to Canadian manufacturers. *Nov. 12*, Douglas J. Mackintosh, Granum, Alta., won title of World Wheat King at Royal Winter Fair, Toronto. *Nov. 16*, Premier Frost of Ontario cut sod for extension of Toronto's subway. *Nov. 17*, Agreement reached with the Soviet bloc on a Canadian proposal for a world-wide study on atomic radiation. *Nov. 18*, Deputy Premier Anastas Mikoyan of U.S.S.R. arrived in Halifax by air for overnight visit en route to Mexico. Polish Legation announced agreement to buy additional wheat and barley on three-year credit terms, bringing total grain purchases from Canada in 1959 to more than \$30,000,000. Board of Broadcast Governors announced TV programs must have 45 p.c. Canadian content from Apr. 1, 1961 and 55 p.c. from Apr. 1, 1962. *Nov. 20*, Long-standing problem of federal grants to Quebec universities solved in agreement reached between Federal and Quebec Governments. *Nov. 26*, Indians in N.W.T. placed on equal basis with white persons in liquor purchase. *Nov. 25*, Prof. Donald C. Creighton, University of Toronto, named member of the Monckton Commission (U.K.) to investigate the constitutional development of the Federation of Rhodesia and Nyasaland. *Dec. 2*, Six governors of York University named, marking the official birth of Ontario's tenth university; Dr. Murray G. Ross, Vice-President of the University of Toronto, appointed President on Dec. 3. Ernest L. Bushnell announced resignation as CBC Vice-President. *Dec. 15*, Arrival by air in Toronto of the first group of European tubercular refugees and their families, part of Canada's share in World Refugee Year. *Dec. 16*, Death of J. J. Bowlen, Lieutenant-Governor of Alberta. *Dec. 17*, National Housing Act mortgage interest rate raised to 6½ p.c. from 6 p.c. *December*, Lieut.-Gen. E. L. M. Burns leaves command of the UN Emergency Force

in the Middle East to serve as Canadian representative on the Ten-Nation Disarmament Committee.

- 1960.** *Jan. 1*, Discrimination against dollar imports into Finland ended. Toll charge of \$64 introduced for each aircraft flying an international route over Canada to cover cost of providing them with navigational aids. *Jan. 2*, Death of Hon. Jean-Paul Sauvé, Premier of Quebec for 114 days. *Jan. 4*, Willis Rodney Whitney Award presented to Dr. Morris Cohen of the National Research Council by the U.S. National Association of Corrosion Engineers for outstanding scientific achievement in corrosion. *Jan. 6*, Charles F. Comfort, mural painter and Canadian Army artist in the Second World War, named Director of the National Gallery, succeeding Alan Jarvis. *Jan. 7*, Antonio Barrette, former Quebec Labour Minister, became Premier of Quebec. *Jan. 8*, Her Majesty Queen Elizabeth approved appointment of Princess Alexandra of Kent as Colonel-in-Chief of the Queen's Own Rifles of Canada. *Jan. 19*, Announcement made that Canada's second nuclear research centre, to be known as the Whiteshell Nuclear Research Establishment, will be built on the east bank of the Winnipeg River and 60 miles northeast of Winnipeg. Canada meeting India's request for \$25,000,000 worth of Canadian commodities and equipment under the Colombo Plan. *Jan. 21*, Prime Minister Kishi of Japan visited Ottawa; trade relations were the central theme of discussions with Prime Minister Diefenbaker and members of the Cabinet. *Jan. 30*, Discrimination against dollar imports in favour of OEEC countries of Europe ended by Denmark. *Feb. 3*, Announcement that Canada will contribute \$25,000,000 toward the building of a transpacific cable as part of a world-girdling Commonwealth communication system. *Feb. 7*, Death of Dr. Robert Hamilton Coats, founder of the Dominion Bureau of Statistics and Dominion Statistician from 1918-42. *Feb. 8*, Federal-provincial conference on centennial celebrations agreed to support an application by the City of Montreal for a World Fair in that area in 1967. Her Majesty Queen Elizabeth announced that future generations of her family, except those in direct line to the Throne, will bear the surname Mountbatten-Windsor. *Feb. 9-10*, A conference between the Federal Government and the British Columbia Government ended in agreement on plans for the development of the Columbia River. *Feb. 17*, New National Gallery of Canada officially opened by Prime Minister Diefenbaker. *Feb. 19*, A second son was born to Her Majesty Queen Elizabeth II and Prince Philip—named on Mar. 22 Prince Andrew Albert Christian Edward. *Feb. 26*, Quebec Legislative Council approved an amendment to a government Bill providing Quebec universities with the means of accepting the \$41,000,000 in federal grants being held in trust in Ottawa. Engagement of Her Royal Highness Princess Margaret to Antony Armstrong-Jones announced by Queen Mother Elizabeth. Anne Heggveit of Ottawa won the women's slalom at Olympic Games in Squaw Valley, California—the first Canadian to win an Olympic gold medal for skiing; the victory also gave her the world combined title and the world slalom title. Barbara Wagner and Bob Paul of Toronto won the Olympic gold medal in pairs competition in figure skating. Donald Jackson of Oshawa won bronze medal for

third-place finish in men's figure skating. *Feb. 29-Mar. 2*, Premier Segni of Italy visited Canada. *Mar. 2*, World figure skating championships opened in Vancouver; Barbara Wagner and Bob Paul, Toronto, were pairs title winners for fourth consecutive year. Extension of Federal Government's sponsorship of tubercular refugees beyond the 100 families already brought to Canada announced by External Affairs Minister Green. *Mar. 8*, Four 1959 winners of the Governor General's awards for literature announced by Canada Council—Hugh MacLennan, English fiction; Irving Layton, English poetry; André Giroux, French fiction; and Rt. Rev. Felix-Antoine Savard, French non-fiction. *Mar. 16*, The UN Ten-Nation Disarmament Committee began negotiations. *Mar. 16-18*, Dr. Horacio Lafer, Brazil's Secretary of State for External Relations, visited Ottawa. *Mar. 28*, Assent given by the Ontario Legislature for the incorporation of a non-denominational bilingual university at Sudbury to be known as Laurentian University. *Apr. 1*, National Energy Board recommendations for export of natural gas to the U.S. approved by the Federal Government. *Apr. 11*, Death of James Muir, Chairman and President of the Royal Bank of Canada. Canadian newspaperman Norman Phillips, released after detention by police following filing of his news story of racial disturbances in South Africa. *Apr. 18*, President de Gaulle of France, accompanied by Mme. de Gaulle, arrived in Ottawa for a four-day state visit to Canada. Canada and the Soviet Union signed a three-year trade agreement under which the U.S.S.R. will spend \$2 in Canada for every Canadian dollar spent in Russia, the U.S.S.R. promising to buy \$25,000,000 worth of goods every year. *Apr. 21*, Prime Minister Diefenbaker and Mrs. Diefenbaker left Ottawa by air for Mexico City as guests of Mexican President and Señora Lopez Mateos. *Apr. 22*, Field Marshall Viscount Montgomery arrived in Ottawa for a four-day visit. *Apr. 27*, The first Canadian Histadrut Humanitarian Award presented to Claude Jodoin President of the Canadian Labour Congress. External Affairs Minister announced a \$15,000,000 Colombo Plan contribution to Pakistan. *Apr. 30*, Hundredth anniversary of the Queen's Own Rifles of Canada. *May 3*, The ninth conference of Commonwealth Prime Ministers opened in London; Canada requested that the Conference consider the possibility of setting up a Colombo Plan for aid to Africa. *May 6*, Her Royal Highness Princess Margaret and Antony Armstrong-Jones married in Westminster Abbey. *May 16*, Big Four Summit Conference opened in Paris. *May 17*, Summit meeting failed as a result of U-2 aircraft incident. *May 27-28*, His Majesty King Mahendra Bikram Shah Deva of Nepal paid an official visit to Ottawa as part of a North American tour. *June 6*, World Trade Conference opened in Toronto with address by Transport Minister Hees. *June 30*, New Ottawa Airport officially opened by Prime Minister Diefenbaker. *July 1*, Belgian Congo becomes a republic, starting a period of unrest and violence over the withdrawal of Belgian military forces and internal leadership. *July 10*, Roger Woodward, 7, survived 167-foot drop over Niagara Falls after boating accident. *July 11*, The Northwest Territories Council convened at Resolute Bay, the most northerly assembly point for any legislative body in the world. *July 12-13*, Meeting at Ottawa of Canada-United States Cabinet Defense

Committee to consider all aspects of North American defence. *July 16*, UN troops arrive in terror-haunted Congo. *July 23*, Her Majesty Queen Elizabeth awarded the Rt. Hon. Vincent Massey, former Canadian Governor General, the Royal Victorian Chain as "a mark of the highest distinction and special favour". *July 25-27*, Federal-Provincial fiscal conference, attended by Premiers of all provinces, set up basis for further discussions on constitutional amendment and tax issues. *Aug. 4*, Bill of Rights approved by House of Commons. Announcement that Her Majesty Queen Elizabeth signed an order formally giving the West Indies Federation full power of home rule beginning Aug. 16. *Aug. 10*, Independent-minded Congo province of Katanga agreed conditionally to admit UN troops. UN Security Council order for immediate replacement of Belgian troops in that area with units from UN forces already in Congo. *Aug. 11*, Establishment of a Medical Research Council similar to the National Research Council and vast expansion of the government's role in medical research approved by the Federal Government. Hazen Argue selected as national leader of the CCF Party. *Aug. 12*, Series of UNESCO conferences on adult education held at Toronto, Montreal, Ste. Agathe and Syracuse, N.Y.; representatives from 60 countries and 20 major international organizations attended. *Aug. 13*, First group of army signallers assigned to UN forces in the Congo left Canada for Leopoldville by air. *Aug. 16*, Cyprus attained independence and became the fourth republic within the Commonwealth. *Aug. 18*, Canadian servicemen manhandled by Congolese troops. Premier Lumumba of Congo apologized for incident Aug. 21. *Aug. 25*, Olympic Games opened in Rome; 72 Canadians to compete. *Aug. 30*, Announcement of a Canadian achievement in the field of Atomic energy—creation at Chalk River of a nuclear molecule. *Aug. 31*, Federal conciliation board recommendation of an hourly increase of 14 cents for a two-year contract accepted by representatives of labour unions bargaining for non-operational railway employees. *Sept. 8*, Agreement reached between Federal Government and authorities of Quebec and Ontario for a bridge spanning the Ottawa River to replace the Interprovincial Bridge between Ottawa and Hull, work to begin shortly. *Sept. 10*, New Halifax International Airport officially opened by Transport Minister Hees. *Sept. 14*, The Second Commonwealth and Empire Law Conference began in Ottawa, with addresses by Justice Minister Fulton and Chief Justice Patrick Kerwin. Former Premier of Quebec, Antonio Barrette, announced his resignation as leader of the Union Nationale party and as member of the Legislature. *Sept. 15*, Maurice (Rocket) Richard, hockey's all-time scoring leader, announced his retirement. *Sept. 16*, A three-man Royal Commission, headed by J. Grant Glasco, Toronto, was appointed to examine all aspects of the Federal Government. *Sept. 18*, National observance of 20th anniversary of the Battle of Britain held on Parliament Hill; a highlight of the ceremony was a performance by the famed Golden Hawks aerobatic team. An emergency session of the United Nations General Assembly began; the Congo issue and the policies of Secretary-General Dag Hammarskjöld were the main issues. *Sept. 19*, University of Alberta, Calgary, opened on a new 320-acre campus on the outskirts of the city; it

is an affiliate of the University of Alberta, Edmonton. *Sept. 20*, The 15th General Assembly of the United Nations opened attended by many heads of state including British Prime Minister Macmillan, Soviet Premier Krushchev, Canadian Prime Minister Diefenbaker, Prime Minister Nehru of India, President Nasser of the United Arab Republic, King Hussein of Jordan, President Tito of Yugoslavia, President Sukarno of Indonesia, Prime Minister Menzies of Australia, Prime Minister Nash of New Zealand, Premier Castro of Cuba. Thirteen new African countries and Cyprus were admitted to UN membership. *Sept. 21*, Canada will contribute \$22,100,000 over a 10-year period to an international fund for the development of the Indus River basin in

Pakistan—the largest irrigation scheme yet undertaken by man. *Sept. 23*, Rt. Hon. Vincent Massey, former Governor General of Canada and Chief Scout, laid a commemorative stone at the new Canadian Scout Headquarters in Ottawa. *Sept. 23*, Prime Minister Diefenbaker, in a powerful speech before the United Nations General Assembly, called on Russia to resume negotiations on disarmament and offered proposals to further world peace. *Sept. 27*, Prime Minister Diefenbaker cheered at Uplands Airport on his return from the United Nations General Assembly. *Sept. 28*, New bridge between Prescott, Ont., and Ogdensburg, N.Y., the "Seaway Skyway", officially opened with Governor Rockefeller of New York and Premier Frost of Ontario officiating.

PART VI.—STATISTICAL SUMMARY OF THE PROGRESS OF CANADA 1871-1959

Newfoundland entered Confederation in 1949 and figures for that province are included with Canadian statistics as they have become available. Under each item in the following Summary the inclusion of Newfoundland data for the first time is indicated by a black dot (•). If no dot is shown on any of the years from 1951-59 for a particular item, Newfoundland is excluded throughout. In some instances the symbol does not apply. Revisions of figures published in previous editions of the Year Book are not indicated in this Summary.

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

NOTE.—The interpretation of the symbols used in this table will be found facing p. 1 of this volume.
